

**Household Consumer Expenditure and  
Employment Situation in India  
1995-96**

**NSS 52nd Round  
July 1995 - June 1996**

**National Sample Survey Organisation  
Department of Statistics  
Government of India**

**September 1998**

**(Approved)**

## **PREFACE**

*In 1972 the National Sample Survey Organisation (NSSO) began a quinquennial series of all-India surveys on consumer expenditure, employment & unemployment. In addition to this, an annual series of consumer expenditure surveys was started in 1986. These surveys were carried out in NSS rounds which had other subjects of enquiry as their focus. Apart from the main subject(s) of enquiry, a consumer expenditure schedule was canvassed in four households (two households up to the 48th round, 1992) in every surveyed village and urban block. The schedule was enlarged from the 45th round (1989-90) onwards, to collect some basic information on employment and unemployment. As a result, an annual series of data on both consumer expenditure and employment-unemployment has since then been available.*

*The present report is based on data collected in the 52nd round (July 1995-June 1996) of NSS. The main findings on consumer expenditure and employment are presented, respectively, in Chapter Two and Chapter Three of the report, Chapter One being introductory. The report also includes comparative information from previous surveys. Appendix A gives detailed tables at national level. Appendix B explains the sample design and estimation procedure followed in the 52nd round.*

*The schedule design for the survey was more or less same as in the previous round. There were two types of schedule - one with a uniform reference period of 30 days for collection of consumption data, and the other with reference periods varying over groups of consumption items. As usual, the field work for the survey was handled by the Field Operations Division and the collected data were processed and tabulated by the Data Processing Division of NSSO. The report was prepared by the Survey Design and Research Division. I am grateful to the members of the Governing Council of NSSO, the Heads of NSSO's Divisions and their colleagues for their contributions at various stages. The report, I hope, will be useful to planners and policy makers.*

*Comments/suggestions from readers will be most welcome.*

# Chapter One

## Introduction

1.0 The National Sample Survey (NSS), since its inception (1950-51), collected data on household consumer expenditure in every round up to the 28th (1973-74). After the 26th round of the survey, the Governing Council of NSSO decided to undertake the surveys on consumer expenditure and employment-unemployment together once in every five years. Accordingly, "quinquennial" surveys on consumer expenditure and employment-unemployment were conducted in the 27th, 32nd, 38th, 43rd and 50th rounds of NSS, at roughly five-year intervals. In these rounds both survey schedules - Sch.1.0 dealing with household consumer expenditure and Sch.1.0 with employment-unemployment - were canvassed in each sample household.

1.1 **Annual series:** The need for an annual series of data on consumer expenditure was also felt at the same time by planners and research workers. The Governing Council therefore decided that while the quinquennial consumer-expenditure-cum-employment and unemployment surveys would be carried on as before, every other round of NSS, starting from the 42nd (1986-87), might include a consumer expenditure enquiry on a reduced scale (2 or 4 sample households per sample village/block) with a slightly abridged version of sch.1.0 (abridged with respect to ancillary and auxiliary information). From the 45th round, it was decided to extend the scope of this "annual" survey by introducing some important questions on activity status of household members to generate some key indicators on employment and unemployment as well.

1.2 The present report gives the results of the NSS 52nd round survey (July 1995 -

June 1996) on consumer expenditure and employment-unemployment, the ninth of the "annual" series. In this round, the main enquiry was on health care, education and problems of the aged persons. In addition, Sch.1.0 was canvassed in 4 sample households per sample village/block. In all 7888 villages and 5112 blocks were selected for the central sample. The schedule was ultimately canvassed in 28834 rural households and 19734 urban households.

1.3 **Geographical coverage:** The geographical coverage of the survey was to be the whole of the Indian Union except Ladakh and Kargil districts of Jammu & Kashmir, 768 interior villages of Nagaland and 172 villages in Andaman & Nicobar Islands which remain inaccessible throughout the year. However, certain districts of Jammu & Kashmir viz., Doda, Anantnag, Pulwama, Srinagar, Badgam, Baramula and Kupwara, as well as Amritsar district in Punjab, had to be excluded from the survey coverage due to unfavourable field conditions.

1.4 **Contents of the report:** The main findings of the enquiry on consumer expenditure are presented in Chapter Two, which discusses the pattern of variation of monthly per capita consumer expenditure over rural and urban areas of 15 major states and 3 groups of smaller states and union territories. Also studied is the distribution of households by household size. Chapter Three presents the key indicators of employment and unemployment obtained from the 52nd round survey. The estimates are based on two approaches followed in NSS surveys for collection of information

on employment and unemployment: usual status and current weekly status. To give a comparative picture of the employment situation over the period 1983 (38th round) to 1995-96 (52nd round), corresponding results obtained from the earlier surveys are given alongside. The discussion in Chapter Three is confined to the all-India estimates. Some key estimates are

presented at broad levels for the major states and certain groups of smaller states and u.t.'s. Concepts and definitions involved in the collection of consumption data are discussed at the beginning of Chapter Two, and those related to employment and unemployment, at the beginning of Chapter Three. Detailed tables at national level are given in Appendix A. The sample design and estimation procedure is explained in Appendix B.

## Chapter Two

# Household Consumer Expenditure

### Concepts And Definitions

**2.0.0 Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also.

Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

**2.0.1 Adult:** A person who has completed 15 years of age.

**2.0.2 Household size:** The size of a household is the total number of persons in the household.

### **2.0.3 Household consumer expenditure:**

The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary values of consumption of various groups of items namely (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

**2.0.4** For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipt in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate. For evaluating the consumption of the items of group (iii) i.e. items categorised as miscellaneous goods and services and durable goods, a different approach is followed. In this case, the expenditure made during the reference period for the purchase of goods and services is considered as consumption.

**2.0.5** It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the normal resident members of the

household and also by the guests whether during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan advance, etc. made by the household are not considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item "cooked meals" is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the normal resident members and for guests and employees will also be recorded in the purchaser household.

2.0.6 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept in mind while using the NSS consumer expenditure data for any nutritional studies relating to the nutritional status of households.

### 2.0.7 Value of consumption:

Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collection, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

### 2.0.8 Monthly per capita consumer expenditure (MPCE):

For a household, this is its 30 days' total consumer expenditure divided by its size. A person's MPCE is understood as that of the household to which he or she belongs.

2.0.9 **MPCE class:** For classifying households or persons by monthly per capita expenditure level, 12 classes have been formed in each sector - rural and urban. The MPCE classes were formed as follows:

MPCE level	Rural (Rs)	Urban (Rs)
1.	below 120	below 160
2.	120-140	160-190
3.	140-165	190-230
4.	165-190	230-265
5.	190-210	265-310
6.	210-235	310-355
7.	235-265	355-410
8.	265-300	410-490
9.	300-355	490-605
10.	355-455	605-825
11.	455-560	825-1055
12.	560 & above	1055 & above

The class limits for each sector were chosen in such a way that the first and last two classes contained 5% of the population and the remaining eight classes contained 10%

of population of each sector based on 50th round data.

