

Report No. 513(61/1.0/6)

# **NUTRITIONAL INTAKE IN INDIA 2004-2005**

**NSS 61<sup>ST</sup> Round  
July 2004- June 2005**

**National Sample Survey Organisation  
Ministry of Statistics & Programme Implementation  
Government of India**

**May 2007**

## **PREFACE**

The National Sample Survey Organisation (NSSO) conducts socio-economic surveys covering various subjects on regular basis. Subjects are selected keeping in view their importance. As part of the NSS 61<sup>st</sup> round during the period July 2004 – June 2005, the Household Consumer Expenditure survey was conducted on large sample basis and this was the seventh quinquennial survey on the subject. The survey covered all the States and UTs in the country. The data were collected from a sample of 79298 rural and 45346 urban households spread over 7999 villages and 4602 urban blocks respectively.

This report is one of a series of seven reports to be brought out on the basis of the data collected through the survey. It presents the information on nutritional intake by the Indian population. Among the different nutrients only three nutrients – viz. calorie, protein and fat – are discussed in this report. This report gives an idea about intake of these nutrients in different monthly per capita expenditure classes from different items of food. This report also presents information on whether meals were taken at home or not, and if not, whether the meals were taken from school, balwadi, employer or consumed by purchasing while away from home. Estimates are presented at the level of State / UT, separately for rural and urban sectors.

Chapter One of the report serves as the introduction. Chapter Two presents Sample Design and Estimation Procedure. Chapter Three gives the concepts and definitions used in the survey. The main findings of the survey are given in Chapter Four. Detailed tables at the State/UT and all-India level are given in Appendix A. A facsimile of the schedule used for data collection is given as Appendix B.

Development of sampling design and survey instruments, and preparation of the report, were undertaken by the Survey Design and Research Division of the NSSO. The field work was handled by the Field Operations Division. Data processing and table generation was done by the Data Processing Division. The Coordination and Publication Division was responsible for overall coordination of all activities of NSSO, including the data dissemination and release of the reports. The Chairman and Members of the then Governing Council of NSSO, along with the Chairman and Members of the Working Group set up for this round, provided the technical directions and guidance at every stage of the survey. I am grateful to all of them.

I hope, the report will be useful to planners, policy makers and researchers. Comments and suggestions are most welcome.

New Delhi  
May 2007

P. K. Ray  
Director General & Chief Executive Officer  
National Sample Survey Organisation

# Highlights

## Results at a glance...

- ❖ Focus of this report is mainly on nutritional intakes of the Indian households as reflected in the reported consumption of food in the seventh quinquennial consumer expenditure survey of the NSSO during the 61<sup>st</sup> round covering the period from June 2004 to July 2005.
- ❖ The consumer expenditure survey shows that the percentage share of food expenditure in total expenditure by Indian population was 55.0% in the rural areas and 42.5% in the urban areas. Relative to the comparable survey results for 1993-94, the share of food expenditure has dropped by 8.2 and 12.2 percentage points in rural and urban areas respectively.
- ❖ At all India level the number of meals eaten at home by household members had decreased by 0.57% in the **rural areas** between 1993-94 and 2004-05. In **urban India** popularity of home kitchen had declined by 1.66% over last ten years.
- ❖ Average daily intake of calories by rural population has dropped by 106 kcal (4.9 percent) from 2153 kcal to 2047 Kcal from 1993-94 to 2004-05 and by 51 Kcal (2.5 percent) from 2071 to 2020 Kcal in the urban area.
- ❖ Population reporting a calorie intake level of “less than 100%” of the norm of 2700 kcal, formed 66 percent of the total in rural areas and 70 percent of the total in urban areas.
- ❖ Average daily intake of protein by the Indian population has decrease from 60.2 to 57 grams in the rural area between 1993-94 and 2004-05 and remain stable around 57 grams in the urban area during the same period.
- ❖ A significant rise in per capita daily average intake of fat is observed during the decades (1993-94 to2004-05) in both rural and urban areas. It has increased from 31.4 gms. to 35.5 gms. (13.1 percent) in rural areas and from 42 gms. to 47.5 gms. (13 percent) in urban areas.

