

Draft Report on

Evolving a

National Statistical

Reporting Mechanism

for Social Progress

in the Country

Social Statistics Division,
Central Statistics Office,
Ministry of Statistics and Programme Implementation

Evolving a National Statistical Reporting Mechanism for Social Progress in the Country

INTRODUCTION

The Ministry in January 2015 had set up a Committee under the Chairmanship of Director General (CSO) to work out a mechanism for statistical monitoring of social development in the country. The Committee discussed the achievements and limitations of monitoring system of different ongoing schemes and also discussed about the social indicators covered under the Millennium Development Goal (MDG) and the proposed Sustainable Development Goals (SDG). After detailed discussion in its meeting, the Committee had proposed the following broad framework for monitoring Social Progress in India

- *Goal 1: Abolish Poverty in all its forms*
- *Goal 2: Universal education upto secondary level for both the genders.*
- *Goal 3: Empowerment and safety of women*
- *Goal 4: Conducive environment for children*
- *Goal 5: Pre-natal and anti-natal care for mother and infants*
- *Goal 6: Skill development amongst Youth*
- *Goal 7: Eradication of HIV/AIDS, Malaria, TB and other fatal diseases*
- *Goal 8: Accessibility to basic infrastructure*
- *Goal 9: Universal financial inclusion*
- *Goal 10: New technology in Agriculture and allied sectors*
- *Goal 11: Cleanliness and safe drinking water*
- *Goal 12: Welfare of deprived classes including minorities, disabled, aged and SC/ST*
- *Goal 13: Sustainable environment*
- *Goal 14: Comprehensive e-Governance*

As a follow up of the recommendations of this Committee, the Social Statistical Division (SSD) was entrusted with the task of evolving a reporting mechanism for social progress in the Country for the 14 goals as identified above. With the objective, an Inter-Ministerial Group was constituted with 19 social sector ministries as members. Two meetings of the group was held which was followed with a number of consultations (e-mail and telephonic correspondences, personal visits, etc.) with the nodal officers of the line ministries/ departments in order to obtain the final set of indicators and their data for the last five data

points. The division while obtaining indicators from the various data source agencies had also sought for data for last five data periods. The criteria adopted in indicator selection are,

- Relevance to the goal
- Simple and easy to understand
- Data availability

The data for the indicators proposed in the framework was collected mainly for

1. Ensuring the availability of data
2. Identifying the data source and periodicity of data availability
3. Brief analysis of the data to examine the various aspects of development as revealed by the selected indicators for presenting the status under each goal.

The proposed framework has 88 indicators under the 14 goals. These indicators and the data correspond to 19 Ministries/ Departments.

In the following sections, the status of progress (indicator wise) for each goal is presented. The proposed framework, data source agency, data frequency, corresponding Government Programmes etc. are shown in Appendix 1 and detailed data tables used in this report are at appendix 2.

HIGHLIGHTS

- At all India level, 21.9% of population are below poverty line which indicates one in every five persons in India is poor. In spite of the significant reduction in PHCR during this period, at all India level as well as rural – urban areas, the rural –urban gap persisted. In 2011-12, both in rural areas and urban areas, poverty was higher among ST group compared to SC group.
- The Labour Force Participation Rate (LFPR) is higher for males than females at all India level, and the same trend prevailed in rural and urban areas. As on 2013-14, the LFPR for males is 74.4% whereas the same for females is 25.8% all India level. At national level LFPR is at 52.5% in 2013-14 and LFPR is higher in rural areas compared to urban areas.
- As per NFHS 3 (2005-06), 48% of children under age five years are stunted (too short for their age), 19.8% of children under five years in the country are wasted (too thin for his or her height) 43% of children under age five years are underweight for their age. The rural India is witnessing more malnutrition among children < 5 years as higher percentage of stunted, wasted and underweight children were reported from rural areas. Higher is the percentage of underweight female children (< 5 years) than male children, whereas females are in a slightly better position compared to male children (< 5 years) while considering stunting and wasting.
- The Net Enrolment Ratio (NER) in Primary level of education is 88.08 per cent in 2013-14¹. The NER was higher for girls (89.26 per cent) than that for boys (87.2 per cent). In 2013-14, NER at Upper Primary, Elementary, Secondary and Higher Secondary was 70.2%, 88.31%, 45.63% and 30.43% respectively.
- The results from DISE report 2011-12, shows a steady increasing trend over the years in the estimate of the indicator ‘ratio of enrolment of Grade V to Grade I’ from 78.08 in 2009-10 to 86.05 in 2011-12.
- For 2012-13, the share of females in under graduation is 46.14%, whereas the status was at 41.64% in 2009-10. In 2012-13, among the females enrolled for undergraduate

¹The MDG India Country Report 2014 had quoted NER as 99.89 for 2010-11, based on DISE Flash Statistics 2011-12. The decline in NER in 2013-14 is attributed to the fact that, while calculating NER 2010-11, the projected 6 -10 child population was taken as 113.9 Million in 2010-11 based on 2001 census (as per ORGI estimates) whereas the actual 6-10 population as per 2011 census is 130.9 million. Therefore, the GER and NER for 2011 and thereafter declined when calculated based on actual child population as clarified by the M/o Human Resource Development.

courses, majority of them were studying Arts/Humanities/Social Sciences (46.23%), followed by Commerce (13.89%) and Science (13.19%).

- For 2012-13, the share of females in Post graduation is 48.95%, whereas the status was at 43.94 % in 2009-10. In post graduate level, during 2012-13, highest female enrolment was observed in Social Science (18.13%), followed by Science (14.26%) and Management (12.76%).
- Over the years, there is slight increase in the public expenditure on education as a percentage of GDP though the share is very low. In 2012-13, only 4.29% of GDP was spent on education.
- The literacy rate for 7+ years in urban areas is higher than rural areas for both males and females. The literacy rate of males in urban areas is 88.8% and for rural areas, it is 77.1%. The literacy rate for females in urban areas is 79.1% whereas the same for rural areas is 57.9%. It is worth mentioning that, though literacy rate (7+ years) among females is lower compared to males at national level, rural and Urban areas and also among SC & ST categories, during 2001- 2011, a considerable improvement in youth literacy rate among females was noticed for all these categories which in turn reduced the gap in male –female literacy rate. During 2001-2011, the male – female gap in literacy rate has been reduced to 16.3 points from 21.6 points at all India level. During this period, the male -female gap in literacy rate (7+ years) has been reduced both in rural areas and urban areas, however, the gap is higher in rural areas.
- In 2011, at all India level, the male youth literacy rate is at 90% vis-à-vis female literacy rate of 81.8%, The literacy rate is higher for both male and female in SC category than ST category. During 2001- 2011, there is an increase of 6 percentage points and 14 percentage points in the literacy rate male and female respectively at the national level. For the SC category, the increase in male literacy rate was 9 percentage points and the same for females was 21 percentage points during this period. The ST category witnessed an increase of 11 percentage points in male youth literacy rate whereas the increase was 20 percentage points for females. The literacy rate for youth in urban areas is higher than rural areas for both males and females. The literacy rate of males in urban areas is 92.6% and for rural areas, it is 88.8%. The literacy rate for females in urban areas is 90% whereas the same for rural areas is 78%.

- In the 16th Lok Sabha, there are 62 women members, which is 11.42% of the total seats.
- In 2013, in the total police force, only 7.5% are women.
- During the last five years, the Crime Rate against women has increased alarmingly from 37.2% in 2010 to 75.6% in 2014.
- At all India level in 2009, 61% of one year old children have received full immunisation, In the SC, ST category the proportion of children 12-23 months received full immunisation are 58.9% and 49.8% respectively. The Coverage Evaluation Survey (CES) estimates the proportion of one year old children immunised against measles at 74% in 2009. There is also a rural-urban gap in the coverage of measles immunisation as in the rural areas the coverage is 72% as compared to 78% in the urban areas. The coverage of measles immunisation was nominally high in case of male children (74.8%) than female children (73.2%).
- As per SRS 2013, the U5MR is at 49 deaths per 1000 live births. In India, the rural areas, registered high U5MR compared to the urban areas. As per the latest SRS data, in 2013, the U5MR in rural and urban areas are 55 and 29 deaths per 1000 live births respectively. Also, Under Five Mortality Rate is higher for females than males at all India level and this is true for both rural and urban areas. The gap between female U5MR and male U5MR was higher in rural areas. As per the latest SRS data, in 2013, at all India level, the U5MR for female and male children are 53 and 47 deaths per 1000 live births respectively. In 2013, in rural areas, U5MR was 59 for females whereas for males it was 51 and in urban areas, U5MR is 30 for female children and 28 for male children.
- The Sample Registration System 2013 reveals that in India 12.4% of the total deaths were infant deaths. Significant decline in IMR has been observed both in rural and urban areas over years. However, IMR in the rural areas continues to be at a much higher level than the urban IMR. Although the rural urban gap is slowly decreasing, the latest data show that even in 2013 the rural - urban gap in IMR is significant (rural IMR: 44, urban IMR: 27). It is seen that IMR is more for female babies than male babies and in 2013, female IMR is at 42, whereas male IMR is 39 per 1000 live births.
- Though, the overall sex ratio of the Country is showing a trend of improvement, the child sex ratio is showing a declining trend, which is a matter of concern. During the

period 1991 -2011, child sex ratio declined from 945 to 914, whereas the overall sex ratio showed an improvement from 927 to 940.

- At the National level, the neo-natal mortality rate is 28 and ranges from 15 in urban areas to 31 in rural areas. The percentage of neo-natal deaths to total infant deaths is 68.0 per cent at the National level and varies from 56.4 per cent in urban areas to 69.9 per cent in rural areas.
- The maternal mortality ratio is the number of women who die from any cause related to or aggravated by pregnancy or its management during pregnancy or child birth or within 42 days of termination of pregnancy, irrespective of duration and site of pregnancy per 1,00,000 live births. The Sample Registration System shows, MMR has reduced from 301 in 2001-03 to 167 in 2011-13.
- Deliveries to be attended by skilled health personnel is a criteria, which can greatly ensure safe delivery. The Coverage Evaluation Survey (2009), shows, at national level 76.2% deliveries are attended by skilled health personnel and for the SC & ST category, the status is at 75% and 61.3%. Institutional deliveries is the best means to ensure deliveries to be attended by skilled health personnel and thereby leading to safe motherhood. At all India level, 72.9% deliveries are institutional deliveries, whereas among the SC and ST categories, the coverage is 71.3% and 57% respectively.
- Industrial Training Institutes (ITI) are training institutes which provide training in technical fields which leads to skill development. As on 2015-16, a total of 12106 ITIs (81% -Pvt, 19%- Govt.) are existing which have 1711156 seats are functioning in India. In 2014-15, there is 11% increase in ITIs and the seating capacity compared to the previous year.
- Awareness among youth population with comprehensive correct knowledge of AIDS is important in dealing with the disease. As per Behavioural Surveillance survey (2006), at all India level, 32.9% of population aged 15-24 years are with comprehensive correct knowledge of HIV/ AIDS.
- During 2010-2013, malaria incidence (Annual Parasite Incidence –API) and deaths have shown a declining trend, but in 2014 an increase has been recorded both for incidence and deaths. In 2014, the 89 malaria incidences were reported in 1 lakh population and nearly 5 in 1 Cr.population died of malaria.

