(3) ENVIRONMENT STATISTICS

TEMPERATURE - Observations of temperature of air in shed are recorded at most of the observatories twice a day at 08.30 and 17.30 hours IST. For this purpose there- mometers are installed at a height of 4 feet 6 inch above the ground in Stevenson screens which provide free access to the air but at the same time protect the theremometers from direct rays of the sun.

HUMIDITY - Relative humidity is the measure of water vapours present in the atmosphere relative to the corresponding amount for saturation. It is recorded at the principal observatories by standard record at 8.30 and 17.30 hours IST.

The temperature and humidity data has been supplied by Indian Meteorological Department, Jaipur.

RAIN FALL - Actual rain fall is recorded at the stations at 8.30 hour IST every day. The amount measured gives the rain fall of the previous 24 hours and the data is tabulated by the Board of Revenue (Land records), Rajasthan.

Normal annual rain fall is the average of rain fall data for the fifty years ending in 1950.

(4) VITAL STATISTICS

This chapter associated with vital statistics of Rajasthan State.

Table 4.1 and 4.1(A):- In these tables the data are based Report on MCCD, RGI, New Delhi, with breakup of Male, female's causes of death. The maximum cause of death in 2010 is 8041 by Diseases of the circulatory system and 2013 is 9337 by Diseases of the certain conditions originating in the perinatal period.

Table 4.2, 4.3 and 4.3(A):- Both tables are based on SRS Bulletin, published by registrar general of India, New Delhi, Estimated Birth rates, Deaths rates and Infant Mortality rates for the years 2011 to 2014 are presented in the table. The B. R. per 1000 population is 26.2 for the year 2011 and 25.0 for the year 2014 in the state. the D. R. per 1,000 population is 6.7 for the year 2011 and 6.4 for the year 2014. The IMR is 52 for the year 2011 and 46 for the year 2014 per 1,000 live Births. Again table 4.3 & 4.3(A) shows DR and IMR with breakup of Male, female and by residence Rural, Urban also.

Table 4.4, 4.4(A), 4.4(B) and 4.4(C):- These tables presents status of districts in Birth and Death registration in Rajasthan. Highest Birth registration is 118.56 Percent in Jaisalmer and least in Bundi district which is 77.88%. On another side Death registration is Highest in Ajmer is 119.30% and least in Banswara is 45.62% in the year 2011 and year 2014 in Highest Birth registration is 124.95 Percent in Jaisalmer and least in Bundi district which is 63.46%. On another side Death registration is Highest in Ajmer is 120.07% and least in Dungarpur is 44.75%.

Table 4.5:- In this table the data of child mortality by sex and residence are based on Annual Health Survey 2012-13.

The two terms, $q(1)$, which is the Infant Mortality Rate (IMR) in life table terminology and $q(5)$, Which is the Under Five Mortality Rate (U5MR), that is the probability of dying before completing five years of age, are most frequently used. It is customary to express these rates in terms of per thousand live births; thus $1000 * q(1)$ and $1000 * q(5)$ are given as IMR and U5MR respectively.

(13) AGRICULTURE

Data relating to the pattern of land utilisation, Area, production, and yield per hectare of principal crops, Index numbers of Agricultural area, production, productivity, agricultural machinery and implements, No. of operational holdings etc. is covered in this chapter.

OPERATIONAL HOLDINGS - This information of operational holdings by size of holdings and irrigation facilities was collected from all the villages at the time of Agriculture census in the year, 2010-11.

LAND UTILISATION - The main purpose of the table for land Utilisation is to indicate broadly the ways in which the land of the State is utilised. The classification of area was formerly available under five classes, which has been implied to fall in line with standard classification as laid down by the Ministry of Food and Agriculture, Government of India.

REPORTED AREA - Reported area for land utilisation purpose is based on the returns of area estimates prepared by the Revenue staff of the state.

FOREST - The area shown under forest in the table on Land utilisation may not tally with that given by the Forest Department because (i) The Forest Department reports, forests worked out by the Forest Department while the table on Agriculture Statistics includes in addition, forest area administered by district officers and (ii) certain villages and other lands not covered by the forest but worked out by Forest Department as forest, are not treated as forest in the returns of Agricultural Statistics.

AREA NOT AVAILABLE FOR CULTIVATION - This stands for all land which is absolutely barren or uncultivable covered by buildings, Water or roads or otherwise appropriated for non-agricultural purpose Under sub-Head "Land put to non-agricultural use" is included land occupied buildings, roads, railways or under water and other lands put to uses other than agriculture while under the sub-head "Barren and un-culturable land" includes mountains, desert etc.

OTHER UNCULTIVATED LAND EXCLUDING FALLOW LAND - This denotes land available for cultivation but not taken up and includes culturable waste, permanent pastures and other grazing land and land under miscellaneous trees, crops and groves. The last one is that type of culturable land which is not included under area sown but is put to some agricultural use.

FALLOW LAND - It includes current fallow i.e. land which is left fallow during the current year only and other fallow land i.e. lands which were taken up for cultivation but are temporary out of cultivation for a period of not less than one year and more than 5 years.

NET AREA SOWN - Area Sown More Than Once and Total Cropped Area in computing the net area sown, area sown more than once have been counted only once under the head "Area Sown more than once" area sown with two and more than two crops in the same year is counted as many times as the crop is sown. Total cropped area is the total of net area sown and area sown more than once.

INDEX NUMBER -

COVERAGE : The present series of Index Numbers of Agricultural Production in Rajasthan covers 34 principal crops for which forecasts are issued by the Board of Revenue from time to time. These crops occupy major Portion of the gross sown in the State. These 34 crops are further sub-divided into two main groups, namely, food-crops and non-food crops and seven sub-groups, namely cereals, pulses, oil-seeds, fibres, spices & condiments, vegetables and others.