# **NUTRITIONAL INTAKE IN INDIA 2004-2005**

## **Survey Findings**

# Chapter One

## Introduction

- 1.0 **The National Sample Survey Organisation (NSSO)** was set up in 1950, with the objective of having a permanent survey–conducting machinery to collect data on various facets of the economy through nationwide sample surveys. The National Sample Surveys (NSS) are organized in the form of successive "rounds", each round usually of a year's duration, covering several topics of current interest during a survey period. At present each NSS round covers, at the all-India level, about 12,000 to 14,000 villages and urban blocks in the *Central sample* (covered by the Central government agency NSSO) and an independent sample of about 14,000 to 16,000 villages and blocks in the *State sample* (covered by the Governments of various states and union territories). The entire area of the country - rural and urban - is covered, with the exception of some interior inaccessible areas of Nagaland and Andaman & Nicobar Islands, and Ladakh and Kargil districts of Jammu & Kashmir.
- 1.1 **Historical background:** It was originally the practice to collect data on household consumer expenditure in every round of NSS, starting from the very first round (1950-51). From 1972-73, according to a decision of the Governing Council of NSSO, the consumer expenditure survey became a quinquennial feature and was also integrated with the employment and unemployment survey in the sense that a common sample of households was subjected to both the enquiries. However, independent samples of households for these two enquiries has been canvassed in the quinquennial surveys since the 55<sup>th</sup> round. An annual series of consumer expenditure surveys was again launched from the 42<sup>nd</sup> round (1986-87) to fill the data gaps which planners and researchers had begun to feel. It is the larger-scale quinquennial surveys, however, which are widely used for the study of changes over time in the level of consumer expenditure and of the emergence of new spending patterns. So far, seven quinquennial surveys of consumer expenditure have been conducted and these are the 27<sup>th</sup>, 32<sup>nd</sup>, 38<sup>th</sup>, 43<sup>rd</sup>, 50<sup>th</sup> and 55<sup>th</sup> rounds of NSS. They relate, respectively, to the years 1972-73, 1977-78, 1983, 1987-88, 1993-94, 1999-2000 and 2004-05.
- 1.2 The present report on nutritional intake in India is based on data collected through the 61<sup>st</sup> round of NSS (July 2004-June 2005). It was the seventh quinquennial survey on Consumer Expenditure and Employment-Unemployment. This report is the sixth in the series on the consumer expenditure survey of that round. It mainly focuses on intake of nutrients by households in terms of protein, fat and carbohydrates and their conversion into energy units in terms of calories derived from consumption of different groups of food items. It also presents information on the number of meals taken at home and away from home either free or on payment that has been used to make a crude adjustment\* to the reported energy intakes to approximate the actual energy intakes. [\* See 3.26 and 3.27 below and Minhas, B.S. (1991) : "On Estimating the Inadequacy of Energy Intake : Revealed Food Consumption Behaviour versus Nutritional Norms (Nutrition Status of Indian People in 1983)", the *Journal of Development Studies*, vol 28, no. 1(October), pp 1-38.]

- 1.3 The basic data released through the present report are:
- Average no. of meals consumed per household at home and obtained elsewhere on payment or free from specific sources (as perquisite, from school, etc.) during a period of 30 days for each MPCE class.
  - Average no. of meals consumed per person at home and obtained elsewhere on payment or free from specific sources (as perquisite, from school, etc.) during a period of 30 days by age and sex.
  - Per capita and per consumer unit intake of calorie, protein and fat per day by MPCE class.
  - Percentage of total intake of calorie and protein derived from different groups of food items by households in each MPCE class.
  - Percentage distribution of calorie intake over different food groups, and average intake of calorie, protein and fat per consumer unit per day, separately for households in different ranges of calorie intake (per consumer unit per day).
  - Per 1000 distribution of households by level of calorie intake (per consumer unit) for each MPCE class
  - Per 1000 distribution of persons by level of household calorie intake (per consumer unit) for each MPCE class
  - Per 1000 distribution of households by adjusted level of calorie intake per consumer unit per day by reported calorie intake level per consumer unit per day
- 1.4 With a view to studying the trend, the estimates of nutritional intake based on the present survey have been compared with the estimates from the various quinquennial surveys on consumer expenditure conducted during NSS 27<sup>th</sup>, 38<sup>th</sup>, 43<sup>rd</sup>, 50<sup>th</sup> and NSS 55<sup>th</sup> round , respectively.
- 1.5 The Sample Design and Estimation Procedure followed in the NSS 61<sup>st</sup> round survey is given in Chapter 2. Chapter 3 presents important concepts and definitions adopted in the survey and used in this report. The survey findings on the *Nutritional intake* of Indian households are presented in Chapter 4. The detailed tables have been provided for each State, UT and all-India in Appendix tables.