**2.0.9 Major states:** The term will be used to denote the following states of India: Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. The remaining states and union territories of India are divided into three groups - called North-Eastern, North-Western and Southern - for the purpose of presentation of estimates. These groups have been formed as follows :

**2.0.10 North-Eastern:** Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim, Tripura.

**2.0.11 North-Western:** Jammu & Kashmir, Himachal Pradesh, Chandigarh, Delhi.

**2.0.12 Southern:** Andaman & Nicobar Islands, Dadra & Nagar Haveli, Goa, Daman & Diu, Lakshadweep, Pondicherry.

**2.0.13 Reference period:** In collecting data on consumption, the adoption of a reference period always involves a difficult choice. Too short a reference period (such as 1 day) gives rise to irregular data as a household's consumption expenditure does fluctuate a great deal from day to day, or from week to week. Too long a reference period, on the other hand, can introduce a good amount of recall error into the data. The annual series of consumer expenditure surveys, up to the 49th round, used a uniform reference period of "last 30 days" for all items of consumption. In the bigger surveys of the quinquennial series, an additional reference period of "last 365 days" was used for some items of consumption - particularly clothing,

footwear and durable goods - but most results were tabulated using the "last 30 days" data. During the 51st, and 52nd rounds, one-half of the sample of households were subjected to schedule type 1, which had a reference period of 30 days throughout. In the other half of the sample, a schedule (schedule type 2) with different reference periods for different items was tried out on an experimental basis. The reference periods for schedule type 2 were:

food, pan, tobacco and intoxicants	last 7 days
fuel & light, miscellaneous goods & services, and medical (non- institutional)	last 30 days
educational, medical (institutional), clothing, footwear and durable goods	last 365 days

**2.0.14 Milk and milk products:** This includes ghee, butter, curd, ice-cream etc. Milk-based sweetmeats (*pera*, *rosogolla* etc.) come under "beverages, refreshments and processed food" unless they are prepared from milk, sugar, etc. within the household. In the latter case consumption of milk, sugar, etc. are accounted separately instead of the entire consumption being accounted under "milk products".

**2.0.15 Clothing:** This category includes bedsheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and mattings, cotton yarn, wool, and knitting wool. It, however, **excludes** tailoring charges, which come under "miscellaneous goods and services".

**2.0.16 Miscellaneous goods and services:** This is a residual group containing items other than food, pan, tobacco, intoxicants,

**Table T1: Per 1000 distribution of rural and urban population over MPCE classes: estimates based on schedule types 1 and 2, 51st and 52nd rounds**

<b>All-India</b>											
rural						urban

all classes	1000	1000	1000	1000	1000	all classes	1000	1000	1000	1000	1000

Note: Schedule types 1 and 2 differed in reference period for collection of consumption data. (See para 2.0.13 for details.)

fuel and light, clothing, footwear, rent, taxes and durable goods.

**2.0.17 Durable goods:** Items included here are distinguished from miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs and construction of durables used for domestic purpose is included in "expenditure on durable goods".

**2.1.0** The results on level and pattern of monthly per capita consumer expenditure (MPCE) will now be discussed for rural and urban areas of 15 major states and 3 groups of smaller states and union territories. This apart, the distribution of households by household size will be studied. At the end, the results of this round will be compared with those of earlier rounds.

## Main findings

Fig. 1R: Distribution of households by household size  
rural India

Fig.1U: Distribution of households by household size  
urban India

## Consumption and Consumer Expenditure

2.1.1 As mentioned in paragraph 2.0.13, the usual reference period - "last 30 days" - for collection of consumption data in NSS was adopted in only one-half of the sample of households (schedule type 1). In the other half (schedule type 2), different reference periods - of 7, 30 and 365 days duration - were used for different item groups. The extent and nature of differences in the results obtained by the two approaches is currently under study and is not the subject of this report. Here, according to the programme of releasing estimates of consumer expenditure as an annual time series to fill the gap between the full-scale quinquennial surveys, the estimates according to schedule type 1 (uniform reference period of 30 days) are presented, both because of the similarity in methodology with the previous rounds, and because the distribution of consumer expenditure based on schedule type 1 is noticeably closer to that obtained in the 50th round or in the schedule type 1 of 51st round (after allowing for inflation) than the distribution based on schedule type 2 (see Table T1 above).

### 2.2 Distribution of MPCE

2.2.1 Distributions of rural and urban households and persons by MPCE class (based on schedule type 1), for each of the 18 states/state-u.t. groups (hereafter, **states**) are given in Statements 2.1 (R & U) and 2.2 (R & U). In addition, Table 1 (Appendix A) gives total number of persons and number of economically active persons per 1000 households (and their break-up into number of adult males, adult females and children), for each state and all-India.

2.2.2 Statement 2.1 also shows average household sizes in rural and urban areas of the different states. Average household size for the country as a whole was estimated as 5.0 for rural areas and about 4.6 for urban areas. This statement reveals that average rural household size was highest in Haryana (5.7) and Rajasthan (5.6). In the urban sector, state-level averages of household size were high in Bihar (5.2) and in Gujarat and U.P. (5.1).

### 2.3 Distribution of household size

2.3.1 The distribution of households over household size for different states and all-India is presented in Appendix Table (4). It is seen that households are concentrated at size 4 or 5 for all the states in both rural and urban areas. The all-India distributions for rural and urban sectors have been presented in Fig. 1R & 1U.

2.3.2 Number of households having their size more than 8 was very high in Madhya Pradesh (13%), Rajasthan (13%) and Uttar Pradesh (10%) but very low in Tamil Nadu (1%) against a national average of 8%. Households with one or two members were very rare in only Haryana among major states. It was only 3% against a national average of 16%.

### 2.4 Average MPCE: states and all-India

2.4.1 Averages of MPCE for rural and urban areas of the major states are shown in **Table T2**.

2.4.2 The all-India rural average of MPCE was Rs 344. At state level, average rural MPCE was between Rs 295 and Rs 365 in 12 of the 15 major states. Kerala, Punjab and Haryana were the top three states in terms of average MPCE in rural areas. The

state	average rural MPCE			state	average urban MPCE		
	51st round (Rs)	52nd round (Rs)	% increase		51st round (Rs)	52nd round (Rs)	% increase
Bihar	238	298	25	Bihar	411	442	8
West Bengal	275	298	8	M.P.	359	486	35
Orissa	244	309	27	Gujarat	479	500	4
M.P.	290	310	7	Rajasthan	457	509	11
Assam	305	316	4	West Bengal	427	521	22
Tamil Nadu	345	322	-7	Tamil Nadu	460	536	17
Andhra Pradesh	294	325	11	Assam	464	537	16
Karnataka	286	346	21	Karnataka	478	537	12
U.P.	332	349	5	U.P.	407	537	32
Maharashtra	307	351	14	Andhra Pradesh	517	553	7
Gujarat	356	358	1	Orissa	439	569	30
Rajasthan	312	364	17	Punjab	681	645	-5
Haryana	397	491	24	Haryana	489	647	32
Punjab	424	493	16	Kerala	437	674	54
Kerala	456	506	11	Maharashtra	682	720	6
all-India	309	344	11	all-India	508	599	18

rural average was lowest in Bihar and West Bengal (Rs 298).

2.4.3 All-India average MPCE in the urban sector was Rs 599, 74% higher than average MPCE in rural areas. State-level average MPCE was under Rs 570 for 11 of the 15 major states. For Maharashtra, average urban MPCE was around Rs 720. The urban average of MPCE was lowest in Bihar (Rs 442).