- As per WHO estimates, in India Tuberculosis prevalence rate per one lakh population has reduced from 289 in 2009 to 211 in 2013 and the TB incidence rate reduced from 190 to 171 during 2009-2013. The TB mortality per one lakh population is also showing a declining trend and in 2013, 19 people per one lakh population died of TB.
- India has 79,116 km long National highways and 1,69,227 km State highways. During 2014-15, 36,337km rural road was completed under PMGSY connecting 10830 habitations.
- At national level, the total number of telephone (wireless + wireline) subscribers is 996.13 millions with 580.05 million urban subscribers and 416.08 million rural subscribers as on 31/3/15. The immense progress in the penetration of wireless telecommunication has led to the present progress in telecommunication. The total number of wireline subscribers is 26.59 million (3%) and wireless subscribers is 969.54 million (97%) at all India level as on 31/3/15. Out of the 26.59 million wireline subscribers, 21.47 million (80.74%) is in urban areas, whereas 5.12 million (19.26%) is in rural areas. Out of the 969.54 million wireless subscribers, 558.58 million (58.23%) is in urban areas, whereas 410.96 million (41.77%) is in rural areas.
- As on 31/3/15, there are 99.2 million broadband subscribers in India. The year to year increase in the number of broadband subscribers is 62.97%.
- There are 12 major ports in India and all of them handled Cargo during 2014-15, and there are 200 non –major ports in India, of them, 69 ports had handled cargo in 2013-14.
- Under PMJDY, as on 1/1/15, out of 12.55 Cr bank accounts opened at national level, 9.8 Cr were in Public Sector Banks (79%), 2.2 Cr in Rural Regional Bank (17%) and 5.2 Cr (4%) in Private Banks. Around 7.5 Cr accounts were opened in urban areas and 5 Cr. in rural areas. Out of the 12.5 Cr accounts opened under PMJDY, 67.32% are accounts with zero balance.
- In 2012-13 92.58 Million Hectares of cropped area are under irrigation and 101.82 Million Hectares of cropped area are rain –fed.
- As on 1-4-2015, the Rural Drinking Water Supply Programme has covered 71.22% of the Rural population. As per NSS 2012, 87.8% households at national level have access to

improved water source. In Urban areas, 90.1% households and in rural areas, 86.9% households are having improved source of drinking water.

- In 2012, 43.4% households at all India level have no access to sanitation facilities and the status in rural and urban areas are 59.4% and 8.8% respectively. This indicates that, in rural areas, there is still scope and need for a lot of improvement towards achieving basic sanitation facility to all.
- The issues related to the slums and slum population and improving the living conditions of slum dwellers are major challenges being faced by the nation today. The Census 2011 revealed that, 17.4% of the urban population is living in slums.
- In 2014-15, there is an increase of 12.15% in the number of SC students availing post metric scholarship and there are nearly 56 lakh SC students availing this facility.
- India has a recorded Forest area of 771821 Sq.km in 2013, showing slight improvement over the previous year status.
- In 2013, there is 4628 sq.km of mangrove cover in India. During 2003 -2011, there was an increasing trend in the Mangrove cover, which was reversed in 2013.
- As on 31/6/15, around 1.42 lakhs Common Service Centres (CSCs) have been made operational across 36 States/UTs.
- As on 30/6/2015, about 1,43,863 employees have registered with the portal <http://attendance.gov.in/> and 579 organizations have on boarded the portal.

Towards Abolishing Poverty.....

Goal 1: Abolish Poverty in all its forms

For a vast Country like India, poverty is a major concern, as it acts as a main hurdle in development in all fronts. Elimination of extreme poverty and improvement in economic conditions of poor is of prime importance in advancing ahead. Hence, the Goal 1 is aimed at abolishing poverty in all its forms. The indicators proposed for this goal include the measures of poverty, employment and nutrition.

Poverty Head Count Ratio- Percentage of population living below national poverty line, differentiated by urban and rural and SC/ST wise :

The planning Commission (Now renamed as NITI Aayog) brought out Poverty Head Count Ratio (PHCR) using the consumption expenditure data from NSS Surveys. Following Tendulkar committee methodology, the percentage of persons living below the poverty line among social groups at all India level for the years 2004-05 and 2011-12 have been estimated. The poverty ratios among the social groups are estimated from the percentage distribution of persons of the respective social groups as obtained from the large sample survey consumer expenditure data of the NSS and the poverty line for all population. Though, the data disaggregated by Social Groups and Place of residence are available, the gender disaggregated data is not available for PHCR.

The data shows that, at all India level, 21.9% of population are below poverty line which indicates one in every five persons in India is poor. However, the PHCR showed a considerable decline during 2004-12, as it declined from 37.2% in 2004-05 to 21.9% in 2011-12. In spite of the significant reduction in PHCR during this period, at all India level as well as rural – urban areas, the rural –urban gap persisted. In 2011-12, both in rural areas and urban areas, poverty was higher among ST group compared to SC group.

The details of latest status of PHCR and the reduction during 2004-05 to 2011-12 are depicted as follows :

Source: Planning Commission (Now NITI Aayog)

Poverty gap ratio (MRP Consumption Distribution)

The Poverty Gap Ratio is the gap by which mean consumption of the poor below poverty line falls short of the poverty line. It indicates the depth of poverty; the more the PGR, the worse is the condition of the poor. While the number of poor people indicates spread of poverty, PGR indicates the depth. The data for this indicator is available for Rural and Urban areas, and reduction in PGR has been observed both in rural and urban areas during 2004-05 and 2011-12. Though PGR is higher in rural areas, compared to urban areas, the decline in terms of percentage points was more in rural areas during this period.

Source: Planning Commission (now NITI Aayog)

Share in national consumption for the poorest quintile class of MPCE (NSS)

The share of poorest quintile in national consumption is defined as the share of a country's national consumption or income that accrues to the poorest quintile (fifth) of the population. This indicator is expressed as a percentage. Poorest quintile is the bottom 20% of the population, ranked by income or consumption levels. The indicator provides information about the distribution of consumption or income of the poorest fifth of the population. Because the consumption of the poorest fifth is expressed as a percentage of total household consumption (or income), this indicator is a 'relative inequality' measure. In a situation of income or consumption being equally distributed, the expected share of the poorest quintile is 20%. However, the ground reality varies much from this ideal situation, as both in rural and urban areas, the share of poorest 20% in national consumption was less than 10% during 2009-2012, the share in rural areas was more than urban areas though a declining trend has been observed in rural areas.

Share in national consumption for the poorest quintile class of MPCE (NSS) (MRP method)

	2009-10	2011-12
Rural	9.75	9.6
Urban	7.11	7.2

Source: NSSO

Labour Force Participation Rate (LFPR)

Labour Force indicates the supply of labour in the country and is an important input for production of goods & services in any country. Persons who are either 'working' (employed) or 'seeking or available for work' (unemployed) or both during a major part of the reference period, constitute the labour force. Labour Force Participation Rate (LFPR) is defined as the number of persons in the labour force per 1000 persons.

LFPR based on UPS (Usual Principal Status -The activity in which a person spent relatively longer time (major time criterion) during the reference period is considered as the usual principal activity of the person) approach for persons aged 15 years & above based on Employment Unemployment Surveys (EUS) of Labour Bureau.

LFPR is higher in rural areas compared to urban areas, and at national level LFPR is at 52.5% in 2013-14. During 2011-14, the LFPR showed a decline in 2012-13, in rural, urban and all India levels, and then showed an increase.

Source : Labour Bureau

The LFPR is higher for males than females at all India level, and the same trend prevailed in rural and urban areas. As on 2013-14, the LFPR for males is 74.4% whereas the same for females is 25.8% all India level.

Source : Labour Bureau

Worker Population Ratio (WPR)

The WPR signifies the proportion of workers/employed persons in the total population.

The WPR is higher in rural areas compared to urban areas. As on 2013-14, the WPR at national level is at 49.9%. During 2011-14, the WPR showed a decline in 2012-13, in rural, urban and all India levels, and then showed an increase.

Source : Labour Bureau

The WPR is higher for males than females with a huge gap. However, during 2011-14, the WPR for males is showing a decreasing trend, whereas for females, a decline was observed in 2012-13, but then a hike was observed during 2013-14.

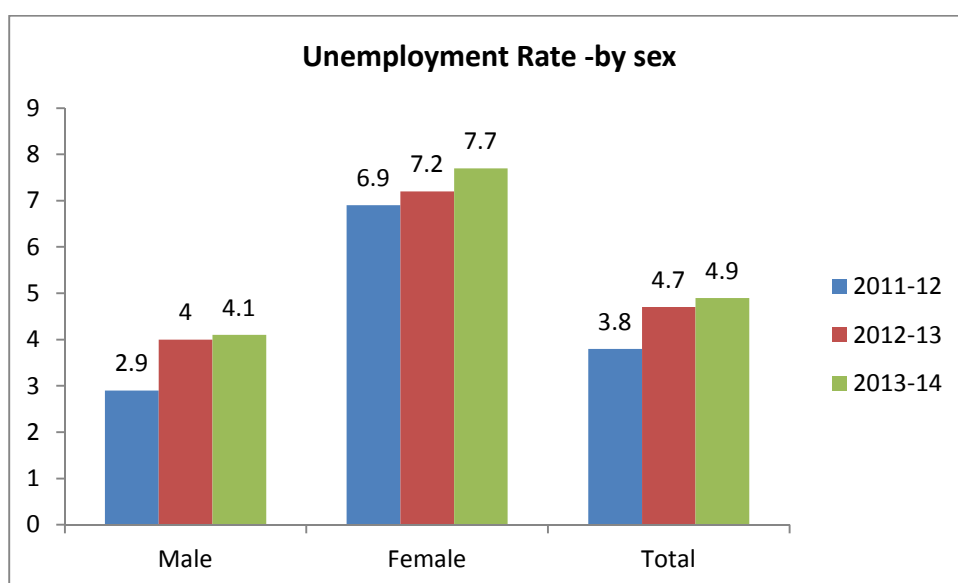

Source : Labour Bureau

Unemployment Rate (UR)

Unemployment Rate (UR) is defined as the number of persons unemployed per 1000 persons in the labour force (employed & unemployed).

During 2011-14, the unemployment rate is showing an increasing trend for males, females and at national level. In 2013-14, the Unemployment Rate was 4.9%, 4.1%, and 7.7% for all India, males and females respectively at national level.

Stunting, Wasting and Underweight in children

The following anthropometric indices are taken to assess the physical development of children.

- Height-for-age - inadequate Height-for-age indicate stunting
- Weight-for-height - inadequate weight-for-height indicate wasting
- Weight-for-age - inadequate weight-for-age indicate underweight

Height-for-age (stunting)

Children whose height-for-age is below minus two standard deviations (-2 SD) from the median of the reference population are considered short for their age (stunted) and are chronically malnourished. Children below minus three standard deviations (-3 SD) from the median of the reference population are considered to be severely stunted. Stunting reflects failure to receive

adequate nutrition over a long period of time. Height-for-age, therefore, represents the long-term effects of malnutrition in a population and does not vary according to recent dietary intake.

Weight-for-height (wasting)

The weight-for-height index measures body mass in relation to body length and describes current nutritional status. Children who are below -2SD from the median of the reference population are considered thin (wasted) for their height and are acutely malnourished. Wasting represents the failure to receive adequate nutrition in the period immediately preceding the survey and may be the result of inadequate food intake or a recent episode of illness causing loss of weight and the onset of malnutrition. Children whose weight-for-height is below -3 SD from the median of the reference population are considered to be severely wasted.