## Chapter Two

# Sample Design and Estimation Procedure

### 2 Outline of Survey Programme

- 2.1 **Subject Coverage:** The 61<sup>st</sup> round (July 2004-June 2005) of NSS was earmarked for survey on 'Household Consumer Expenditure' and 'Employment and Unemployment'. This quinquennial survey was the seventh in the series, the last one being conducted in the 55<sup>th</sup> round (1999-2000) of NSS.
- 2.2 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.
- 2.3 **Period of survey and work programme:** The period of survey was of one year duration starting on 1<sup>st</sup> July 2004 and ending on 30<sup>th</sup> June 2005. The survey period was divided into four sub-rounds of three months duration each as follows:

sub-round 1 :	July - September 2004
sub-round 2 :	October - December 2004
sub-round 3 :	January - March 2005
sub-round 4 :	April - June 2005

In each of these four sub-rounds equal number of sample villages/blocks (FSUs) was allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempt was made to survey each of the FSUs during the sub-round to which it has been allotted. *Because of the arduous field conditions, this restriction could not be strictly enforced in Andaman and Nicobar Islands, Lakshadweep, rural areas of Arunachal Pradesh and Nagaland.*

- 2.4 **Schedules of enquiry:** During this round, the following schedules of enquiry was canvassed:

Schedule 0.0	: list of households
Schedule 1.0	: consumer expenditure
Schedule 10	: employment and unemployment

## 2.5 Sample Design

- 2.5.1 Outline of sample design:** A stratified multi-stage design had been adopted for the 61<sup>st</sup> round survey. The first stage units (FSU) were the 2001 census villages in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large villages/blocks requiring hamlet-group (hg)/sub-block (sb) formation, one intermediate stage was the selection of two hgs/sbs from each FSU.
- 2.5.2 Sampling Frame for First Stage Units:** *For the rural sector*, the list of 2001 census villages (panchayat wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available Urban Frame Survey (UFS) blocks was used as the sampling frame.
- 2.5.3 Stratification:** Within each district of a State/UT, two basic strata were formed: (i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district. However, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of them was formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum. There were 27 towns with population 10 lakhs or more at all-India level as per census 2001.

## 2.6 Sub-stratification:

- 2.6.1 Rural sector:** If 'r' be the sample size allocated for a rural stratum, the number of sub-strata formed would be 'r/2'. The villages within a district as per frame would be first arranged in ascending order of population. Then sub-strata 1 to 'r/2' would be demarcated in such a way that each sub-stratum will comprise a group of villages of the arranged frame with more or less equal population.
- 2.6.2 Urban sector:** If 'u' be the sample size for a urban stratum, 'u/2' number of sub-strata would be formed. The towns within a district, except those with population 10 lakhs or more, would be first arranged in ascending order of population. Next, UFS blocks of each town would be arranged by *Investigator unit no*<sup>1</sup>. × block no. in ascending order. From this arranged frame of UFS blocks of all the towns, 'u/2' number of sub-strata would be formed in such a way that each sub-stratum would have more or less equal number of UFS blocks.
- 2.6.3** For towns with population 10 lakhs or more, the urban blocks would be first arranged by IV (investigator unit) unit no. × block no. in ascending order. Then 'u/2' number of sub-strata would be formed in such a way that each sub-stratum would have more or less equal number of blocks.
- 2.6.4 Sample size – first-stage units:** As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a "State sample" was surveyed by State Government officials in addition to the "Central sample" surveyed by NSSO. For rural India, 8124 villages formed the Central sample for this round. Of these, 7999 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was

---

<sup>1</sup> One investigator unit (IV unit) amounts to 600 to 700 blocks. Codes for investigator unit is used as identification particular.

4660 blocks, of which 4602 were surveyed. This report is based on the estimates obtained from the Central sample only.