2.4.4 Average MPCE\* in rural areas shows an increase of 11.3% (Rs 35) over the 51st round (1994-95) and urban MPCE, an increase of about 17.9% (Rs 91). The increases (and occasional reductions) observed in average MPCE at state level

\* Note that all figures are in nominal terms and not adjusted for price changes.

are, however, obviously affected by sampling fluctuations.

## 2.5 Per capita expenditure on different items of consumption: all-India

2.5.1 Statements 2.3R and 2.3U show the break-up of MPCE by 28 groups of items of consumption: 14 food groups and 14 non-food groups, for each of the 18 states and all-India. At the all-India level, more detailed information on consumption pattern is available in Table 3 of Appendix A, where the break-up of value of consumption by item is given separately for different segments of the rural and urban population classified by MPCE.

2.5.2 For rural India, monthly per capita consumer expenditure of Rs 344 was split up into Rs 208 (or 60 percent), on an average, for food, and Rs 136 for non-food.

Food included Rs 80 for cereals and Rs 68 for milk, milk products, vegetables and edible oil. Non-food included Rs 25 for fuel and light, and Rs 31 for clothing and footwear.

2.5.3 For the urban sector, average MPCE of Rs 599 split up into Rs 300 (50 percent) for food and Rs 299 for non-food. Of food expenditure, only Rs 79 went towards cereals while Rs 111 was spent on milk, milk products, vegetables and edible oil, and Rs 36 on beverages, refreshments and processed food. Of non-food expenditure, Rs 38 was spent per person per month on fuel and light, and Rs 50 on clothing and footwear.

2.5.4 Urban expenditure levels per capita exceeded rural levels for all the item groups except cereals and cereal substitutes.

2.5.5 In both rural and urban India, about Rs 5-6 of the increase shown in monthly per capita food expenditure between 1994-95 and 1995-96 is accounted by cereals and cereal substitutes. Among other components of food expenditure in rural areas, only milk & milk products show a noticeable change (Rs 5). In urban areas, milk & milk products and vegetables accounted for another Rs 12 of the net increase of Rs 29 in per capita expenditure on food per month over this period.

2.5.6 Statements 2.4R and 2.4U show the percentage composition of rural and urban MPCE by the 28 item groups for each of the 18 states and all-India. It is seen that in rural areas, the share of food in total consumer expenditure varied over the major states from 54% in U.P. to 70% in West Bengal, 68% in Assam, and 67% in Gujarat. In urban areas, the share of food was only 47% in Maharashtra, but was in the range of 56-59% in Gujarat, Rajasthan, Bihar and

West Bengal. At the all-India level the share of food in total consumer expenditure has dropped a little in rural areas (from 61% in 1994-95) and by 3 percentage points in urban areas (from 53% in 1994-95). The share of cereals in consumption expenditure was 23% in rural India and 13% in urban India.

## 2.6 Consumption of cereals

2.6.1 Statement 2.5 (R & U) shows per capita quantity and value of monthly consumption of cereals per person at state and all-India level. It may be noted here (see paragraph 2.0.7, **value of consumption**) that value of consumption of home produce is imputed at ex farm prices. The main features are summarized below.

(a) Per capita monthly consumption of cereals was about 12.9 kg in rural India and about 10.6 kg in urban India.

(b) Rice and wheat together accounted for 11.2 kg of per capita monthly cereal consumption in rural areas and nearly 10.1 kg in urban areas. Only about 500 gm of cereals other than rice and wheat was consumed per person per month in urban India as a whole.

(c) As in the previous rounds, wheat was the only cereal for which per capita consumption in urban areas exceeded that in rural areas at the all-India level.

(d) Per capita cereal consumption in rural areas exceeded that in urban areas in every major state. Consumption was highest in rural Orissa, where it was 16.8 kg (3.9 kg higher than the national average), and in rural Bihar (14.5 kg). Per capita cereal consumption was only 8.8 kg in urban Gujarat, and 9.3 kg in urban Punjab.

(e) Value of average monthly consumption of cereals was around Rs 80 for the rural sector and Rs 79 for the urban sector of the country as a whole. It was as low as Rs 49-50 in rural Punjab and Haryana, but as high as about Rs 102 in Assam (both rural & urban), Rs 114 in rural Orissa and Rs 115 in both rural and urban areas of the North-Eastern states.

2.6.2 At the national level, more detailed information on cereal consumption is available in Table 2 of Appendix A. Table 2 gives quantity in kilograms and values in rupees of per capita consumption during a period of 30 days of important cereals, gram

and cereal substitutes for 12 MPCE classes of population in each sector.

## 2.7 Trends in consumption of cereals: all-India

2.7.1 The findings of different NSS rounds from the 43rd and 47th to 52nd rounds covering the period from 1987 to 1996 on quantity and value of all-India per capita consumption of important cereals are shown in Statement 2.6 (R&U). It is observed that per capita cereal consumption in rural India is declining gradually, the decline being mainly spread over wheat and jowar. The 52nd round data for rural India are

RURAL monthly per capita exp.			item group	URBAN monthly per capita exp. (Rs.)		
51st round (Rs)	52nd round (Rs)	% in- crease		51st round (Rs)	52nd round (Rs)	% in- crease
75	80	7	cereals & cereal substitutes	73	79	8
11	13	18	pulses and pulse products	15	18	20
27	32	19	milk & milk products	49	56	14
14	16	14	edible oil	23	25	9
17	20	18	vegetables	25	30	20
10	11	10	meat, fish & egg	17	19	12
4	5	25	fruits & nuts	13	13	0
9	9	0	sugar	11	12	9
12	13	8	beverages, refreshments & processed food	34	36	6
<b>189</b>	<b>199</b>	<b>5</b>	<b>FOOD TOTAL</b>	<b>271</b>	<b>300</b>	<b>11</b>
22	25	14	fuel & light	34	38	12
25	31	24	clothing & footwear	33	50	52
15	14	-7	medical	18	22	22
16	15	-6	durable goods	23	39	70
<b>121</b>	<b>137</b>	<b>13</b>	<b>NON-FOOD TOTAL</b>	<b>237</b>	<b>299</b>	<b>26</b>
<b>309</b>	<b>344</b>	<b>11</b>	<b>ALL</b>	<b>508</b>	<b>599</b>	<b>18</b>

consistent with the findings of the previous rounds. The urban data show a decline in per capita consumption of total cereals. But, it remained almost stable since 47th round (July - December 1991).

## 2.8 Trends in composition of household MPCE: all-India

2.8.1 Statement 2.7 shows percentage break-up of household MPCE by groups of items of consumption at the all-India level for NSS rounds 43rd and 47th to 52nd, separately for rural and urban India. Here, 13 groups of food items are considered, and 8 groups of non-food items. The main points of interest are as follows.

(a) There is some indication of the

beginnings of a decline in the share of food in total expenditure from its level of 64-65% to 60% in rural India and 56-57% to 50% in urban India during the period from 1987-88 to 1995-96.

(b) Regarding the consumption of individual item-groups nothing can be said as no definite trend is observed.

(c) The shares of durable goods over the rounds are not consistent with results of the previous rounds.

## 2.9 Other trends

2.9.1 Trends, if any, in certain other parameters of interest, such as average household size, average MPCE, and selected percentiles (20th, 50th and 80th) of the distribution of persons by MPCE, may be studied from Statement 2.8, which gives data for 43rd and 47th to 52nd rounds, separately for rural and urban sectors.