Weight-for-age (underweight)

Weight-for-age is a composite index of height-for-age and weight-for-height. It takes into account both acute and chronic malnutrition. Children whose weight-for-age is below -2 SD from the median of the reference population are classified as underweight. Children whose weight-for-age is below -3 SD from the median of the reference population are considered to be severely underweight.

The Percentage of children below 5 years classified as malnourished according to these three anthropometric indices of nutritional status in India as revealed by NFHS 3 (2005-06) is indicative of the significant malnourishment among Indian children. 48% of children under age five years are stunted (too short for their age) which indicates that, half of the country's children are chronically malnourished. Acute malnutrition, as evidenced by wasting, results in a child being too thin for his or her height. 19.8% of children under five years in the country are wasted which indicates that, one out of every five children in India is wasted. 43% of children under age five years are underweight for their age. Underweight status is a composite index of chronic and acute malnutrition.

Malnourishment in children below 5 year (%)² 2005-06

	Height for Age (Stunting)			Weight for Height (Wasting)			Weight for age (Underweight)		
	<-3SD (Severe)	-3SD to -2SD (Mod)	Total	<-3SD (Severe)	-3SD to -2SD (Mod)	Total	<-3SD (Severe)	-3SD to -2SD (Mod)	Total
ALL India	23.7	24.3	48.0	6.4	13.4	19.8	15.8	26.7	42.5

Source: National Family Health Survey, Ministry of Health and Family Welfare

Source: National Family Health Survey, Ministry of Health and Family Welfare

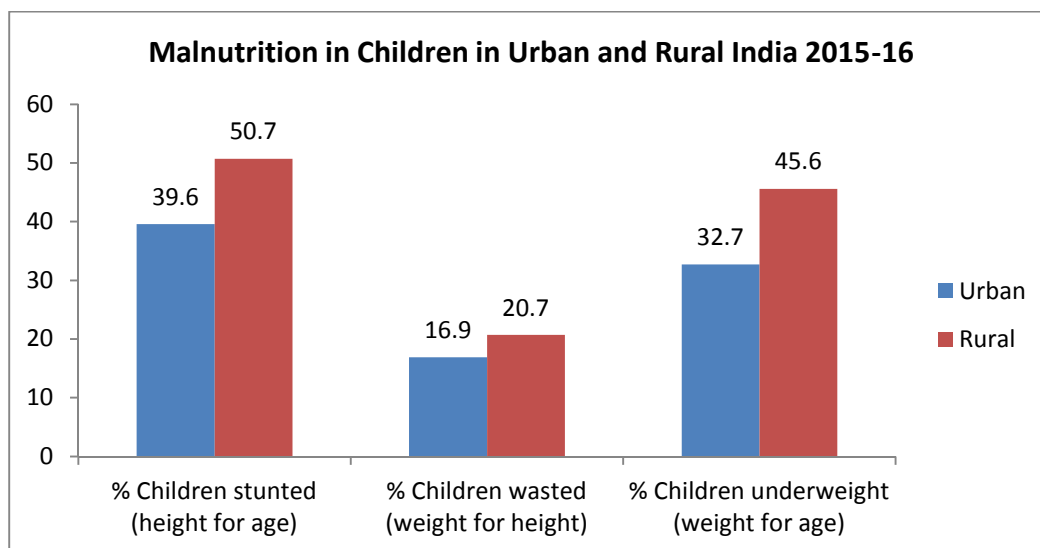

During the period between NFHS 2 (1998-99) & NFHS 3 (2005-06), decline has been observed for stunting and underweight among children under 3 years of age, whereas the percentage of children wasted has increased. However, it may be noted that, the degree of decline was very low for both categories of children (< 3 years) reported stunting and underweight as the per year decline were less than one percentage point in both cases. Further, the increase in the percentage of children wasted over years indicates a worsening situation, though the per year increase was less than one percentage point.

² (Each of these indices is expressed in standard deviation units SD, from the median of the 2006 WHO international reference population)

Nutritional status of children (< 5years) NFHS 3 (2005-06)		
	Male	Female
% Children stunted (height for age)	48.1	48
% Children wasted (weight for height)	20.5	19.1
% Children underweight (weight for age)	41.9	43.1

Higher is the percentage of underweight female children (< 5 years) than male children, whereas females are in a slightly better position compared to male children (< 5 years) while considering stunting and wasting.

The rural India is witnessing more malnutrition among children < 5 years as higher percentage of stunted, wasted and underweight children were reported from rural areas.

Source: National Family Health Survey , 2005-06, Ministry of Health and Family Welfare

Universal Education

Goal 2: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Education is one of the basic requisites for development and it leads to social and economic changes and open the doors for progress. Education is also a powerful tool for empowerment. The goal 2 of the framework aims at inclusive and equitable quality education and for promoting lifelong learning opportunities for all.

Net Enrolment Ratio (NER) at Primary/ Upper-Primary/ Secondary/ Senior Secondary levels, male-female and SC/ST wise

Net primary enrolment ratio is the ratio of the number of children of official school age (as defined by the national education system) who are enrolled in primary school to the total population of children of official school age. Based on the available data, the Net Enrolment Rate (NER) in primary education (age 6-10 years) was estimated at 84.5 per cent in 2005-06 (U-DISE). The NER in Primary level has increased to 88.08 per cent in 2013-14³. The NER was higher for girls (89.26 per cent) than that for boys (87.2 per cent).

In 2013-14, NER at Upper Primary, Elementary, Secondary and Higher Secondary was 70.2%, 88.31%, 45.63% and 30.43%.

Source: DISE, M/o HRD

³The MDG India Country Report 2014 had quoted NER as 99.89 for 2010-11, based on DISE Flash Statistics 2011-12. The decline in NER in 2013-14 is attributed to the fact that, while calculating NER 2010-11, the projected 6-10 child population was taken as 113.9 Million in 2010-11 based on 2001 census (as per ORGI estimates) whereas the actual 6-10 population as per 2011 census is 130.9 million. Therefore, the GER and NER for 2011 and thereafter declined when calculated based on actual child population as clarified by the M/o Human Resource Development.

In 2012-13, at Primary level, out of the total enrolment 20.24% are SC students and 11.28% ST students while in the Upper Primary level, the respective proportions are 19.38% and 9.8%.

Proportion of students starting from Grade 1 who reaches last grade of Primary/ Upper-Primary/ Secondary/ Senior Secondary levels

One of the goals of the Sarva Shiksha Abhiyan (SSA) has been to achieve universal retention by enabling children enrolled in Class I to complete eight years of elementary education. Universalisation of primary education addresses two major target groups, the out of school children during the primary school going age and the children who were forced to drop out even before completion of primary grade classes due to social and /or economic impediments. The investment made in terms of expansion of schooling facilities, bridging gender and social category gaps in elementary education, and quality improvement initiatives, including improved school infrastructure, enhanced teacher availability, sustained academic support, Mid-day meal programme, awareness generation, increased community participation, curricular reforms and a rights-based approach, have contributed substantially to reduction in drop-out rates and improved retention rates in primary, upper primary and elementary education.

The proportion of pupils starting grade 1 who reach grade 5, known as the survival rate to grade 5, is the percentage of a cohort of pupils enrolled in grade 1 of the primary level of education in a given school year who are expected to reach grade 5. The ideal result from a cohort study is at present not available in the official statistics of the country. Strengthening of the school information system has been accorded top priority from the very beginning of the Sarva Shiksha Abhiyan(SSA), as a result of which the coverage of DISE was extended to all states and districts of the country. The results from DISE report 2011-12, shows a steady increasing trend over the years in the estimate of the indicator 'ratio of enrolment of Grade V to Grade I' from 78.08 in 2009-10 to 86.05 in 2011-12.

Source: DISE, M/o HRD

Gender parity index of the enrolment ratio in Primary/ Upper-Primary/ Secondary/ Senior Secondary levels

The data shows that, there is almost gender parity in Primary, Upper primary levels of enrolment and is close to achieving gender parity in Secondary and Higher Secondary levels of education.

Year	Primary	Upper Primary	Secondary	Higher Secondary
2010-2011	0.94	0.94	0.87	0.84
2013-2014	0.93	0.95	0.9	0.89

Source: M/o HRD

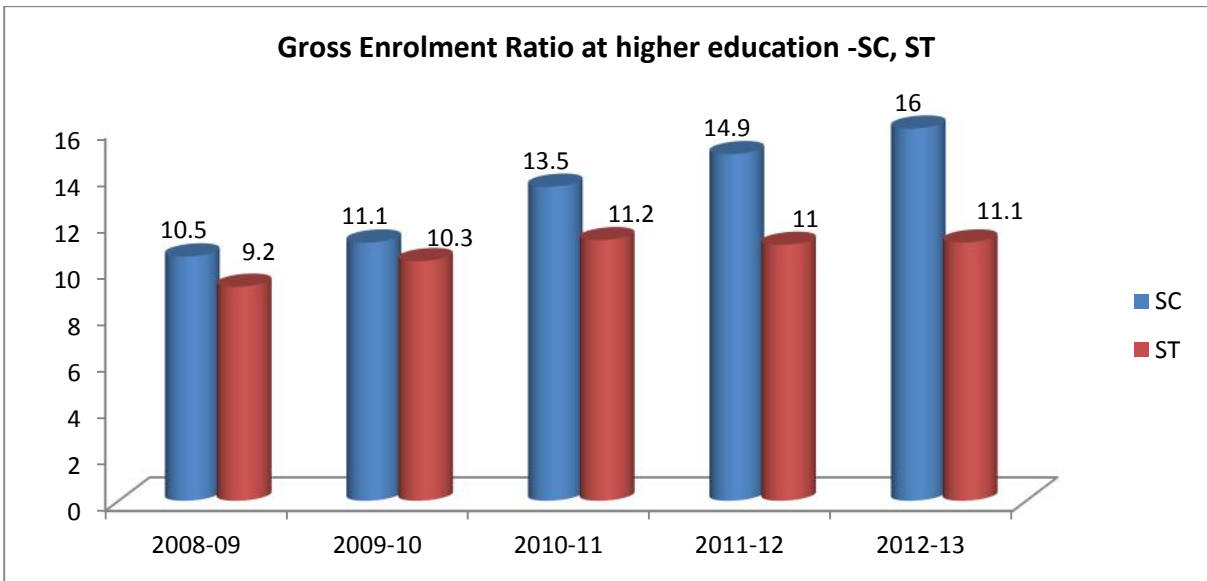

Gross Enrolment Ratio (GER) at higher education level (18-23 years), male-female and SC/ST wise

The GER at higher education is showing an increasing trend for both male and female. In 2012-13, the GER at higher education is 22.7%, 20.1% and 21.5% for male, female and total respectively.