- 2.6.5 Allocation of total sample to States and UTs:** The total number of sample FSUs was allocated to the States and UTs in proportion to population as per census 2001 subject to the availability of investigators ensuring more or less uniform work-load.
- 2.6.6 Allocation of State/UT level sample to rural and urban sectors:** State/UT level sample was allocated between two sectors in proportion to population as per *census 2001* with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu etc. should not exceed the rural sample size. A minimum of 8 FSUs would be allocated to each state/UT separately for rural and urban areas.
- 2.6.7 Allocation to strata:** Within each sector of a State/UT, the respective sample size would be allocated to the different strata in proportion to the stratum population as per census 2001. Allocations at stratum level would be adjusted to a multiple of 4 with a minimum sample size of 4.
- 2.6.8 Selection of FSUs:** Two FSUs were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 2001 from each sub-stratum of a district of rural sector. For urban sector, from each sub-stratum two FSUs were selected by using Simple Random Sampling Without Replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both the rural and urban sectors.
- 2.6.9 Criterion for hamlet-group/sub-block formation:** After identification of the FSU, it is to be determined whether listing was to be done in the whole sample FSU or not. In case the population of the selected village or block was found to be 1200 or more, it was divided into a suitable number (say, D) of ‘hamlet-groups’ in the rural sector and ‘sub-blocks’ in the urban sector as stated below.

approximate present population of the sample village/block	no. of hgs/sbs to be formed
less than 1200 (no hamlet-groups/sub-blocks)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

Two hamlet-groups/sub-blocks were selected from a large village/UFS block wherever hamlet-groups/sub-blocks had been formed, by SRSWOR. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

- 2.6.10 Listing of households:** Having determined the hamlet-groups/sub-blocks, i.e. area(s) to be considered for listing, the next step was to list all the households (including those

found to be temporarily locked after ascertaining whether locking was temporary through local enquiry). The hamlet-group/sub-block with sample hg/sb number 1 would be listed first and that with sample hg/sb number 2 will be listed next.

## 2.7 Formation of Second Stage Strata and allocation of households

For both Schedule 1.0 and Schedule 10, households listed in the selected village/block/hamlet-groups/sub-blocks would be stratified into three second stage strata (SSS) as given below.

**2.7.1 Rural:** The three second-stage-strata (SSS) in the rural sector were formed in the following order:

- SSS 1: relatively affluent households
- SSS 2: from the remaining households, households having principal earning from non- agricultural activity
- SSS 3: other households

**2.7.2 Urban:** In the urban sector, the three second-stage strata (SSS) were formed as under:

Two cut-off points, say 'A' and 'B', based on MPCE of NSS 55<sup>th</sup> round, were determined at **NSS Region level** in such a way that top 10% of households have MPCE more than 'A' and bottom 30% have MPCE less than 'B'. Then three second-stage-strata (SSS) were formed in the urban sector in the following order:

- SSS 1: households with MPCE more than A (i.e.  $MPCE > A$ )
- SSS 2: households with MPCE equal to or less than A but equal to or more than B (i.e.  $B \leq MPCE \leq A$ )
- SSS 3: households with MPCE less than B (i.e.  $MPCE < B$ )

**2.7.3** The number of households to be surveyed in each FSU is 10 for each of the schedules 1.0 and 10. Composition of SSS with number of households to be surveyed for both schedule 1.0 and schedule 10 would be as follows:

SSS	composition of SSS	no. of hhs to be surveyed	
		without hg/sb formation	with hg/sb formation (for each hg/sb)
<b>rural</b>			
SSS 1:	relatively affluent households	2	1
SSS 2:	of the rest, households having principal earning from non- agricultural activity	4	2
SSS 3:	other households	4	2

<b>urban</b>			
SSS 1:	households with MPCE > A	2	1
SSS 2:	other households with MPCE equal to or less than A but equal to or more than B ( i.e. $B \leq MPCE \leq A$ )	4	2
SSS 3:	households with MPCE less than B	4	2

**2.8 Selection of households for Schedules 1.0 and 10:** From each SSS the sample households for both the schedules was selected by SRSWOR. If a household was selected both for schedule 1.0 and schedule 10 only schedule 1.0 was canvassed in that household and the household was replaced by next household in the frame for schedule 10.

**2.8.1** Table P1 shows the number of villages and urban blocks allotted for survey and the numbers actually surveyed, and the number of households in which the consumer expenditure schedule, “Schedule 1.0”, was canvassed.