**Statement 2.1R: Per thousand distribution of households in rural sector over 12 MPCE classes for 15 major states, three groups of small states and u.t.'s and all-India**

# Chapter Three

## Employment And Unemployment

### 3.0 Introduction

As indicated in Chapter One, collection of data to generate an annual series of key indicators of 'employment' and 'unemployment' was resumed with the 45th round survey operations. The collection of data for this purpose has been integrated with the annual survey on consumer expenditure with appropriate provision being made in the 'demographic' block of the schedule used for collection of data on 'consumer expenditure'.

is aimed at classifying the population into different activity categories on the basis of the activities pursued by the respondents during specified reference periods adopting two different approaches. The approaches are :

- (i) usual status approach with a reference period of 365 days preceding the date of survey .
- (ii) current weekly status approach with a reference period of 7 days preceding the date of survey.

### 3.1 Conceptual framework adopted for the survey

The various activity categories along with the corresponding codes used in the 52nd round were as follows :

3.1.1 The main objective being to generate annual indicators of employment and unemployment, the information collected

code	description
<b>working (or employed)</b>	
11	worked (self-employed) in household enterprises as own account worker
12	worked (self-employed) in household enterprises as an employer
21	worked (self-employed) in household enterprises as helper
31	worked as regular salaried/wage employee
41	worked as casual wage labour in public works
51	worked as casual wage labour in other types of work
61	did not work due to sickness though there was work in household enterprise
62	did not work due to other reasons though there was work in household enterprise
71	did not work due to sickness but had regular salaried/wage employment
72	did not work due to other reasons but had regular salaried/wage employment
<b>not working but available for work (or unemployed)</b>	
81	sought work
82	did not seek but was available for work
<b>neither working nor available for work (or not in labour force)</b>	
91	attended educational institutions
92	attended domestic duties only

contd.

code	description
93	attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), tailoring, weaving, etc., for household use
94	rentiers, pensioners, remittance recipients, etc.
95	not able to work due to disability
96	beggars, prostitutes, etc.
97	others
98	did not work due to sickness (for casual workers only)
99	children of age 0-4 years

Codes 61,62,71,72, 82 and 98 were applicable only for current weekly status approach

Persons reported as engaged in any one or more of the activities listed under the category codes 11 to 72 (11 to 51 for usual status) during the specified reference period constituted the 'working' (or employed). A person assigned the activity category code 81 or 82 (81 for usual status) was considered 'seeking and/or available for work' (or unemployed). The employed and unemployed together constituted the 'labour force'. Any person reported to be engaged in or as belonging to one or more of the activities under the categories 91 to 99 (91 to 97 and 99 for usual status) was classified as 'not in labour force'.

**3.1.2 Classification according to usual status approach:** In the usual status approach, the status of activity on which a person spent a relatively longer time of the reference period of 365 days preceding the date of survey is first considered for deciding the principal usual activity status of the person. The activities pursued by a person are grouped into three broad categories (i) working or employed, (ii) seeking or available for work i.e. unemployed and (iii) not in labour force. Within the broad principal usual category identified for a person, detailed principal status is assigned on the basis of the relative duration of time spent on different activities. A person categorised as a 'worker' or 'employed' on the basis of his principal status is referred to as principal

status worker. A 'non-worker' (on the basis of principal usual activity status) who pursued some economic activity in a subsidiary capacity was considered to be usually working in a subsidiary capacity and is referred to as 'subsidiary status worker'. These two groups viz. 'principal status workers' and 'subsidiary status workers' together constituted 'all workers' according to the usual status classification. These concepts are identical to the concepts adopted in the past NSS 50th round survey for classification of population according to usual status.

**3.1.3 Classification according to current weekly status approach:** For classification of persons according to current weekly status, they had to be initially assigned a unique activity status with reference to a period of 7 days preceding the date of survey. This posed no problem in the case of persons having only one status during the reference week. But a unique status was assigned to persons pursuing more than one activity during the week by adopting a priority-cum-major-time rule. For assigning broad activity category (status), the status of 'working' got priority over the status of 'not working but seeking/available for work' and the status of 'seeking/available for work' got priority over the status of 'not working and not seeking/not available for work'. But within the broad category of 'working' or 'not working', the detailed activity category was assigned by major

activity criterion, i.e., the activity in which a major part of time was spent was considered the current weekly activity. More specifically, a person was considered 'working' (or employed) if he was engaged in any one or more of the economic activities (11 to 72) for at least one hour on any one day of the reference week. Further, he was assigned that economic activity category (11 to 72) in which he spent major share of the working time during the reference week. A person who had not worked for even one hour on any one day of the week, but had been seeking work or had been available for work (although not seeking) at any time during the week was considered 'seeking/available for work' (or unemployed). Others were considered 'not available for work' (or not in labour force). Each member of the sample household was, thus, assigned a unique activity status for the week. Aggregates of persons under different activity statuses thus assigned provided the distribution of persons by activity during an average week of the survey period.

### 3.2 Definitions

**(a) Economic activity :** Economic activity is any activity that results in the production of goods and services that adds value to national product. Such activities include production of all goods and services for market i.e. production for pay or profit and the production of primary commodities for own consumption and own account production of fixed assets, among the non-market activities. The entire spectrum of human activity falls in two categories: economic and non-economic activities. The economic activities have two parts: market activities and non-market activities. Market activities are those that involve remuneration to those who perform it i.e. activity performed for pay or profit. These are essentially production of goods including

those of Government services etc. Non market activities are the production for own consumption of primary products and own account production of fixed assets. The full spectrum of economic activities as defined in the UN system of National Accounts is not covered in the definition adopted for the current survey or in the previous surveys. The term economic activity as adopted in the survey include:

- i) All the market activities described above i.e. the activities performed for pay or profit which result in production of goods and services for exchange.
- ii) Of the non-market activities,
  - a) all the activities relating to the agricultural sector (industry section 0 of NIC 1987) which results in the production (including gathering of uncultivated crops, forestry, collection of firewood, hunting, fishing etc.) of agricultural produce for consumption and
  - b) the activities relating to the own-account production of fixed assets. Own account production of fixed assets includes construction of own houses, roads, wells, etc., and of machinery, tools etc. for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own-account construction either in the capacity of a labour or a supervisor.

**3.2.1** In this context, it may be noted that up to the NSS 49th round the term used was 'gainful activity'. The above definition is very close to the 'gainful activity' concept except for the inclusion of own-account production of fixed assets. The contribution of this component was found to be negligible according to a

special tabulation of this component in the 43<sup>rd</sup> round survey and as such the comparability of the survey results will be unaffected by this change.

**3.2.2** According to the international standards the term 'economically active population' comprises of persons of either sex who furnish the supply of labour for production of goods and services as defined in the United Nations system of national accounts and balances during a specified time reference period. According to these systems, the production of goods and services includes all production and processing of primary products, whether for market, for barter or for own consumption, the production of all other goods and services for the market and, in the case of households which produce such goods and services for the market, the corresponding production for own consumption.<sup>1</sup> The definition adopted in the NSS follows the above approach very closely except that the 'processing of primary commodities for own consumption by the producers of these items' is not covered by the NSS definition. Further the international standards use the term 'economically active population' as a generic term and use two other measures viz. the 'usually active population' in relation to a long reference period such as a year and the 'currently active population' measured in relation to a short reference period such as a week or a day. Generally the term 'labour force' is used to denote the currently active population. In this report the term labour force is meant to imply the population comprising the employed and the unemployed. In conventional terms, the employed, unemployed and those in the labour force are defined as follows.