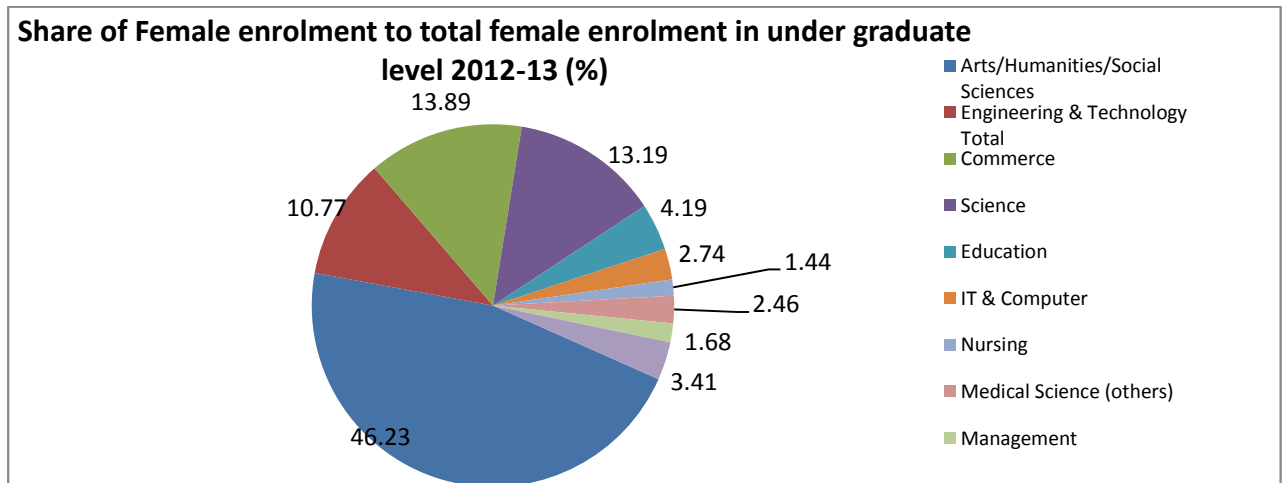

Source: M/o HRD

The Gross Enrolment Ratio at higher education is higher among SC category compared to ST category. In 2012-13, the GER at higher education was at 16% for SC category and 11.1% in ST category. In both SC and ST categories, higher GER is reported for males than females for higher education.

Source: M/o HRD

Enrolment at Under Graduate Level in Major Disciplines/ Subjects (based on actual response)
 For 2012-13, the share of females in under graduation is 46.14%, whereas the status was at 41.64% in 2009-10. In 2012-13, among the females enrolled for undergraduate courses, majority of them were studying **Arts/Humanities/Social Sciences (46.23%)**, followed by Commerce (13.89%) and Science (13.19%).

Source: M/o HRD

Considering discipline wise, the highest share of female enrolment in undergraduate courses was reported in home science (86.93%) followed by Fashion Technology (71.44%) in 2012-13.

Source: M/o HRD

In 2012-13, the share of females in under graduate Engineering Courses is highest in Architecture (51.78%) followed by Information technology (46.46%) and computer Engineering (45.11%)

In the medical field, the share of females in under graduate level was highest in nursing (84.7%) followed by general surgery (75.2%) during 2012-13.

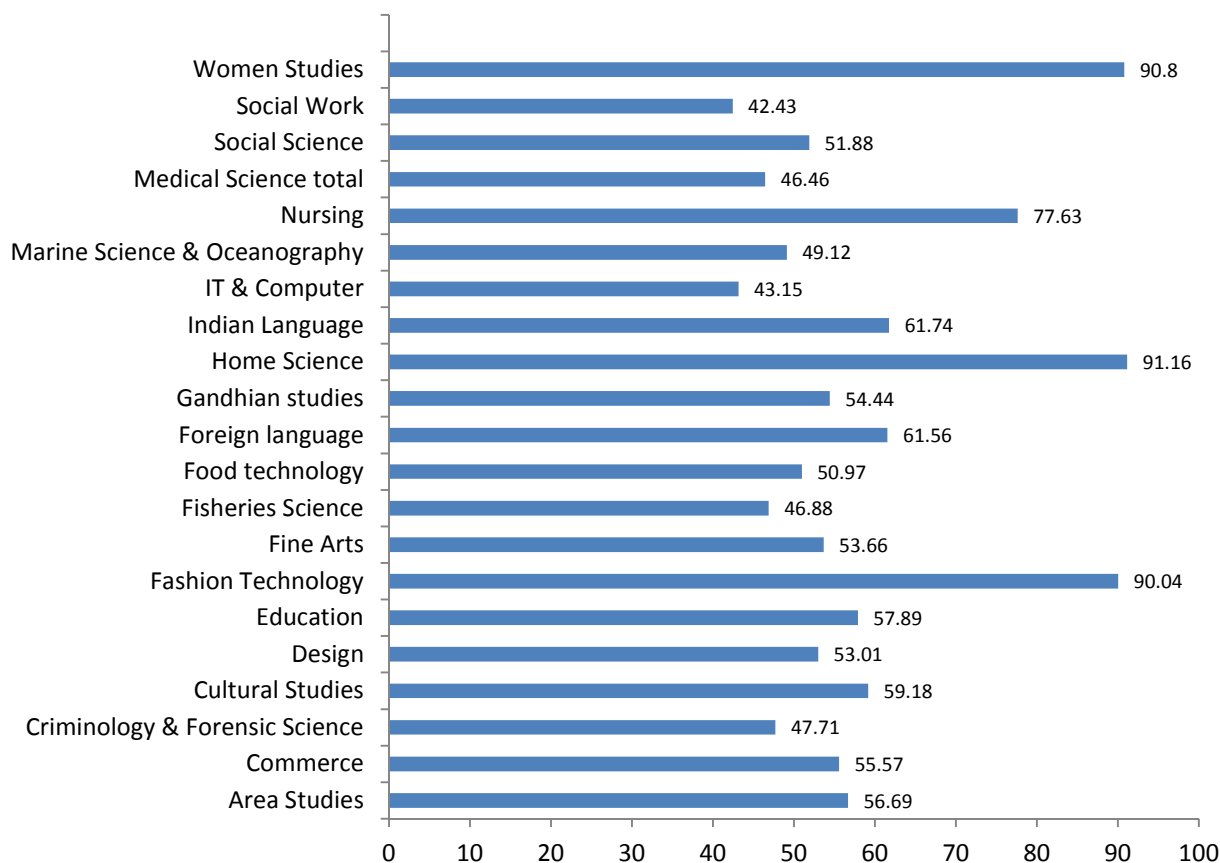

Enrolment at Post Graduate Level in Major Disciplines/ Subjects (based on actual response)

For 2012-13, the share of females in Post graduation is 48.95%, whereas the status was at 43.94 % in 2009-10. In post graduate level, during 2012-13, highest female enrolment was observed in Social Science (18.13%), followed by Science (14.26%) and Management (12.76%).

The status in some important disciplines where female share of enrolment is more or almost near to male share of enrolment in a discipline is depicted below.

Share of female enrolment to total enrolment -Some major Disciplines

Sector-wise (Estimated) public expenditure on education as a percentage of GDP

Over the years, there is slight increase in the public expenditure on education as a percentage of GDP though the share is very low. In 2012-13, only 4.29% of GDP was spent on education.

Estimated Public Expenditure on Education as a percentage of GDP

In 2012-13, the distribution of expenditure on education among different levels of education is as follows.

Distribution of estimated public expenditure on various levels of education

Literacy rate of 7+ year-olds, by sex, male-female and SC/ST wise

In India, a person aged 7 years and above who can both read and write with understanding in any language has been taken as literate. It is not necessary for a person to have received any formal education or passed any minimum educational standard for being treated as literate.

Rural:

In 2011, in rural areas, the male literacy rate is at 77.1% vis –a –vis female literacy rate of 57.9%, The literacy rate is higher for both male and female in SC category than ST category. During 2001- 2011, there is an increase of 7 percentage points and 12 percentage points in the literacy rate male and female respectively in the rural areas. For the SC category, the increase in male literacy rate was 9 percentage points and the same for females was 15 percentage points during this period. The ST category witnessed an increase of 10 percentage points in male literacy rate whereas the increase was 15 percentage points for females.

Literacy rate of 7+ year-olds, by sex, male-female and SC/ST wise -Rural

Urban:

In 2011, in urban areas, the male literacy rate is at 88.8% vis –a –vis female literacy rate of 79.1%, The literacy rate is higher for both male and female in SC category than ST category. During 2001- 2011, there is an increase of 3 percentage points and 6 percentage points in the literacy rate male and female respectively in the urban areas. For the SC category, the increase in male literacy rate was 5 percentage points and the same for females was 13 percentage points during this period. The ST category witnessed an increase of 5 percentage points in male literacy rate whereas the increase was 10 percentage points for females.

**Literacy rate of 7+ year-olds, by sex, male-female and SC/ST wise -
Urban**

In 2011, at all India level, the male literacy rate is at 80.9% vis –a –vis female literacy rate of 64.6%, The literacy rate is higher for both male and female in SC category than ST category. During 2001- 2011, there is an increase of 6 percentage points and 11 percentage points in the literacy rate male and female respectively at national level. For the SC category, the increase in male literacy rate was 8 percentage points and the same for females was 15 percentage points during this period. The ST category witnessed an increase of 10 percentage points in male literacy rate whereas the increase was 14 percentage points for females.

**Literacy rate of 7+ year-olds, by sex, male-female and SC/ST wise -
All India**

The literacy rate for 7+ years in urban areas is higher than rural areas for both males and females.

The literacy rate of males in urban areas is 88.8% and for rural areas, it is 77.1%. The literacy rate for females in urban areas is 79.1% whereas the same for rural areas is 57.9%.

Literacy rate 7+ years all India - by sex, by place of residence

It is worth mentioning that, though literacy rate (7+ years) among females is lower compared to males at national level, rural and Urban areas and also among SC & ST categories, during 2001- 2011, a considerable improvement in youth literacy rate among females was noticed for all these categories which in turn reduced the gap in male –female literacy rate. During 2001-2011, the male – female gap in literacy rate has been reduced to 16.3 points to 21.6 points at all India level. During this period, the male -female gap in literacy rate (7+ years) has been reduced both in rural areas and urban areas, however, the gap is higher in rural areas.

Trend in male -female gap in literacy rate (7+years)

Youth literacy rate of persons (15-24 years), by sex

Rural:

In 2011, for rural areas, the male youth literacy rate is at 88.8% vis –a –vis female literacy rate of 78%, The literacy rate is higher for both male and female in SC category than ST category. During 2001- 2011, there is an increase of 7 percentage points and 18 percentage points in the literacy rate male and female respectively in the rural areas. For the SC category, the increase

in male literacy rate was 10 percentage points and the same for females was 24 percentage points during this period. The ST category witnessed an increase of 11 percentage points in male youth literacy rate whereas the increase was 21 percentage points for females.

Urban:

In 2011, for urban areas, the male youth literacy rate is at 92.6% vis –a –vis female literacy rate of 90%, The literacy rate is higher for both male and female in SC category than ST category. During 2001- 2011, there is an increase of 2 percentage points and 6 percentage points in the literacy rate male and female respectively in the urban areas. For the SC category, the increase in male literacy rate was 4 percentage points and the same for females was 12 percentage points during this period. The ST category witnessed an increase of 4 percentage points in male youth literacy rate whereas the increase was 10percentage points for females.

All India:

In 2011, at all India level, the male youth literacy rate is at 90% vis –a –vis female literacy rate of 81.8%, The literacy rate is higher for both male and female in SC category than ST category. During 2001- 2011, there is an increase of 6 percentage points and 14 percentage points in the literacy rate male and female respectively at the national level. For the SC category, the increase in male literacy rate was 9 percentage points and the same for females was 21 percentage points during this period. The ST category witnessed an increase of 11 percentage points in male youth literacy rate whereas the increase was 20 percentage points for females.

The literacy rate for youth in urban areas is higher than rural areas for both males and females. The literacy rate of males in urban areas is 92.6% and for rural areas, it is 88.8%. The literacy rate for females in urban areas is 90% whereas the same for rural areas is 78%.