**P 1: Number of villages/blocks allotted and surveyed for Schedule 1.0 and number of households and persons surveyed: Central sample**

State/UT	no. of villages		no. of blocks		sample households		sample persons	
	allotted	surveyed	allotted	surveyed	rural	urban	rural	urban

**In rural area total number of villages surveyed was 7999. Out of which 55 villages were found to be either uninhabited or became urbanized ('0' cases). In urban area the total number of de-urbanized or uninhabited blocks were 44. As a result, household level data were collected from 7944 villages and 4558 urban blocks.**

## 2.9 Estimation Procedure

### 2.9.1 Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU [village (panchayat ward) / block]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb (j = 1, 2 or 3)

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample village (panchayat ward) / block

$D^* = 1$  if  $D = 1$

=  $D / 2$  for FSUs with  $D > 1$

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural sub-stratum ( sum of sizes for all the FSUs of a rural sub-stratum )

z = size of sample village used for selection.

n = number of sample village / block surveyed including zero cases but excluding casualty for a particular sub-sample and sub-stratum.

H = total number of households listed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

$\hat{X}$ ,  $\hat{Y}$  = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

$y_{stmidjk}$  = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum;

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

### 2.9.2 Formulae for Estimation of Aggregates for a particular sub-sample and stratum in Rural / Urban sector:

#### 2.9.2.1 Rural:

Estimation formula for a sub-stratum:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

### 2.9.2.2 Urban:

Estimation formula for a sub-stratum:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

### 2.9.3 Estimate for a stratum:

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

### 2.9.4 Overall Estimate for Aggregates:

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

### 2.9.5 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

### 2.9.6 Estimates of Ratios:

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) will be obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}.$$

# Chapter Three

## Concepts and Definitions

- 3.0** **The concepts and definitions** followed in the seventh quinquennial survey on household consumer expenditure are more or less the same as in the earlier rounds. The concepts and definitions of the terms used or relevant to the present report are given below.
- 3.1** **Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.
- 3.2** **Adult:** A person who has completed 15 years of age.
- 3.3** **Household size:** The size of a household is the total number of persons in the household.
- 3.4** **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.
- 3.5** For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the *ex farm* or *ex factory* rate. For evaluating the consumption of the items of group (iii), i.e., items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the expenditure made during the

reference period for the purchase or acquisition of goods and services is considered as consumption.

**3.6** It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household *and also* by the guests during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan advance, etc. made by the household are not considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item "cooked meals" is an exception to the rule. Meals prepared in the household kitchen and served to the employees and/or guests would automatically get included in domestic consumption of employer (server) household. There is a practical difficulty for the employees/guests in estimating the quantities and values of individual items used for preparing the meals served to them by their host. Thus, for the convenience of collecting reliable information and as a convention to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are *not* recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests and employees will also be recorded in the purchaser household.

**3.7** This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, donors of free cooked meals are likely to be concentrated at the upper end of the per capita expenditure range and the corresponding recipients at the lower end of the same scale. Consequently, the derived nutrition intakes may get inflated for the rich (net donors) and understated for the poor (net recipients). This point has to be kept in mind while interpreting the NSS consumer expenditure data for any studies relating to the nutritional status of households. An adjustment to nutrient intakes on the basis of the meal accounting suggested by Minhas (1991)\* has been attempted in this report. [\* See. Section 1.2.]

**3.8. Consumer unit:** Consumer unit is the rate of equivalence of a normal person determined on the basis of age-sex composition of a person. It is usual to assess the calorie needs of men, women and children in terms of those of the average man by applying various coefficients to the different age-sex groups. Consumer unit of a normal male person doing sedentary work and belonging to the age group 20-39 is taken as one unit and the other coefficients are worked out on the basis of calorie requirements. To facilitate comparisons between calorie requirements of persons of different ages and sexes the conversion table shown below has been used. Alternatively Consumer unit is a normative rate of equivalence of a given age-sex specific person in relation to a 'standard' male person aged 20-39 years and doing sedentary work who is taken to be equivalent to one consumer unit. Statement 2 provides the age-sex specific equivalence units used in this report.