**(b) Workers (or employed) :** Persons who are engaged in any economic activity

---

<sup>1</sup> *Surveys of economically active population, employment, unemployment and underemployment: An ILO manual on concepts and methods, I L O , Geneva, 1990.*

or who despite their attachment to an economic activity have abstained for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work constitute workers. Unpaid helpers who assist in the operation of an economic activity in the household farm or non-farm activities are also considered as workers.

**(c) Seeking or available for work or unemployed :** Persons who owing to lack of work had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing condition of work and remuneration are considered as those 'seeking or available for work or as unemployed'.

**(d) Labour force and not in labour force:** Persons who are either 'working' or 'seeking or available for work' (i.e. unemployed) during the reference period constitute the labour force. Persons who were neither working and at the same time were not seeking nor available for work during the reference period are considered to be 'out of labour force'. The persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled, too young or too old, prostitutes, smugglers etc., and casual workers not working due to sickness etc.. However a domestic servant who is considered as a member of the employer's household is treated as a worker though he/she may be performing only household chores.

**(e) Worked as self-employed in household enterprises:** Persons who operate their own farm or non-farm enterprises or are engaged independently in a profession or trade on own-account or with one or a few partners are self-

employed in household enterprises. The essential feature of self-employment is that the remuneration is determined wholly or mainly by sales or profits of the goods or services which are being produced. The self-employed persons are further categorised into three groups.

**(i) own-account workers - usual and current status code 11:** They are the self-employed persons who operate their enterprises on their own account or with one or a few partners and who during the reference period by and large, run their enterprise without hiring any labour. They may, however, have unpaid helpers to assist them in the activity of the enterprise.

**(ii) employers - usual and current status code 12:** The self-employed persons who work on their own account or with one or a few partners and by and large run their enterprise by hiring labour.

**(iii) helpers in household enterprises - usual and current status code 21:** The helpers are mostly family members who keep themselves engaged in their household enterprises, working full or part time and do not receive any regular salary or wages in return for the work. They do not run the enterprise on their own, but assist the related person living in the same household running the enterprise. Here it is to be noted that a departure was made in the case of identifying 'helpers' from the earlier surveys. Persons who worked in the capacity of 'helpers' but had a share in their family earnings were not considered as 'helpers' in the rounds prior to NSS 50th round, but are considered so in the present survey.

**(f) Worked as regular salaried/wage employee - usual and current status code 31:** Persons working in other's farm or non-farm enterprises, both household and non-household, and getting in return salary or wages on a regular basis (and not

on the basis of daily or periodic renewal of work contract) are the regular salaried/wage employees. This category not only includes persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full-time and part-time.

**(g) Worked as casual wage labour - usual and current status code 41 & 51 :** A person casually engaged in other's farm or non-farm enterprises (both household and non-household) and getting in return wage according to the terms of the daily or periodic work contract is a casual labour. Depending on whether they are so employed in 'public works' sponsored by Govt. agencies or local bodies or in other types of work, the casual workers are classified into the two groups viz. casual labour in public works and casual workers in other types of work.

**(h) Had work in household enterprise but did not work due to sickness/ other reasons - current status code 61/62 and had regular salaried/wage employment but did not work due to sickness/other reasons - current status code 71/72 :** Persons engaged in farm or non-farm enterprises or working in others' farm or non-farm enterprises as salaried/wage employees but absenting from work temporarily due to sickness/for enjoying leave or holiday or for other reasons belong to these two categories 61/62 and 71/72 respectively depending on whether they are self-employed in household (farm or non-farm) enterprises or employed in others' (farm or non-farm) enterprises as wage/salaried employees.

**(i) Attended domestic duties and was also engaged in free collection of goods, sewing, tailoring, weaving, etc., for household use - usual and current status code 93 :** In rural areas in general and particularly in the tribal areas, domestic work usually includes, among other things, a lot of work in free collection of

vegetables, roots, firewood, etc., and in spinning and weaving of cloth for household use. Persons found to be regularly spending some of their time in performing the above activities along with household chores belong to this category.

### 3.3 Summary of findings

**3.3.1** As mentioned earlier, in NSS 52nd round, 7666 villages and 4992 blocks were surveyed covering 28834 and 19734 households in rural and urban sectors of India. Two approaches, viz. usual status and current weekly status, were followed for collection of information on employment and unemployment. The key indicators of employment and unemployment obtained from the 52nd round survey based on these two approaches are presented here. The discussions are confined to all-India estimates only. In order to have a comparative picture of the employment-unemployment situation over the period 1983 (38th round) to 1995-1996 (52nd round), corresponding results obtained from the earlier surveys are placed side by side. In view of the sample size in the NSS 52nd round as in the other annual surveys, some key estimates are presented at the broad levels only for the major states and groups of smaller states and u.t.s. in Statements 3.7 to 3.11. Statements 3.10 and 3.11, in particular, should be read with caution as the estimates are based on small sample even at the broad level. Detailed all-India tables are given in the appendix to the report.

**3.3.2** While interpreting the comparative estimates obtained from various rounds, it is to be noted that the results pertaining to 1983, 1987-88 and 1993-94 are based on quinquennial surveys with a relatively large number of sample households, while estimates for other rounds are based on the annual surveys conducted in a smaller number of households. Further the 47th and 49th rounds had a survey period of six

months only. The 47th round covered the period from July to December 1991 and the 49th round from January to June 1993.

### 3.4 Employed

**3.4.1** The estimates of number of persons employed per 1000 persons or Worker Population Ratios (WPRs), also called the Work Force Participation Rates (WFPRs), are given in **Statement 3.1** based on the usual status and current weekly status approaches. The employed - in terms of usual status, are classified into 'principal status workers' (ps) and 'all workers' (principal and subsidiary status workers taken together). The usual status approach provides the long term picture of employment and averages out the seasonal fluctuations in the activity pattern. The current weekly status approach based on a week's situation reflects the intermittent changes in the activity pattern during the year. In the following discussions the term 'usually working' is used to mean both the principal and subsidiary status workers.

**3.4.1.1** From the statement, it is seen that at the all-India level, the employment scenario has remained rather stable over the years 1983 to 1995-96. According to the usual status, the WPR for rural males is found to remain at around 55 per cent since 1989-90 (45th round) and shows a slight drop from 56 per cent in 1994-95 to 55 per cent in 1995-96. In the case of urban males, the WPR has shown an increase by nearly 1 percentage point over the previous annual round (51st round) to around 53 per cent. Some fluctuations are observed in the female work participation rates obtained from the results of annual surveys which vary from 29 to 34 per cent in the rural sector and from 12 to 16 per cent in the urban sector.