Youth literacy rate - by sex, by residence

It is worth mentioning that, though youth literacy among females is lower compared to males at national level, rural and Urban areas and also among SC & ST categories, during 2001- 2011, a considerable improvement in youth literacy rate among females was noticed for all these categories which in turn reduced the gap in male –female youth literacy rate. During 2001 - 2011, at national level, the male –female gap in youth literacy rate has reduced from 16.5 points to 8.2 points. During this period, the male -female gap in youth literacy rate has been reduced both in rural areas and urban areas, however, the gap is higher in rural areas.

Trend in male -female gap in youth literacy rate

In brief, to improve the overall status of youth literacy, the main target is to improve youth literacy among males and females in rural areas.

Empowerment and safety of women

Goal 3: Empowerment and safety of women

Female Proportion Unemployed (PU)

Proportion Unemployed (PU) is defined as the number of persons unemployed per 1000 persons.

According to the latest Employment Unemployment Survey, in 2013-14, proportion of Male Unemployed is higher than proportion of female unemployed in rural, urban and national levels.

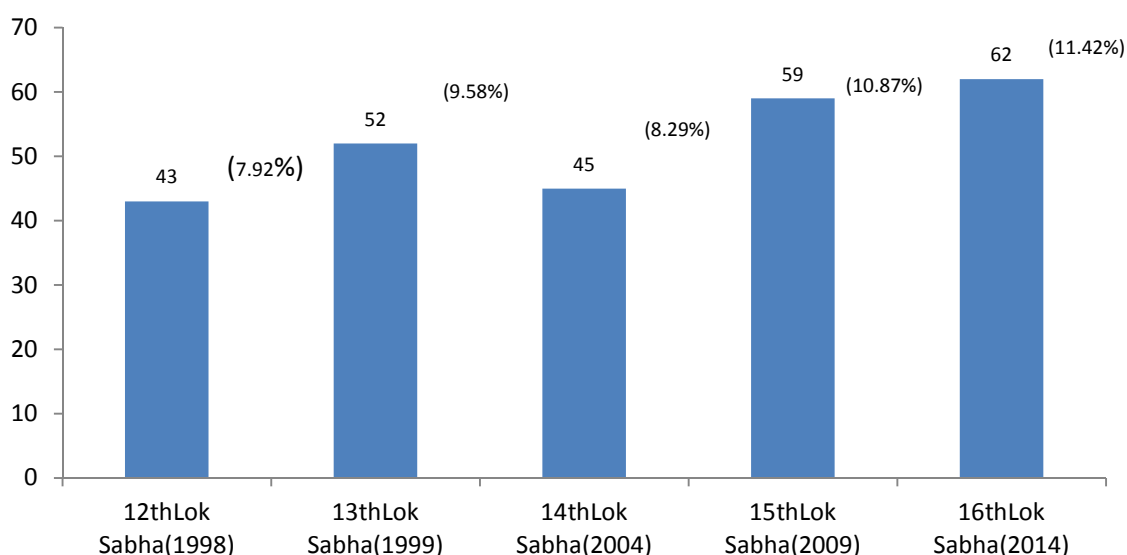

Female Proportion Unemployed (PU) in % for persons aged 15 years and above (2013-14)

Rural			Urban			Rural+ Urban		
Male	Female	Total	Male	Female	Total	Male	Female	Total
3.1	1.9	2.6	2.9	2.3	2.6	3	2	2.6

Proportion of seats held by women in national parliament

In India, the Lok Sabha members are elected through general elections. Over the years, there is slight improvement in the proportion of women MPs. In the 16th Lok Sabha, there are 62 women members, which is 11.42% of the total seats.

Number of women MPs in Lok Sabha

Proportion of women in government ministerial positions

In 2014, Central Government, out of the 45 Ministers, 7 are women.

Year	2011	2012	2013	2014
Proportion of women in government ministerial positions	11%	11%	12%	16%

Percentage share of Women Civil Police w.r.to Total Police

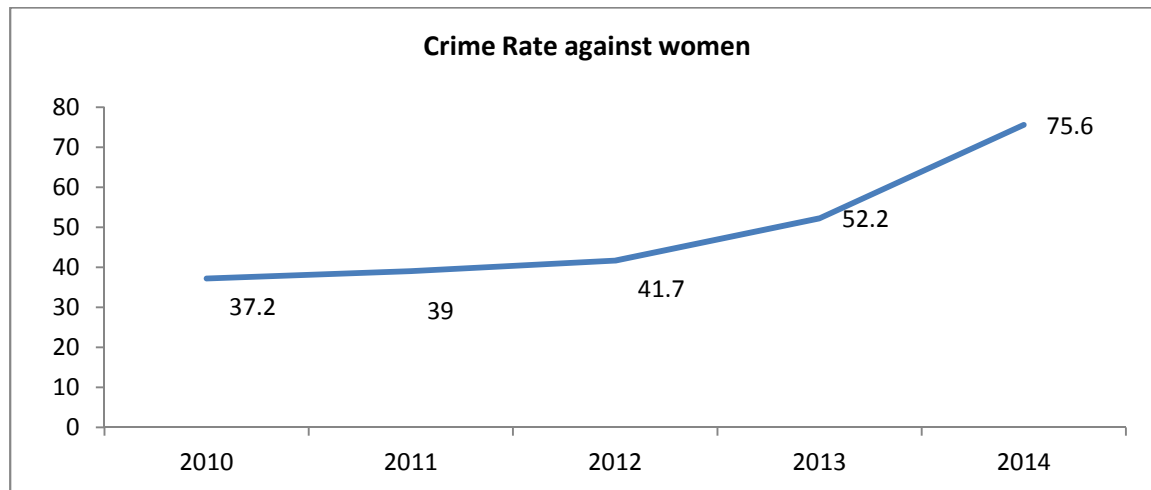

The strength of Women Civil Police in Total Police is very less, though it has shown an improvement over the years. In 2013, in the total police force, only 7.5% are women.

Year	2009	2010	2011	2012	2013
% Women Civil Police	5.0	5.2	6.5	6.6	7.5

Source: NCRB

Crime Rate against women (per cent)

The crime rate defined as the 'number of crimes' per 1,00,000 population. During the last five years, the Crime Rate against women has increased alarmingly from 37.2% in 2010 to 75.6% in 2014.

Source: NCRB

Percent share of rape of SC/ST woman to all rapes

The rate of total cognizable crime against women (incidence of crime per one lakh of female population) in India in 2014 is 56.3 at all India level. During this period, the rate of Rape

(Section 376 IPC) is 6.1 at all India level. Out of the total rape victims in 2014, 6.5% were SC and 3.2% were from ST category.

Year	2010	2011	2012	2013	2014
% Share of SC to total	6.1	6.4	6.3	6.2	6.5
% Share of ST to total	2.9	3.2	2.9	2.5	3.2

Source: NCRB

Conducive environment for Children

Goal 4: Conducive environment for Children

Child Health is of extreme importance in view of a healthy future population. Goal 4 addresses, the various aspects of child health and the indicators reflecting the progress in these sectors are selected.

Proportion of children 12-23 months receiving full immunization, SC/ST wise

At all India level in 2009, 61% of one year old children have received full immunisation, In the SC, ST category the proportion of children 12-23 months received full immunisation are 58.9% and 49.8% respectively.

Proportion of 12-23 months old children immunised against measles, SC/ST wise

The proportion of 1-year-old children immunized against measles is the percentage of children under one year of age who have received at least one dose of measles vaccine. The indicator provides a measure of the coverage and quality of the child health-care system in the country with the assumption that its level of coverage is likely to represent coverage by other antigens like BCG, DPT, and polio as well, as these are given before the antigen of measles could be given. Besides, among these vaccine-preventable diseases of childhood, measles is the leading

cause of child mortality. The Coverage Evaluation Survey (CES) estimates the proportion of one year old children immunised against measles at 74% in 2009.

There is also a rural-urban gap in the coverage of measles immunisation as in the rural areas the coverage is 72% as compared to 78% in the urban areas. The coverage of measles immunisation was nominally high in case of male children (74.8%) than female children (73.2%). The extent of coverage is found to be highly correlated with mother’s education level. While only 59% of children of mothers with no education were immunised against measles, the extent of coverage steadily increased to 85% for children born to mothers with 12 or more years of education. While only 61% of the children below one year belonging to the lowest wealth quintile were immunised, the coverage steadily increased with the family wealth index reaching the highest coverage of 83.5% for children belonging to the highest wealth quintile.

Under-five mortality rate by sex and by place of residence

The under-five mortality rate (U5MR) is the probability (expressed as a rate per 1,000 live births) of a child born in a specified year dying before reaching the age of five if subject to current age-specific mortality rates. Majority of the under five deaths are neonatal deaths which are mainly due to complications and infections happened during birth. In addition to this, the U5MR is sensitive to a wide variety of drivers such as the nutritional status of mothers, level of immunization, availability of child and maternal care services, economic conditions in the family, etc.

In India, the Office of the Registrar General of India (ORGI) regularly releases reliable estimates of fertility and mortality using data collected through Sample Registration System (SRS). As per SRS 2013, the U5MR is at 49 deaths per 1000 live births.

In India, the rural areas, registered high U5MR compared to the urban areas. As per the latest SRS data, in 2013, the U5MR in rural and urban areas are 55 and 29 deaths per 1000 live births respectively. Also, Under Five Mortality Rate is higher for females than males at all India level and this is true for both rural and urban areas.

The gap between female U5MR and male U5MR was higher in rural areas. As per the latest SRS data, in 2013, at all India level, the U5MR for female and male children are 53 and 47 deaths per 1000 live births respectively. In 2013, in rural areas, U5MR was 59 for females

whereas for males it was 51 and in urban areas, U5MR is 30 for female children and 28 for male children.

Infant mortality rate

The Infant Mortality Rate (IMR) is the number of death in children under 1 year of age per 1000 live births. The factors influencing infant mortality are likely to influence the health status of the whole population such as health of mothers and extent of pre/post natal care, general living conditions, rates of illness, their economic development and the quality of the environment. Thus IMR is a very sensitive indicator of health not only for children but also for the population as a whole. High neo - natal (less than 29 days of birth) mortality still continues to be a significant contributor to the infant mortality rate in India. In 2013, at national level, 68% of the total infant deaths were neo - natal deaths.

Source: Sample Registration System, Office of Registrar General of India

In India, the Sample Registration System 2013 reveals that, 12.4% of the total deaths were infant deaths. Significant decline in IMR has been observed both in rural and urban areas over years. However, IMR in the rural areas continues to be at a much higher level than the urban IMR. Although the rural urban gap is slowly decreasing, the latest data show that even in 2013 the rural - urban gap in IMR is significant (rural IMR: 44, urban IMR: 27). It is seen that IMR is more for female babies than male babies and in 2013, female IMR is at 42, whereas male IMR is 39 per 1000 live births.

Child (0-6 years) Sex Ratio, SC/ST wise

While the size of child population in the age group (0-6 years) is declining with decline in the share of children in the total population, the share of girls in 0-6 years is declining faster than that of boys of 0-6 years. This process has led to missing of nearly 3 million girl children compared to 2 million missing boy children in 2011, compared to 2001. Though, the overall sex ratio of the Country is showing a trend of improvement, the child sex ratio is showing a declining trend, which is a matter of concern. During the period 1991 -2011, child sex ratio declined from 945 to 914, whereas the overall sex ratio showed an improvement from 927 to 940.

Rural:

During 2001- 2011, Child (0-6 years) sex ratio has reduced for total, SC & ST in rural areas. The child sex ratio among ST (958) is higher than SC (936) and in rural areas, both SC and ST categories have higher sex ratio compared to rural total (923).