**Statement 2: Number of consumer units assigned to a person**

age in completed years	male	female
(1)	(2)	(3)
less than 1	0.43	0.43
1-3	0.54	0.54
4-6	0.72	0.72
7-9	0.87	0.87
10-12	1.03	0.93
13-15	0.97	0.80
16-19	1.02	0.75
20-39	1.00	1.71
40-49	0.95	0.68
50-59	0.90	0.64
60-69	0.80	0.51
70+	0.70	0.50

**3.9. Valuation of consumption:** Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of

consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

- 3.10. **Monthly per capita consumer expenditure (MPCE):** For a household, this is the total consumer expenditure over all items divided by its size and expressed on a per month (30 days) basis. A person's MPCE is understood as that of the household to which he or she belongs.
- 3.11. **Reference periods:** The reference periods used for collection of consumption data for different groups of items are given below:

Item of consumption	Reference period
clothing, footwear, education, medical care (institutional) and durable goods (Infrequent-expenditure Categories)	"last 30 days" and "last 365 days"
all other items (viz all food, pan, tobacco & intoxicants, fuel and light, miscellaneous goods and services including non-institutional medical care, rents and taxes)	last 30 days

- 3.12. **MPCE class:** The MPCE classes are normally revised during quinquennial surveys of Consumer Expenditure. Usually, 12 MPCE classes are formed from a table giving estimated cumulative percentage frequency distribution of persons by MPCE for rural and urban sector separately. The upper limits of these classes correspond broadly to cumulative frequencies 5%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 95% and 100% of the population. The class limits are given below:

Codes used for MPCE Class	Sector-wise MPCE classes	
	rural	urban
	MPCE class (Rs.)	MPCE class (Rs.)
01	0 - 235	0 - 335
02	235 - 270	335 - 395
03	270 - 320	395 - 485
04	320 - 365	485 - 580
05	365 - 410	580 - 675
06	410 - 455	675 - 790
07	455 - 510	790 - 930
08	510 - 580	930 - 1100
09	580 - 690	1100 - 1380
10	690 - 890	1380 - 1880
11	890 - 1155	1880 - 2540
12	1155 & more	2540 & more
	<b>all classes</b>	<b>all classes</b>

- 3.13. **Major States:** This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Together, these States accounted for nearly 94.7% of India's population in 2001.

- 3.14 **\*Nutrients** : A wide range of nutrients are necessary to a person for performance of various bodily functions and also to lead a healthy life. The nutrients include **proteins, fat, carbohydrate, vitamins and minerals**. These nutrients are chemical ingredients which are present in the food consumed. The foods containing these nutrients which we consume daily are classified as cereals, pulses, nuts & oilseeds, vegetables, fruits, milk & milk products and also foods fleshy in nature (fish, meat & poultry).
- 3.15 **\* Protein, fat and carbohydrate** are some times referred to as proximate principles. They get oxidized in the body to yield **Energy** which the body needs. Although proteins provide energy, their primary function is to provide amino acids for building body proteins. Fats, particularly the vegetable oils, besides being a concentrated source of energy, provide essential fatty acids which perform function akin to vitamins in the body. Vitamins and minerals do not supply energy but they play an important role in the regulation of the metabolic activity in the body and help in the utilization of the proximate principles.
- 3.16 **\*Proteins** : Proteins are one of the most important nutrients required by the body and should be available in adequate amounts in the diet. The protein needed by the body has to be supplied through the diet we consume. All foods except refined sugar, oil and fats contain protein to varying degrees. Some foods contain high amount of protein and can be classified as protein rich foods. Example of such foods are animal foods like meat, fish and egg and plant foods like pulses, oil seeds and nuts. Milk also can be classified under this category if due allowance is made for large amount of water in it. These foods contain over 20% protein and soyabean is the richest source containing over 40% of protein. Cereals are moderate source of protein as they contain about 10% protein. Rice contain less protein (7%) than wheat(approx. 10%) and other cereals. Leafy vegetables, fruits, roots, tubers are generally poor sources of protein as they contain less than 2% protein. Using the widely used standard (Kjeldahl) method, the protein values were calculated from the nitrogen contents and the conversion factor used was 6.25 for all the food stuffs.
- 3.17 **\*Fats** : Fat is an important component of diet and serves a number of functions in the body. Fat is a concentrated source of energy and per unit weight, it supplies more than twice the energy furnished by either of protein or carbohydrate. It also imparts palatability to a diet and retards the pace of emptying stomach. Presence of fat in the diet is important for the absorption of fat soluble vitamins like vitamin A and carotene present in the diet. Apart from these functions, some fats, particularly those derived from vegetable sources provide what is known as "essential fatty acids" (EFA) which has vitamins like functions in body. Fats in the diet can be of two kinds, the visible and invisible fat. The visible fats are those derived from animal fats like butter, ghee which are solid fats and those derived from vegetable fats like groundnut, mustard, coconut, safflower, til which are liquid fats. The invisible fats are present in other food items like cereals, pulses, oilseeds, milk, egg, meat etc. This invisible fat is believed to contribute significantly to the total fat and essential fatty acid contents of diet depending upon the nature and quantity of food stuff present in the diet. The values of fat relate to the total ether extractives and measured in gm.