Statement 3.1: Number of persons employed per 1000 persons according to usual status and current weekly status approaches

38(1983)	528	547	511	248	340	227
URBAN						
52(1995-96)	522	525	520	107	124	109
51(1994-95)	514	519	511	112	136	117
50(1993-94)	513	521	511	121	155	139
49(Jan-June '93)	506	509	504	113	130	109
48(Jan-Dec '92)	502	507	501	125	146	122
47(July-Dec '91)	511	516	509	120	132	117
46(1990-1991)	508	513	506	123	143	124
45(1989-90)	501	512	503	124	146	121
43(1987-88)	496	506	492	118	152	119
38(1983)	500	512	492	120	151	118

3.4.1.2 The current weekly status proportions show a pattern similar to that suggested by the usual status data. As expected, they are marginally lower than

the usual status rates in most cases. Further, the current weekly status estimates of WPRs show a tendency to fall over the previous annual round (51st) except for urban males for whom it increased. The estimates, however, show a decrease from the previous quinquennial survey (1993-94) particularly for females. This may be due to the differences in the method of collection of information on employment - unemployment by current weekly status approach in the 50th round, when a detailed information on time disposition was collected for each household member and based on this information the current weekly status was derived.

**3.4.2 Age specific work participation rates (ASWPR):** The WPRs for 'all-workers' are given for certain broad age-groups in **Statement 3.2**. The detailed tables in the appendix provide ASWPR for

5 yearly age-groups. These have been plotted in the accompanying graph separately for males and females in the rural and urban sectors. From this statement, it can be seen that the WPR for

**Statement 3.2 : Number of persons usually employed (ps + ss) per 1000 persons by broad age-groups during 1995-96**

India								
age-group (years)	rural				urban			
	male		female		male		female	
	52nd rd.	51st rd.	52nd rd.	51st rd.	52nd rd.	51st rd.	52nd rd.	51st rd.
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
5-14	70	74	58	69	38	38	19	23
15-29	773	774	401	421	613	597	143	154
30-59	980	983	527	556	960	958	225	247
60 +	708	731	223	254	410	445	88	84
15-59	885	886	469	495	796	787	186	203
5 +	626	635	337	359	580	575	137	151

the 15-59 age-group, which is considered to be the active or working age-group, is 89 per cent for rural males and 80 per cent for urban males. The WPR for the 5-14 age group which represents the child labour component of the working population has been 6 to 7 percent in rural areas and 2 to 4 per cent in the urban areas. These rates have remained the same as in the previous annual round.

**3.4.3 Distribution of usually employed by category of employment:** Persons employed are categorised into three broad groups according to their category of employment. These groups are (i) self-employed, (ii) regular employees and (iii) casual labour. The distribution of the usually employed by category of employment is given in **Statement 3.3**. The basic structure of the employed as revealed from the statement shows that more than half of the employed in the rural areas are 'self-employed'. The percentages of regular employees among the employed in usual principal status in 1995-96 are about 8 for males and 2 to 3 for females in the rural sector. While the proportion of self-employed has decreased for rural males and females between the periods 1994-95 and 1995-96, in the urban sector, the changes over the activity statuses are different for males and females. The proportion of workers engaged in 'casual labour' has remained the same but the proportion of 'regular wage earners' has increased among females and decreased among males both at the cost of the 'self-employed'.

**3.4.4 Distribution of usually employed by broad groups of industry :** The shift of the work force away from the agriculture sector (primary sector) to manufacturing and tertiary sector is an important aspect in the study of the structure of employment. **Statement 3.4**

gives the per 1000 distribution of usually working by broad groups of industry. The industries (sections 0-9) are grouped as (i) primary (0), (ii) secondary (1- 5) and tertiary (6-9)<sup>2</sup>. It had been established to a large extent from the quinquennial survey results that there is a steady decrease in the percentage of usually working in the primary sector. As compared to the 51st round (1994-95), the results of the current round also show a decrease in the share of employment except for the urban females. Among them, the share of the primary sector employment has remained at the same level. Between the periods 1994-95 and 1995-96, the share of employment in the tertiary sector has increased among the females in both rural and urban areas. A comparison with the previous quinquennial (50th) round, on the contrary, shows an increase in the share of agriculture in rural areas.

### **3.5 Unemployed**

**3.5.1** For the 'unemployed' also two different estimates are obtained from the annual survey data viz. (i) persons unemployed based on the usual status classification and (ii) persons unemployed based on the weekly status classification. The first estimate relates to persons unemployed for a relatively longer period of the reference period of 365 days and approximates to an indicator of the chronically unemployed. Two estimates of the usually unemployed are presented - usually unemployed in terms of their principal status (ps) and usually unemployed excluding the subsidiary status workers (usual adjusted).

unemployment during the survey year and covers both chronic and also the intermittent unemployment caused by seasonal fluctuations in the employment of those categorised as usually employed.

### 3.5.2 Unemployment rates (UR) :

Number of persons unemployed per thousand persons in the labour force (i.e. total of employed and unemployed) is termed as the unemployment rate. **Statement 3.5.1** gives the UR along with the number of persons unemployed per 1000 persons. Compared to the previous annual (NSS 51st) round, the proportions of unemployed in the total population according to the usual status have increased slightly except for the urban

current weekly status also, a marginal decrease has been observed in the female proportions.

**3.5.3** The unemployment rate also show a similar trend between the periods 1994-95 and 1995-96. The increase is more in rural sector than in the urban sector according to usual status while it is just the opposite in the case of females in weekly status. Compared to the 50th round quinquennial survey, the unemployed proportions as well as the unemployment rates show a sharp fall in both the sectors, the fall being more prominent among the females and that too in the urban sector.

**3.5.4 Under-utilisation of labour time of the usually employed :** In an economy such as India's, where agriculture based activities are the mainstay of a majority of the population particularly in the rural areas, there is a strong possibility of under-

utilisation of the labour time or incidence of under-employment. This is because many of the agriculture and related activities can absorb a large number of persons at very low productivity level and with a marginal engagement. Moreover,

**Statement 3.5.1 : Unemployment rates (number of persons unemployed per 1000 persons in the labour force)**

**Note: The figures in the parentheses are the number of persons**

**unemployed per 1000 persons** NSS 1995-96, Household Consumer Expenditure and Employment Situation in India, 1995-96

as agriculture related activities are seasonal in nature, persons may not find enough work in lean seasons, though they may get categorised as employed as per their 'usual status'. A classification of the usually employed by their weekly status helps to reveal the dimension of real engagement of the persons categorised as employed according to their usual status. **Statement 3.5.2** gives the distribution of the usually employed (taking into account both the principal and subsidiary status employed) by their current weekly status. The corresponding results obtained from the 43rd round onwards are also presented in the statement. Compared to the last couple of annual rounds, in the 52nd round a marginal increase is noticed in the current employment of the usually employed. In other words, there is a reduction in the under-employment rate during 1995-96. Results of the 1993-94 quinquennial survey also showed a decrease in the under-utilisation of labour time for both males and females, relative to the 1987-88 survey.

### **3.6 Sub-Sample Estimates**

**3.6.1** As mentioned in the sampling design appended to the report, the first stage units are drawn in the form of two independent sub-samples of equal sizes for obtaining two independent estimates for a characteristic. Closeness of the two estimates obtained from the two sub-samples for a characteristic can be taken as an indicator of their reliability. In **Statement 3.6** below we present certain key estimates separately for each sub-sample as well as the combined sample. It can be seen that the estimates obtaining from the two sub-samples are rather close to each other.