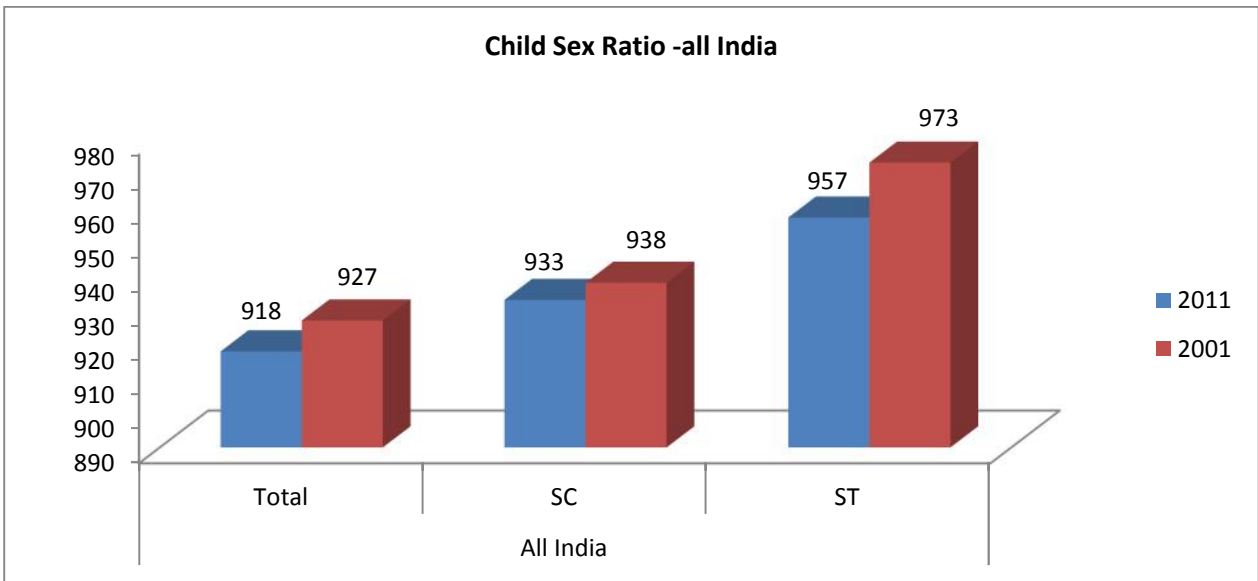

Urban:

During 2001- 2011, Child (0-6 years) sex ratio has reduced for total, SC & ST in urban areas also, though the reduction was not that much significant as in rural areas. The child sex ratio among ST (940) is higher than SC (922) and in urban areas also, both SC and ST categories have higher sex ratio compared to urban total (905).

All India:

During 2001- 2011, Child (0-6 years) sex ratio has reduced for total, SC & ST at all India level. The child sex ratio among ST (957) is higher than SC (933) followed by total (918) at national level.

In 2011, the child sex ratio is higher in urban areas (923), than rural areas (905) with at all India level child sex ratio at 918. Though, a reduction in child sex ratio was observed in all categories during 2001- 2011, in rural areas CSR reduced by 11 points, urban areas by one point and at all India level by 9 points.

Thus, the feature of declining child sex ratio has been observed at all India level, Rural, Urban areas and in SC , ST categories during 2001-2011.

Protecting Mothers and New borns

Goal 5: Pre-natal and anti-natal care for mother and Infants

Risks associated with motherhoods are many, but most of them are avoidable on timely receipt of proper care and attention. Healthy motherhood is vital for the women as well as for the newborn. The Goal 5 is with the objective of ensuring adequate importance to pre-natal and anti-natal care for mothers and infants.

Neonatal mortality rates

At the National level, the neo-natal mortality rate is 28 and ranges from 15 in urban areas to 31 in rural areas. The percentage of neo-natal deaths to total infant deaths is 68.0 per cent at the National level and varies from 56.4 per cent in urban areas to 69.9 per cent in rural areas.

The neonatal mortality rate has reduced at all India level as well as in rural and urban areas.

Maternal mortality ratio

The maternal mortality ratio is the number of women who die from any cause related to or aggravated by pregnancy or its management during pregnancy or child birth or within 42 days of termination of pregnancy, irrespective of duration and site of pregnancy per 1,00,000 live births. The Sample Registration System shows, MMR has reduced from 301 in 2001-03 to 167 in 2011-13.

During 2001-03 to 2011-13, there is 44.52% reduction in MMR at all India level.

Proportion of delivery attended by skilled health personnel, SC/ST wise

Deliveries to be attended by skilled health personnel is a criteria, which can greatly ensure safe delivery. The Coverage Evaluation Survey (2009), shows, at national level 76.2% deliveries are attended by skilled health personnel and for the SC & ST category, the status is at 75% and 61.3%.

Proportion of Institutional Deliveries, SC/ST wise

Institutional deliveries is the best means to ensure deliveries to be attended by skilled health personnel and thereby leading to safe motherhood. At all India level, 72.9% deliveries are

institutional deliveries, whereas among the SC and ST categories, the coverage is 71.3% and 57% respectively.

During 2005-06 to 2009, the improvement in Institutional deliveries is considerable at all India level (88%), SC (116%) and ST (222%) categories.

Skill Development

Goal 6 : Skill development amongst Youth

Skill development among youth is important in terms of equipping them with capabilities for economic activities, thus tackling the problem of unemployment to some extent. An economically active youth population is essential in terms of increased productivity, better wellbeing and also for maintaining law and order of the society. The Goal 6 focuses on skill development among youth.

Percentage Change in number of vocational institutes with seating capacity over last year

Vocational Institutes are meant for inculcating technical skills and prepares learners for jobs that are based in manual or practical activities, traditionally non –academic and totally related to a specific trade, occupation or vocation.

Industrial Training Institutes (ITI) are training institutes which provide training in technical fields which leads to skill development. As on 2015-16, a total of 12106 ITIs (81%- Pvt., 19%- Govt.) are existing which have 1711156 seats are functioning in India.

The details of annual increase in ITIs and seating capacity are shown below.

FY	No of ITIs			Seating Capacity		
	Govt. ITIs	Pvt. ITIs	Total ITIs	Govt. ITIs	Pvt. ITIs	Total
2008-09	1997	4909	6906	408150	545734	953884
2009-10	2133	5906	8039	432006	683622	1115628
2010-11	2217	6583	8800	457794	769038	1226832
2011-12	2244	7203	9447	472738	862750	1335488
2012-13	2271	8073	10344	487922	980814	1468736
2013-14	2275	8475	10750	490802	1032894	1523696
2014-15	2284	9688	11972	498754	1195474	1694228
2015-16	2285	9821	12106	499586	1211570	1711156

The percentage increase in number of ITIs over the previous and the corresponding increase in the seating capacity are very close during 2009-10 to 2014-15. In 2009-10, there was 16% increase in the number of ITIs and 17% in seating capacity compared to the previous year. In the years followed, though there was increase in the number of ITIs and the seating capacity, the percentage increase showed a fluctuating trend. In 2014-15, there is 11% increase in ITIs and the seating capacity compared to the previous year.

Eradication of fatal diseases

Goal 7 : Eradication of HIV/AIDS, Malaria, TB and other fatal diseases

Prevention of deadly diseases and dealing with them are very important aspects for a healthy population. Challenges faced in Medical field are immense to tackle life threatening diseases. Efficient Disease Control Programmes which are capable of preventing the diseases as well as treating the same are essential for development. The Goal 7 targets progress in eradication of HIV / AIDS, Malaria, TB and fatal diseases.

Proportion of population aged 15-24 years with comprehensive correct knowledge of HIV/AIDS

Awareness among youth population with comprehensive correct knowledge of AIDS is important in dealing with the disease. As per Behavioural Surveillance survey (2006), at all India level, 32.9% of population aged 15-24 years are with comprehensive correct knowledge of HIV/ AIDS.

	Total	SC	ST	Source
2005-06	19.9	15.9	10.6	NFHS-III
2006	32.9	Not Available	Not Available	BSS (Behavioural Surveillance Survey), (Dept. of AIDS Control (NACO))

Source: M/o H&FW

Incidence and death rates associated with malaria

Malaria is a public health problem in several parts of the country. About 95% population in the country resides in malaria endemic areas and 80% of malaria reported in the country is confined to areas consisting 20% of population residing in tribal, hilly, difficult and inaccessible areas. During 2010-2013, malaria incidence (Annual Parasite Incidence –API) and deaths have shown a declining trend, but in 2014 an increase has been recorded both for incidence and deaths. In 2014, the 89 malaria incidences were reported in 1 lakh population and nearly 5 in 1 Cr.population died of malaria.

Source: M/o H&FW

The trend in malaria deaths per one lakh population is depicted below:

Source: M/o H&FW

Incidence, prevalence and death rates associated with tuberculosis

With proper care and treatment, TB patients can be cured and the battle against TB can be won. Tuberculosis (TB) is an infectious disease caused by a Bacterium, Mycobacterium tuberculosis. It is spread through the air by a person suffering from TB. A single patient can infect 10 or more people in a year. As per WHO estimates, in India Tuberculosis prevalence rate per one lakh population has reduced from 289 in 2009 to 211 in 2013 and the TB incidence rate reduced from 190 to 171 during 2009-2013.

The TB mortality per one lakh population is also showing a declining trend and in 2013, 19 people per one lakh population died of TB.

Source: M/o H&FW

Proportion of tuberculosis cases detected and cured under directly observed treatment short course (DOTS)

The DOTS (Directly Observed Treatment, Short-course) strategy ensures that infectious TB patients are diagnosed and treated effectively till cure, by ensuring availability of the full course of drugs and a system for monitoring patient compliance to the treatment. The number of cases registered for treatment under DOTS (Directly Observed Treatment Short course), has shown a declining trend during 2009-13, however, shown an increasing trend in 2013-14. The success rate in New Sputum Patients (NSP) is 88% in 2013.

Source: M/o H&FW

It is worth mentioning that, while the trend has been reversed in terms of prevalence rates, in absolute numbers, India's figures for the diseases like HIV/ AIDS, Malaria & TB are still substantial. Hence the intensive initiatives need to be sustained in the fight against these deadly diseases.

Accessibility to basic infrastructure

Goal 8 : Accessibility to basic infrastructure

Transportation and Communication are infrastructures which are basic for development in many fronts.

Length of National/State Highways(In Km)

India has 79,116 km long National highways and 1,69,227 km State highways.

	2012	2013
National Highways	76818	79,116
State Highways		1,69,227

Length of Road completed - Rural (In km) & Number of habitations connected by road under PMGSY

Pradhan Mantri Gram Sadak Yojana (PMGSY) was launched on 25th December 2000 as a fully funded Centrally Sponsored Scheme to provide all weather road connectivity in rural areas of the country. The programme envisages connecting all habitations with a population of 500 persons and above in the plain areas and 250 persons and above in hill States, the tribal and the desert areas.

During 2014-15, 36,337km rural road was completed under PMGSY connecting 10830 habitations.

Length of Railway Coverage

Type	Route/Running Track (in Km)	2013-14	2012-13	2011-12	2010-11	2009-10

No. of Wireless/Wireline telephone Subscribers by Rural/urban (in Million)

Telecommunications has evolved as a basic infrastructure like electricity, roads, etc. and has also emerged as one of the critical components of economic growth required for overall socio-economic development of the country. At national level, the total number of telephone (wireless + wireline) subscribers is 996.13 millions with 580.05 million urban subscribers and 416.08 million rural subscribers as on 31/3/15.