---

\* Ref: Nutritive value of Indian foods by C. Gopalan et al, National Institute of Nutrition, Hyderabad

- 3.18 \***Carbohydrates** : Carbohydrates are a class of energy yielding substances which include starch, glucose, cane sugar, milk etc. Grain foods and roots & tubers are largely composed of starch, a complex carbohydrate. Food ingredients like simple sugars namely cane sugar, glucose are pure carbohydrate. Glucose derived from starch and other sugar present in the diet is the main source of energy in the body. Carbohydrates derived from cereals form chief source of energy in Indian diets.
- 3.19 \* **Energy** : Protein, fat and carbohydrates are mainly the energy yielding components of a diet. Proteins normally supply 10-12% of energy in most diets; energy that carbohydrate and fat contribute may vary from diet to diet. It is desirable that the energy from fat should not exceed 30% and the rest may be derived from carbohydrate (60%). Quantitative food requirements are usually estimated in terms of energy. The unit of measuring energy is calories which is the amount of heat necessary to raise the temperature of one kg. of water by 1°C from 14.5°C to 15.5°C. The calorie unit of measurement of food items is 1000 times the conventional calorie unit of energy. Hence in some studies the unit of energy - nutrient notations like "kcal" (i.e. kilo calories or 1000 calories ) or simple "cal" are used. Throughout this report however, only calories has been used to represent the unit of energy for nutrition which is one thousand times of a conventional calorie unit.

- 3.20 **Food commodities by Major Groups** : A classification of food commodities into 10 major food groups as in the given table (Statement 3) has been framed. Energy intake is presented as a break-up over those 10 groups which usually contribute towards generation of energy in the body when consumed.

<b>Statement 3: Classification of food item groups</b>			
food group no.	name of the food group	food group no.	name of the food group
(1)	(2)	(1)	(2)
I	cereals and cereal substitutes	VI	meat, eggs & fish
II	roots and tubers	VII	milk & milk products
III	sugar and honey	VIII	oils & fats
IV	pulses and nuts and oilseeds	IX	misc. food, food product & beverages
V	vegetables and fruits	X	alcoholic beverages

- 3.21 **Meal** : One or more readily eatable (generally cooked) items of food with cereal as its usual major constituent, for the purpose of consumption of a person is termed as a MEAL. Energy and other nutrients for normal living and pursuing normal vocations are provided by the meals when consumed daily once or more by a human being.

Ref: Nutritive value of Indian foods by C. Gopalan et al, National Institute of Nutrition, Hyderabad