### **3.7 Regional estimates :**

**3.7.1** In view of the small sample size in the annual surveys on consumer expenditure and employment-unemployment, the detailed state-level tables are not presented in the Appendix to

the report. Key results are, however, presented for the major states and groups of smaller states and union territories in Statement 3.7 to 3.11. The titles of statements are listed below :

**Statement 3.7 :** Per 1000 distribution of persons by broad current weekly activity.

**Statement 3.8 :** Per 1000 distribution of persons by broad usual activity (principal).

**Statement 3.9:** Per 1000 distribution of persons by broad usual activity (principal and subsidiary).

**Statement 3.10:** Per 1000 distribution of usually working persons by broad groups of industry.

**Statement 3.11 :** Per 1000 distribution of usually working persons (principal and subsidiary) by broad current weekly activity.

The first three statements give the distribution of population by broad activity status according to current weekly status, usual status (principal) and usual status (principal and subsidiary), respectively.

The distribution of usually working according to the principal status and both the principal as well as subsidiary statuses by the three broad groups of industry sections primary, secondary and tertiary are presented in Statement 3.10. Distribution of the usually employed in the principal and subsidiary statuses by broad current weekly activity ('working', 'unemployed' and 'not in labour force') is given in Statement 3.11 to get an idea about the incidence of under-employment rates.

The groups of smaller states/union territories are :

i) North Eastern : Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim & Tripura.

ii) North Western : Jammu & Kashmir, Himachal Pradesh, Chandigarh & Delhi

iii) Southern: Andaman & Nicobar Islands, Goa, Dadra & Nagar Haveli, Daman & Diu, Lakshadweep & Pondicherry

Broad activity statuses used for the purpose are :

(i) self-employed, (ii) regular employees, (iii) casual labour, (iv) unemployed, (v) students, (vi) engaged in domestic duties and (vii) others not in labour force.

The estimated total population is given in the last column of these statements for each of the states and group of states. It is to be noted that the population estimates of NSS are generally lower than the census population due to differences in coverage, methodology etc.. Therefore, these totals can be used to combine the proportions at the desired level only and should not be used for generating absolute figures under any category. To do this one is advised to apply the NSS proportions to either the census population or projected population .

In the statements and subsequent tables a '-' and '0' represent 'no sample persons in the specified class' and 'the estimated value is negligible' cases respectively.

## Appendix B

### Sample Design and Estimation Procedure (Fifty-Second Round: July 1995 - June 1996)

#### 1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, completed its fifty-first round field operations in June 1995. The survey period of fifty-second round was from July 1995 to June 1996.

#### 2. General particulars of the survey

2.1 **Subject coverage:** The 52nd round of NSS was primarily focused on health care and education including problems of the aged persons (60 years and above). The survey on consumer expenditure and employment-unemployment was also carried out based on thin samples as in the usual annual rounds. This apart, information on availability of some infra-structural facilities to the villages, relevant in the context of social consumption, was collected through a separate block in the listing schedule itself.

2.2 **Schedules of enquiry:** The whole gamut of information collected through the survey on social consumption and aged persons has been moduled into two schedules of enquiry viz., schedule 25.0 covering maternity, child care, medical services and problems of aged persons and schedule 25.2 covering education. Table (1.1) gives the list of schedules of enquiry for the 52nd round.

2.3 **Period of survey:** As mentioned earlier, the 52nd round survey was of one year's duration viz., from July 1995 to June 1996.

Table (1.1) : Schedules canvassed in  
NSS 52nd Round

srl. no.	schedule no.	description	sector
(1)	(2)	(3)	(4)
1.	0.0	List of Households	rural & urban
2.	1.0	Household Consumer Expenditure	- do -
3.	25.0	Survey on Health Care	- do -
4.	25.2	Participation in Education	- do -

2.4 **Geographical coverage:** The survey covered the whole of Indian Union excepting (i) Ladakh and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond 5 km of a bus route and (iii) villages of Andaman & Nicobar Islands which were inaccessible throughout the year.

2.5 **Work programme:** The survey period of one year of this round was divided into four sub-rounds of three months' duration each as indicated below :

sub-round	period of survey
1	July - September 1995
2	October - December 1995
3	January - March 1996
4	April - June 1996

Equal number of sample villages and blocks were allotted for survey in each of these four sub-rounds. Each village/block was generally surveyed during the sub-round period to which it was allotted. Because of arduous field conditions, this restriction could not be strictly enforced in

Andaman & Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.

### 3. Sample design

3.1 As usual, a stratified two-stage design was adopted in this round. The first-stage units were census villages in the rural sector (panchayat wards in case of Kerala) and the NSSO urban frame survey(UFS) blocks in the urban sector. The second-stage units were households in both the sectors.

#### 3.2 Sampling frame for first stage units:

The lists of census villages of 1991 census (1981 census list for J & K) constituted the sampling frame for the rural sector. For Kerala, however, the list of panchayat wards were used as the sampling frame for selection of panchayat wards in the rural sector. For Nagaland, the villages located within 5 km of a bus route constituted the sampling frame whereas, for Andaman & Nicobar Islands, the list of 'accessible' villages constituted the sampling frame. For the urban sector, the lists of NSSO Urban Frame Survey(UFS) blocks were considered as the sampling frame.

### 3.3 Stratification

3.3.1 **Rural:** In the rural sector, each district was treated as a separate stratum. However, if the 1991 census population of the district was greater than or equal to 2 million (1.8 million population as per 1981 census for J & K), the district was split into two or more strata, by grouping contiguous tehsils to form strata. In Gujarat, in the case of districts extending over more than one NSS region, the part of a district falling within each NSS region formed a separate stratum.

3.3.2 **Urban:** In the urban sector, strata were formed, within each NSS region, by grouping towns on the basis of the population of towns. The urban strata were formed as follows:

3.4 **Allocation of first-stage units (FSUs):** It was decided to select a total sample of 13,000 FSUs(rural & urban

Table (1.2): Composition of urban strata in an NSS region	
stratum no.	population size class(as per 1991 census) of towns
(1)	(2)
1	all towns with population less than 50,000
2	all towns with 50,000 - 1,99,999
3	all towns with 2,00,000 - 9,99,999
4,5	each city with population 10,00,000 or above
Note : each city with population 10 lakhs or above formed a separate stratum	

combined) for the 'central sample' at all-India level. The total sample size of FSUs (rural & urban combined) for the central sample for a state/u.t. has been allocated to its rural and urban sectors considering the relative sizes of the rural and urban population with double weightage to the urban sector. State-level rural/urban allocations were adjusted to multiples of 8. Allocation of first-stage units by state X sector is given in Table S. The state-level rural sample size was allocated to the rural strata in proportion to their rural population figures as per the census. Similarly, urban sample size of the state/u.t. was allocated to the urban strata in proportion to urban population figures as per the census. All the stratum-level allocations were adjusted to multiples of 8 as far as possible (otherwise multiples of 4). Allocations have been made multiples of 8 to the extent possible in order to allocate them equally in each sub-sample X sub-round combination (2 sub-samples X 4 sub-rounds).

**3.5 Selection of first-stage units:** Sample FSUs in the rural sector have been selected circular systematically with equal probability. In the u.t. of Daman & Diu, the district Diu consisted of only two villages which have been selected for survey in both the central and state samples. Sample blocks in the urban sector have also been selected circular systematically with equal probability. Sample FSUs of both the rural and the urban sectors have been selected in the form of two independent sub-samples.