Source: M/o Communication and Information Technology

The immense progress in the penetration of wireless telecommunication has led to the present progress in telecommunication. The total number of wireline subscribers is 26.59 million (3%) and wireless subscribers is 969.54 million (97%) at all India level as on 31/3/15.

Total telephone subscribers as on 31/3/15

Out of the 26.59 million wireline subscribers, 21.47 million (80.74%) is in urban areas, whereas 5.12 million (19.26%) is in rural areas.

Out of the 969.54 million wireless subscribers, 558.58 million (58.23%) is in urban areas, whereas 410.96 million (41.77%) is in rural areas.

Source: M/o Communication and Information Technology

Number of Broadband Subscribers (In Million)

As on 31/3/15, there are 99.2 million broadband subscribers in India. The year to year increase in the number of broadband subscribers is 62.97%.

No. of airports

As in 2013-14, there are 132 airports in India.

Year	2014-15	2013-14	2012-13	2011-12	2010-11
No. of airports	132	134	134	134	132

Source : Airport Authority of India

There are 12 major ports in India and all of them handled Cargo during 2014-15, and there are 200 non –major ports in India, of them, 69 ports had handled cargo in 2013-14.

Universal financial inclusion

Goal 9 : Universal financial inclusion

In order to implement the principle of 'inclusive growth', financial inclusion is extremely important. Access to banking services and insurance for all sections of society especially weaker sections is an essential requirement for this purpose. The goal 9, proposes to report the progress achieved towards universal financial inclusion.

No of accounts opened under PMJDY by Rural/Urban

The Pradhan Mantri Jan-Dhan Yojana is a National Mission on Financial Inclusion to provide all households in the country with financial services, with particular focus to empower the weaker sections of society, including women, small and marginal farmers and labourers, both rural and urban. The necessity of launching such a mission was felt in view of the fact that less than two-thirds of the households in the country have access to banking facilities even after 67 years of independence. The Mission seeks to provide all households in the country, both rural and urban, with access to the financial services, like bank account with RuPay Debit card, access to credit, remittance, Insurance & Pension. Thus, the Mission not only brings the excluded sections into the financial mainstream but makes the transfer of benefits of various subsidy schemes of the government more efficient.

Under PMJDY, as on 1st Jan 2015, out of 12.55 Cr bank accounts opened at national level, 9.8 Cr were in Public Sector Banks (79%), 2.2 Cr in Rural Regional Bank (17%) and 5.2 Cr (4%) in Private Banks. Around 7.5 Cr accounts were opened in urban areas and 5 Cr. In rural areas.

Accounts opened under PMJDY (as on 1/1/15)

The details of accounts opened under PMJDY are as follows.

Number of accounts opened under PMJDY (as on 1/1/15)

Majority of the accounts opened under PMJDY are with public sector banks, 71% in rural areas and 89% in urban areas.

Balance in account (in Lacs) in a/c's opened under PMJDY (as on...)

	Rs in Lacs
Public Sector Bank	817463.04
Rural Regional Bank	159948.08
Private Banks	72551.50
Grand Total	1049962.62

No of a/c's with zero balance under PMJDY(as on...)

Out of the 12.5 Cr accounts opened under PMJDY, 67.32% are accounts with zero balance.

About 66.57% accounts opened in Public Sector banks, 73.14% of accounts opened in Rural Regional Banks and 57.21% accounts opened in Private Banks are accounts with Zero Balance.

Number of Life insurance companies, insurance density and new policies issued

As per status of 2013-14, there are 24 Life Insurance Companies and every 41 per 100 population has life insurance coverage.

Year	2013-14	2012-13	2011-12	2010-11	2009-10
No of Life insurance companies	24	24	24	23	23

New technology in Agriculture and allied sectors

Goal 10 : New technology in Agriculture and allied sectors

Agriculture sector in India is extremely important, as it continues to be an important primary sector of employment, basic economic activity and a development factor to many other sectors. Goal 10 is addressing the progress achieved in agricultural sector.

Total cropped Area under Irrigation (Million Hectares) (Gross Irrigated Area) and Total cropped Area under Rain-Fed (Gross Un-Irrigated Area (Rain-fed Area))

Water is an important component of growth of crops and in a considerable amount of areas crops are grown with irrigation and the rain –fed –areas (un-irrigated). In 2012-13 92.58 Million Hectares of cropped area are under irrigation and 101.82 Million Hectares of cropped area are rain –fed.

Total cropped area -irrigated and unirrigated

Source: Directorate of Economics & Statistics, Ministry of Agriculture.

Cleanliness and safe drinking water

Goal 11 : Cleanliness and safe drinking water

In a country, safe drinking water and sanitation facilities are basic amenities which have direct link to health and life quality of its population. India being a vast country, both in terms of population and geographic area, ensuring safe drinking water and sanitation facilities is a huge task. The Goal 11, aims at monitoring the progress in the sectors of drinking water and sanitation.

Percent change in coverage of Habitations under National Rural Drinking Water Programme

Year	2010-11	2011-12	2012-13	2013-14	2014-15
Coverage	119401	138367	155706	153429	136117
% Change		15.88%	12.53%	-1.46%	-11.28%

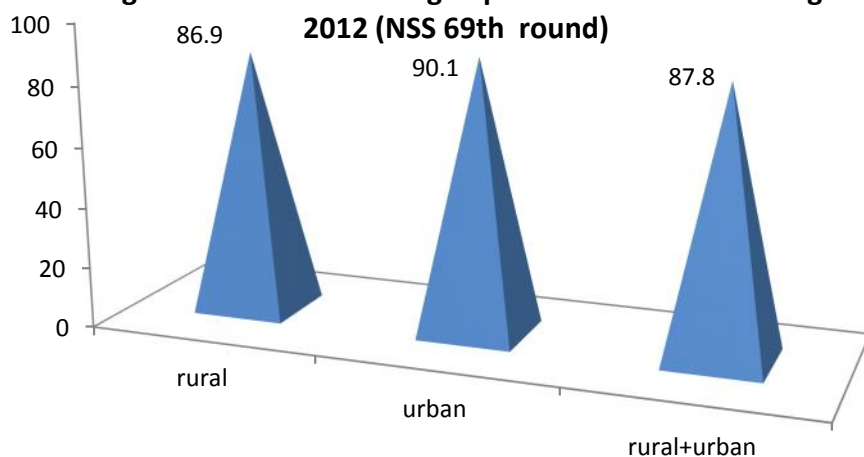

b. Status of Rural population w.r.t. to Rural Drinking Water Supply (as per 40 LPCD – Litre Per Capita per day)

As on 1-4-2015, the Rural Drinking Water Supply Programme has covered 71.22% of the Rural population.

Percentage of households having 'improved source' of drinking water

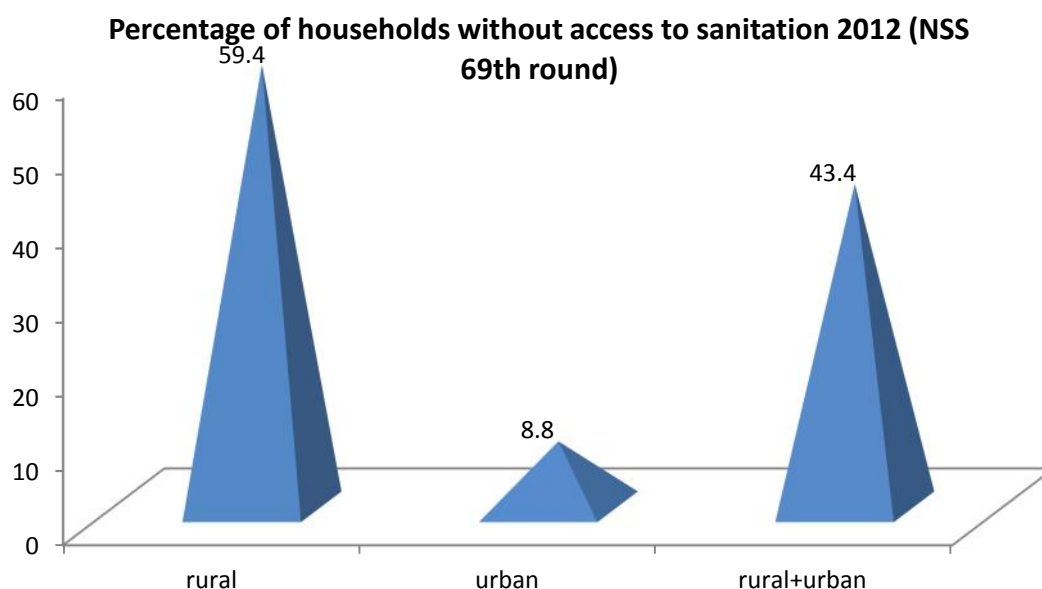

For the year 2012: The sources of drinking water, 'piped water into dwelling', 'piped water to yard/plot', 'public tap/standpipe', 'tube well/borehole', 'protected well', 'protected spring', and 'rainwater collection' have been taken as improved sources. (NSS Report No. 556: Drinking Water, Sanitation, Hygiene and Housing Condition in India). As per NSS 2012, 87.8% households at national level have access to improved water source. In Urban areas, 90.1% households and in rural areas, 86.9% households are having improved source of drinking water.

Percentage of households having improved source of drinking water

Percentage of households without access to sanitation

In 2012, 43.4% households at all India level have no access to sanitation facilities and the status in rural and urban areas are 59.4% and 8.8% respectively. This indicates that, in rural areas, there is still scope and need for a lot of improvement towards achieving basic sanitation facility to all.

Percentage of urban population living in slums

The issues related to the slums and slum population and improving the living conditions of slum dwellers are major challenges being faced by the nation today. The Census 2011 revealed that, 17.4% of the urban population is living in slums.

	2011	2001
Percentage of urban population living in slums	17.4	18.3

Welfare of deprived classes including minorities, disabled, aged and SC/ST

Goal 12 : Welfare of deprived classes including minorities, disabled, aged and SC/ST

The wellbeing of the vulnerable / deprived sections of the society is of paramount importance in ensuring the overall progress. The Goal 12, intends to monitor the progress of various beneficiary programmes specially targeting the vulnerable / deprived classes in various fields like education, rehabilitation etc.

Percent change in SC students under post metric scholarship

In 2014-15, there is an increase of 12.15% in the number of SC students availing post metric scholarship and there are nearly 56 lakh SC students availing this facility.

Year	2010-11	2011-12	2012-13	2013-14	2014-15
No of Beneficiaries	4292337	4604421	4942701	5020757	5630947
% Change		7.27%	7.35%	1.57%	12.15%

Percent change in Rehabilitation of Scavengers

There are 1241 beneficiaries under the programme of rehabilitation of scavengers in 2014-15.

Year	2013-14	2014-15
No. of Beneficiaries	163	1241
% Change		661.34%

Sustainable environment

Goal 13: Sustainable environment

Impacts of Environment are immense in influencing the quality of human life. The development activities undertaken to improve the living standards of people, at large, sometimes affect the natural environment adversely in many ways and cause severe threats to bio diversity. The Goal 13 addresses the concern for sustainable environment to reverse environment degradation and loss.

Percent change in Forest Area coverage

India has a recorded Forest area of 771821 Sq.km in 2013, showing slight improvement over the previous year status.

	Recorded Forest Area (Square Km)	% change over last year value
2003	774740	-
2005	769626	-0.6601
2009	769512	-0.0148
2011	769538	0.0034
2013	771821	0.2967

Source : State of Forests Report, Forest Survey of India, Ministry of Environment, Forest and Climate Change.(Biennial)

Percent change in Rain-fed area

The percentage of Gross Un- Irrigated (Rain-fed) Area over Total Cropped Area) is showing a declining trend over the years. In 2012-13, the Gross Un- Irrigated (Rain-fed) Area is 52.37% of the Total Cropped Area.