The data about the crops included for the preparation of index cover about 83 percent of the cropped area and as such the trends in their production are fair representation of trend of the entire agricultural production in the State.

BASE PERIOD - The base period for these indices has been changed from the triennium 1979-80 to 1981-82 to the triennium 1991-92 to 1993-94 considering the recommendation of the Economics & Statistical Advisor, Ministry of Agriculture & Irrigation, Govt. of India, Technical Committee on Index Numbers related to agriculture economy and of the technical committee on Prices & Cost of living. This is also reasonable period from the point of view of weather, Agriculture production and prices in Rajasthan.

WEIGHTS - Weights have been assigned to the different commodities in the same proportion which is the average value of its production bears to the total average value of production of all commodities during the period. The production has been valued at the annual harvest prices of the commodities prevailing each year during the base period.

METHOD OF CONSTRUCTION OF INDEX NUMBER - The percentage production relative for each crop for the current year has been calculated with the corresponding estimated production in the base period. To obtain group-level indices these production relatives have been multiplied with the weights of the respective crops. The aggregative of the products has been divided by the total weights.

The Concept of production utilised in the construction of index number is that of gross production of crops Revised estimates of yield for each year have further been processed as indicated above to get the estimates yield for which figures have been used for construction of the index number.

AVERAGE YIELD OF PRINCIPAL CROPS - It has been calculated by dividing production figures by area.

AREA AND PRODUCTION OF CROPS - The figures of area and production are given for principle cereals, Pulses and commercial crops. The area figures are compiled by the Board of Revenue (Land Records), Rajasthan from the Agricultural Statistical returns prepared by the Revenue staff. While the production figures for the state as a whole are estimated on the basis of crop cutting experiment results for Bajra, Maize, Jowar, Sesamum, Cotton, Groundnut, Sugarcane, Paddy, Wheat, Barly, Gram, linseed and Rape & mustard. For other crops it is calculated on the basis of average normal yield of past 10 years. For estimating different crops and remaining districts the estimates are only tentative. The total of the district tallies with the production for the State as a whole.

The figures as given are those based final forecasts, as well as those based on revised estimates as issue from time to time alongwith the final forecasts for the following year. The data relates to the agriculture year ending June.

AGRICULTURAL EQUIPMENT AND IMPLEMENTS - The figures relating to the Agricultural equipment and implements, actual use for 2003 are based on 17th Quinquennial Livestock Census. The data is compiled from Live Stock Census, 2003. Supplied by Board of Revenue for Rajasthan, Ajmer.

(14) IRRIGATION

The statistics of irrigation projects, schemes and area irrigated under different sources and total area of crops irrigated are shown in this chapter.

NET IRRIGATED AREA - The area irrigated from different sources represents the net irrigated area. If two or more crops are irrigated in the same year from the same source the area is counted only once.

GROSS IRRIGATED AREA - Total area irrigated under different crops represents the gross irrigated area and includes area irrigated under more than one crop during the same year. Area irrigated more than once in a single harvest is counted only once.

The data on irrigation by sources and crops is compiled by the Board of Revenue (Land Records), Rajasthan from the data contained in the Annual Agricultural Statistics Returns prepared by the Revenue Staff. The information on irrigation works is supplied by the irrigation department, Rajasthan. The data Contained in Table No. 14.1 (A to E) relates only to plan works in progress.

Table 14.1 (A) to 14.1 (E):- These tables are associated with financial and physical progress of irrigation projects and Schemes govern by water resources Department Rajasthan. Additional irrigation potential created during plan period highest is 5.30 lakh hect. in X five year plan and minimum is 1.03 lakh hect. in I st five year plan. In XII Five year plan year 2013-14 total 30 Number of irrigation work completed and 0.16 lakh hect. additional irrigation potential created. Highest irrigation projects expenditure is in Jalore (16204.18 lakhs) and minimum is " 0" in Barmer, Churu, Jaisalmer, Jhunjhunu and Sikar district in the year 2013-14. In Minor irrigation scheme Highest Exp. is 6709.93 lakhs in Banswara and minimum is " 0" in Churu, Hanumangarh and Jaisalmer district, again max. no. of projects in Dungarpur is 4771 and minimum in Churu is "0".

Table 14.2, 14.2(A), 14.2(B) and 14.2(C):- These tables gives information regarding districtwise net irrigation by sources Year 2010-11 to 2013-14. The Total 7649627 Hect. 24.30% from canals, 0.88% from tanks, 72.70% from wells and 2.12% from other sources are irrigated in the year 2013-14.

Table 14.3, 14.3(A) and 14.3(B):- These tables presents districtwise gross area of food and Non-food crops irrigated from the year 2010-11 to 2013-14. In which 55.32% food crops (including sugarcane) and 44.68% is Non- food crops (including cotton) irrigated area are recorded in the Year 2013-14.

(18) MINING & QUARRYING

Rajasthan is rich in variety of minerals. This chapter presents data on quantity and value of major and minor mineral production in the state.

Table 18.1 and 18.1(A):- These tables covers district wise data regarding quantity, value of production, Number of leases and Employment of principal minerals during the years 2011-12 to 2013-14.

Table 18.2 and 18.2(A):- These tables contains production and sale value of major and minor mineral from 2009-10 to 2013-14. maximum production in major mineral is limestone 56672.266(000'tons) and sale value Mineral is lead Zinc (Run of mine ore) 172423.165 lakh Rupees. Again Minimum production is 0.219 000' Tonnes for Cadmium and minimum sale value mineral is Garnet (Abr. and Crude) (7.500 lakh Rs.) in the year 2013-14.

Table 18.3:- This table gives the informatiion of mining progress in the year 2013-14. prospecting licences in force is 47 and quaery licences is 18248.