**3.6 Arunachal Pradesh :** For the rural sector of Arunachal Pradesh, the procedure of cluster sampling has been followed. The nucleus villages have been selected circular systematically with equal probability, in the form of two independent sub-samples. A cluster, generally of 4 to 6 villages, was formed around each nucleus village.

**3.7 Selection of hamlet-groups/sub-blocks(for 'large' FSUs only):** Large FSUs were divided into a suitable number of hamlet-groups/sub-blocks having equal population content. Two hamlet-groups were selected from large FSUs in the rural sector whereas, only one sub-block was selected from large FSUs of the urban sector. The procedures of hamlet-group and sub-block formation / selection have been discussed in detail in vol. I, Instructions to field staff'. The two selected hamlet-groups in large FSUs of the rural sector were considered together as one unit for combined listing and selection of households. The number of hamlet-groups/sub-blocks formed(D) was as per the guidelines given below:

<b>rural samples</b>	
approx. present population of the FSU	value* of D
less than 1200	1
1200 - 1799	4
1800 - 2199	5
2200 - 2599	6
2600 - 2999	7
(and so on)	
<b>urban samples</b>	
approx. present population of the FSU	value of D
less than 1200	1
1200 - 1999	2
2000 - 2799	3
2800 - 3599	4
3600 - 4399	5
(and so on)	

\* For rural areas of Himachal Pradesh, Sikkim and Punch, Rajouri, Udhampur and Doda districts of Jammu & Kashmir, the values of D were D=1 for population less than 600; D=4 for population 600 to 1199; D=5 for population 1200 to 1499 and so on. D=1 implied no hamlet-group / sub-block formation.

**3.8 Selection of households (second-stage units):** From each selected FSU (or the selected hamlet-groups/sub-block of the FSU for large FSUs), a sample of 4 households for schedule 1.0 was selected for the detailed enquiry. For schedule 1.0, the households listed were arranged by their means of livelihood and then the required number (i.e. 4) of sample households were selected circular systematically with a random start.

**3.9 Number of sample villages and blocks allotted and surveyed along with number of sample households and persons are given in Table S.**

Table S: Number of villages/blocks allotted and surveyed and number of sample households and persons surveyed								
state/u.t.	number of				number of surveyed			
	villages		blocks		households		persons	
	allotted	surveyed	allotted	surveyed	rural	urban	rural	urban

\*Figures denote number of panchayat wards

\*\*24 nucleus villages (assumed as 144 villages) for Arunachal Pradesh

#### 4. Estimation Procedure

4.1 The following notations are used in the sequel:

- s= subscript for s-th stratum
- i= subscript for i-th sample village/block
- j= subscript for j-th second-stage stratum of a sample village/block
- k= subscript for k-th sample household
- b= subscript for b-th sub-sample
- $N_s$  = total number of villages/blocks in the frame of s-th stratum
- $n_s$  = number of villages/blocks surveyed( including uninhabited and 'zero cases' but excluding casualty and other not received cases) in the s-th stratum , for any particular schedule type

D= total number of hamlet-groups/sub-blocks formed in the sample village/block (D=1,4,5,6 for rural samples and D=1,2,3,4..... for urban samples)

The notation  $D'$  used for the rural sector is described as :

$$D' = D \text{ for } D=1 \text{ and } D' = \frac{D}{2} \text{ if } D \geq 4$$

H= total number of households listed in the FSU

h= number of households surveyed and used for tabulation

x, y= values of the characters x & y

$\bar{X}$   $\bar{Y}$  = estimate of population totals of the characters x , y

4.2 Estimates of aggregates: The formula for obtaining  $\bar{Y}_s$ , the estimate of aggregate

of any character y for the s-th stratum, are given below for schedule 1.0. These formulae may be used to obtain sub-sample wise estimates first and then pooled estimate may be obtained as the simple average of the sub-sample wise estimates.

$$\text{Rural: } \bar{Y}_s = \frac{N_s}{n_s} \sum_{i=1}^{n_s} D'_{si} \frac{H_{si}}{h_{si}} \sum_{k=1}^{h_{si}} y_{sik} \dots(1)$$

$$\text{Urban: } \bar{Y}_s = \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \frac{H_{si}}{h_{si}} \sum_{k=1}^{h_{si}} y_{sik} \dots(2)$$

**4.3 Sub-sample estimates:** Sub-sample estimates are computed on the basis of villages and blocks surveyed in the concerned sub-sample. Thus  $n_s$  in the above formula would mean the number of surveyed villages/blocks (available for tabulation including uninhabited and zero cases) in the concerned sub-sample of s-th stratum.

**4.4 Sub-sample estimates by schedule type for sch.1.0:** There were two types of sch.1.0. Thus estimates may be generated by schedule type within the sub-sample. So  $n_s$  in the formula for sch.1.0 would mean the number of surveyed villages/blocks (available for tabulation including uninhabited and zero cases) of the concerned schedule type in the concerned sub-sample of s-th stratum.

**4.5 Treatment of casualty cases:** If  $n_s$  is found zero for a particular sub-sample, the estimate for this sub-sample can not be obtained. In this case, the estimate for this sub-sample may be taken as the estimate based on the other sub-sample. If  $n_s$  is zero for both the sub-samples, such cases may be referred to SDRD for giving necessary direction for merging with the other stratum. For schedule 1.0, if  $n_s$  becomes zero for a particular schedule type within a sub-sample, the estimate in

this case (i.e. for the sub-sample) will be taken as the estimate based on the same sample type belonging to the other sub-sample. Cases with  $n_s = 0$  for both the sub-samples of a particular schedule type (sch. 1.0) may be referred to SDRD for suggesting appropriate methodology at the time of tabulation.

**4.6 Combined estimate:** The combined estimate based on the whole sample may be computed as the simple average of the sub-sample estimates. Thus if  $\bar{Y}_{s1}$  and  $\bar{Y}_{s2}$  be the sub-sample estimates of s-th stratum total, the combined estimate may be obtained as

$$\bar{Y}_s = \frac{1}{2} \sum_{b=1}^2 \bar{Y}_{sb} \dots\dots\dots(3)$$

**4.7 Estimate of aggregates at state/u.t./region level:** Let  $\bar{Y}_b$  be the estimate of aggregate at state/u.t./region level from b-th sub-sample and  $\bar{Y}_c$  the combined estimate of aggregate at state/u.t./region level based on the whole sample, then

$$\bar{Y}_b = \sum_s \bar{Y}_{sb} \dots\dots\dots(4)$$

and

$$\bar{Y}_c = \frac{1}{2} (\sum_s \bar{Y}_{s1} + \sum_s \bar{Y}_{s2}) \dots\dots\dots(5)$$

**4.8 Estimate of ratios:** If X be the population total of the variable x for the state/u.t./region, its estimate  $\bar{X}_b$  or  $\bar{X}_c$  are obtained exactly in the same manner as above after replacing y by x. Then the estimate of ratio  $R = \frac{Y}{X}$  is obtained as

$$\bar{R}_b = \frac{\bar{Y}_b}{\bar{X}_b}, \text{ based on sub-sample b.}$$

&  $\bar{R}_c = \frac{\bar{Y}_c}{\bar{X}_c}, \text{ based on the whole sample.}$