Year	Percentage	Percentage change over last year value
2008-09	54.48	-
2009-10	54.98	0.905673
2010-11	55.00	0.04701
2011-12	53.11	-3.44844
2012-13	52.37	-1.37893

Percent change in Area under mangroves

Mangroves are not only important but crucial for the coastal areas. They play a vital role in stabilizing these areas. Their role in protecting of shore-line is very significant hence conserving them is extremely important. In 2013, there is 4628 sq.km of mangrove cover in India. During 2003 -2011, there was an increasing trend in the Mangrove cover, which was reversed in 2013.

The details of mangrove cover

Year	Mangrove cover (Square Km)	% change over last year value
2001	4482	
2003	4448	-0.75859
2005	4581	2.990108
2009	4639	1.266099
2011	4663	0.517353
2013	4628	-0.75059

Comprehensive e-Governance

Goal 14 : Comprehensive e-Governance

The National e-Governance Plan of Indian Government seeks to lay the foundation and provide the impetus for long-term growth of e-Governance within the country.

No. of operational Common Service Centres (CSCs)

The Common Service Centres (CSC) Scheme, as approved by the Government of India, in September 2006 for setting up of 100,000+ internet enabled centers in rural India, envisions CSCs as the front-end delivery points for Government, private and social sector services to rural citizens of India, in an integrated manner. The objective is to develop a platform that can enable Government, private and social sector organizations to align their social and commercial goals for the benefit of the rural population in the remotest corners of the country through a combination of IT-based as well as non-IT-based services. Thus, the CSCs cannot be seen as mere service delivery points in rural India. The CSC is positioned as a Change Agent - that would promote rural entrepreneurship, build rural capacities and livelihoods, enable community participation and collective action for social change - through a bottom-up model with focus on the rural citizen. As on 31/6/15, around 1.42 lakhs CSCs have been made operational across 36 States/UTs.

No. of Groups, discussion themes and tasks published on MyGov

MyGov.in is an innovative platform to build a partnership between citizens and the Government with the help of technology for growth and development of India. Through this

platform, the Government aims to encourage Citizen Participation towards Good Governance by seeking their ideas, suggestions and grass roots level contribution. Citizens can participate in this unique initiative of nation building and for the first time, citizens from across India will come together to share their expert thoughts, ideas and suggestions with the Government in areas related to various policies, programs, schemes etc. MyGov will empower citizens to work hand in hand with the Government. Through this app, citizens can register on MyGov.in to participate in this initiative. The platform consists of various Focus Groups where citizens can undertake tasks (both online and on ground) as well as share their insights through various discussions related to the particular Group. Citizens can join discussions within Groups to share or express their views, ideas, and thoughts with the help of pictures, videos, documents, etc. on policies as well as on matters of national interest and collaborate on key areas of development and governance. Some of the best ideas and suggestions will straight away reach the Hon'ble Prime Minister of India. Also, citizens can volunteer for a task within a Group in the 'Do' section as per their skills and interest areas. Successful completion of a task will enable citizens to earn credit points and a chance to share their ideas with the Hon'ble Prime Minister of India.

As on 30/6/2015, 33 Groups, 182 discussion themes, and 166 tasks have been published in MyGov.

No. of employees and organizations registered on Aadhaar based biometric system

Aadhaar based biometric attendance system is being implemented in the Central Govt Offices in Delhi to start with. The phase I extension of biometric attendance system is under-implementation. As on 30/6/2015, about 1,43,863 employees have registered with the portal <http://attendance.gov.in/>. 579 Organizations have on boarded the portal. Central Government organizations outside Delhi are being registered now. The State level servers for State Governments of Himachal Pradesh, Uttarakhand, Goa, Kerala, Uttar Pradesh and Andhra Pradesh have been set up. Organisation registration of State Government organizations is going on.

No. of e-Transactions on e-Taal

Electronic Transactions Aggregation and Analysis Layer (e-Taal) is a web portal developed by NIC for aggregation and analysis of e-Transaction statistics of central and state level e-governance projects including Mission Mode Projects. It receives e-transaction statistics from web based applications periodically on near real time basis and presents status on actual utilization of various applications running at various locations. It also presents quick analysis of transactions counts in tabular form as well as graphical form to give quick view of the category and number of transactions done through e-governance projects. e-Taal provides visibility for the national / state level e-governance services. 87.69 crore electronic transactions for e-Governance services have been reported for the month of June, 2015.

No.of departments/ agencies/ integrated for mobile governance

The DeitY has developed and notified the framework for Mobile Governance in February 2012. The Mobile Services Delivery Gateway (MSDG) was operationalised in July 2011 and has now become the core infrastructure for enabling the availability of public services through mobile devices. A mobile Applications store has also been created and made operational in January 2012. As on date, 1797 Central and State Departments have been integrated for "PUSH SMS" and more than 521.25 crore SMS notifications have been sent to the citizens for various public services. 423 public services have been operationalized for "PULL SMS". Also, 577 live mobile apps for various government services have been developed & hosted on DeitY's Mobile Appstore.

CONCLUSION

The economic growth, when accompanied by social progress lead to a nation's success. Hence, in order to assess the status of well being of its citizens, it is very much essential that, the Country's achievements in all fronts i.e. economic as well as social progress which are to be analysed in a comprehensive manner. The GDP is the widely accepted measure for gauging economic progress and India has a strong system of National Accounts. However, in order to evaluate the status of social progress, we need to look into the progress achieved in a number of Social sectors and then to develop a methodology to arrive at a composite figure. Also, detailed examination of the components of social progress yields to further insight into areas of progress as well as challenges. It is therefore, vitally important to develop a monitoring mechanism for social progress in the Country.

The initiatives taken for this report have helped to,

1. Identify important goals in social sector
2. Propose an indicator framework for monitoring these goals
3. Assess and present the status of progress under each goals
4. Seek the viability of establishing a regular statistical monitoring mechanism in the Country

Importantly, the 14 goals proposed can be categorised into the three dimensions -Basic Human Needs, Foundations of Wellbeing and Opportunity of the International model for Social Progress Index, which is based on the writings of Amartya Sen, Douglass North and Joseph Stiglitz. It is evident that, the indicators and their data presented in this report are adequately covering the areas of Social Progress. Though, this report has only attempted for an assessment at all India level, the State/ UT wise status can also be presented on the basis of data available for the indicators. Hence, the initiatives taken so far may be extended for developing an appropriate index for measuring the Social Progress in the Country in the near future.

Poverty gap ratio(MRP Consumption Distribution)

	2004-05	2011-12
Rural	9.635	5.05
Urban	6.078	2.7

Source: Planning Commission (now NITI Aayog)

Average daily PROTEIN intake per capita

	2009-10	2011-12
rural	59.3	60.7
urban	58.8	60.3

Source : NSSO

NSSO does not tabulate Proportion of population below, minimum level of dietary energy consumption but it uses a level of 2700 Kcal per consumer unit per day as a yardstick for comparison. This information is available in NSS Report No. 540 & 560: Nutritional Intake in India for the years 2009-10, 2011-12 respectively. The results are available in NSS Reports for almost all previous quinquennial surveys of consumer expenditure (NSS 61st Round: 2004-05 and back), but these results are not comparable due to certain changes in reference periods for collection of data of different items.

Share in national consumption for the poorest quintile class of MPCE (NSS)

Goal 11 : Cleanliness and safe drinking water**Percent change in coverage of Habitations under National Rural Drinking Water Programme**

Year	2010-11	2011-12	2012-13	2013-14	2014-15
Coverage	119401	138367	155706	153429	136117
% Change		15.88%	12.53%	-1.46%	-11.28%

Status of Rural population w.r.t. to Rural Drinking Water Supply (as per 40 LPCD)

As on	1.4.15
% Covered	71.22%

Percentage of households having 'improved source' of drinking water

	during 2008-2009 (NSS 65th round)	during 2012 (NSS 69 th round)
rural	90.4	86.9
urban	93.9	90.1
rural+urban	91.4	87.8

Source (i): For the year 2008-09: NSS Report No. 535: Housing Condition and Amenities in India: July, 2008-June, 2009. The sources of drinking water 'tap', 'tube well/hand pump', 'protected well' and 'harvested rainwater', have been taken as improved sources.

(ii) For the year 2012: NSS Report No. 556: Drinking Water, Sanitation, Hygiene and Housing Condition in India. The sources of drinking water, 'piped water into dwelling', 'piped water to yard/plot', 'public tap/standpipe', 'tube well/borehole', 'protected well', 'protected spring', and 'rainwater collection' have been taken as improved sources.

Note: As per MDG guidelines, 'bottled water' is not considered as an 'improved' source of drinking water and therefore have not been included in the calculation of the estimates of percentage of households having 'improved source' of drinking water.

Percentage of households without access to sanitation

	during 2008-2009 (NSS 65th round)	during 2012 (NSS 69th round)
rural	65.2	59.4
urban	11.3	8.8
rural+urban	49.2	43.4

Source : For the year 2008-09: NSS Report No. 535: Housing Condition and Amenities in India: July, 2008-June 2009.

For the year 2012: NSS Report No. 556: Drinking Water, Sanitation, Hygiene and Housing Condition in India.

Percentage of urban population living in slums

	2011	2001
	17.4	18.3

Source : Census

Goal 12 : Welfare of deprived classes including minorities, disabled, aged and SC/ST**Percent change in SC students under post matric scholarship**

Year	2010-11	2011-12	2012-13	2013-14	2014-15
No of Beneficiaries	4292337	4604421	4942701	5020757	5630947
% Change		7.27%	7.35%	1.57%	12.15%

Percent change in Rehabilitation of Scavengers

Year	2013-14	2014-15
No of Beneficiaries	163	1241
% Change		661.34%

Goal 13: Sustainable environment**Percent change in Forest Area coverage**

	Recorded Forest Area (Square Km)	% change over last year value
2003	774740	-
2005	769626	-0.6601
2009	769512	-0.0148
2011	769538	0.0034
2013	771821	0.2967

Source : State of Forests Report, Forest Survey of India, Ministry of Environment, Forest and Climate Change.(Biennial)

Percent change in Rainfed area (% of Gross Un- Irrigated (Rainfed) Area over Total Cropped Area)

Year	Percentage	Percentage change over last year value
2008-09	54.48	-
2009-10	54.98	0.905673
2010-11	55.00	0.04701
2011-12	53.11	-3.44844
2012-13	52.37	-1.37893

Percent change in Area under mangroves

Year	Mangrove cover (Square Km)	% change over last year value
2001	4482	
2003	4448	-0.75859
2005	4581	2.990108
2009	4639	1.266099
2011	4663	0.517353
2013	4628	-0.75059

Goal 14 : Comprehensive e-Governance

List of Indicators	Periodicity	Present Status
No. of operational Common Service Centres (CSCs)	Quarterly	1,41,353
No. of user departments for e-Office	Quarterly	115
No. of Groups, discussion themes and tasks published on MyGov	Quarterly	33 Groups, 182 discussion themes, 166 tasks
No. of employees and organizations registered on Aadhaar based biometric system	Quarterly	Employees: 143863, Organizations: 579
No. of e-Transactions on e-Taal	Quarterly	87.69 crore for June 2015
No. of departments/agencies integrated for mobile governance	Quarterly	1797