- 3.21.1 Meal taken while away from home - free** : The 'meals taken while away from home' are those which are provided free by (i) employer(s) to him, (ii) schools/balwadis as mid-day meal and (iii) other households during ceremonial or other occasions to the person as guest/visitor or otherwise.
- 3.21.2 Meal taken while away from home - on payment** : The 'meals taken while away from home-on payment' are those which are obtained from hotels/restaurants, eating houses etc., or from office/factory canteens by payment or on credit or purchase at subsidised rate.
- 3.22 **Cereal substitute** : Normally cereals are a major constituent of a person's staple diet. But at times by choice or due to reasons of scarcity, some people may not opt for much of cereals or no cereal at all. Then the cereal requirement may be made up by such consumption as of Tapioca, Mahua, Jack Fruit Seeds etc. which are cereal substitutes. However Potato or sweet potato consumed as substitute of cereals are considered as root-vegetables and not as cereal substitutes in an accepted sense of the term.
- 3.23 **"Norm" Level of Calorie Intake** : Speaking about determination of calorie requirement of a person in terms of age and/or sex is a simplification of the real situation, since the role of various other conditions such as body weight, height, nature of work, state of health and so on can not be overlooked as determinant cofactors. Thus requirement of calorie per consumer unit in reality is not a fixed amount but a variable depending upon all these factors. Nutritionists, attempting to assess calorie requirements per consumer unit, differ in their approaches to the problem, some specifying calorie requirement as function of body weight, while others assign requirements depending on nature of work (sedentary/moderate/heavy). From the 26th round, the NSS has been using a level to the tune of 2700 calories per consumer unit per day as a standard and measure of actual intake may be compared with it. This level (2700 calories per consumer unit per day) is referred to & reported as the "norm" level of calorie intake.
- 3.24 **Adjustment of level of calorie intake per diem per consumer unit** : In the current round also, data were collected on the quantity and value of food items consumed by the households during a period of last 30 days preceding the date of enquiry. The quantity estimates of the food items consumed by a household were measured in units of calorie after application of conversion factors appropriate to the items of food. The estimates of total calorie equivalent of all food consumed by the household during the reference period is derived thus by aggregation over different groups (components) of food. Finally, the required figure on the level of calorie intake per diem per consumer unit was calculated by sub-dividing this aggregate by the product of the number of consumer units in the household and the duration of the reference period i.e., 30 days.
- 3.25 It is important to underline that the average estimate of calorie intake per consumer unit per diem, so derived, may not necessarily represent the 'true' level of intake of a household for two reasons. Firstly, there may be members of the household who might have consumed food from their employers (without payment) or while as guests in other households or children in the household may have received free mid-day meals from schools/balwadis. These free meals eaten outside home and hence their nutrient content would be omitted from the consumer

expenditure of the recipient households as recipients would not be able to recollect the detailed ingredients going into the meals eaten outside. Secondly, persons other than the household members might have been entertained as guests during ceremonies or on any other occasions with food which though not consumed by household members, gets included in the consumer expenditure of the meals-serving household but the guests are justifiably not counted as members of households. While the former is likely to depress the *reported* per capita level of calorie intake of the household, the latter will have a tendency to inflate it. Hence, to bring the estimate of calorie intake level closer to 'true' intake, the following adjustment procedure has been suggested\*. This is based on the information on the number of meals eaten by household members at home and those served to guests and employees as well as free meals eaten outside home by household members. This information is being collected in the quinquennial rounds of consumer expenditure surveys since the 38<sup>th</sup> round.

3.26 Food reported to be consumed by a household may be broken up into three components in terms of number of meals viz.,

- (i) number of meals consumed by the household member in the household ( $M_h$ );
- (ii) number of meals consumed by guests ( $M_g$ ),
- (iii) number of meals consumed by employees ( $M_e$ ),

3.27 All these three components are accounted in the total reported food consumption. But, the food received by members of households free ( $M_f$ ) as guest or as employees does not enter in the reported consumption. Apart from the three types of meals enumerated above, information on number of meals consumed outside home and not included in the consumer expenditure for the household, was separately collected. With this set of information the derived level of calorie intake per diem per consumer unit for a household ( $C$ ) can be adjusted as ( $C_a$ ) to get a better approximation to the 'true' calorie intake of that household.

The suggested adjustment by Minhas is given by

$$3.28 \quad C_a = C \frac{M_h + M_f}{M_h + M_g + M_e}$$

3.29 Notice that the adjustment factor would exceed unity for the poor households who would generally be recipients from free meals much more than servers of food to guests and employees. It would be less than unity for richer households who would generally serve more meals to outsiders than receive them.

### 3.30 Nutrition Chart

Nutrient contents of different items are largely based on "Nutritive Values of Indian Foods" by C. Gopalan, B.V. Ramasastry and S.C. Balasubramanian, revised and updated by B.S. Narasinga, Y.G. Deosthale and K.C. Pant, 1991.

Generally, the total intake of calorie, protein and fat from an item is derived from the quantities reported as consumed by the sample households. The nutrient contents of each item per unit of quantity (as specified in the schedule) are shown in the table below.

---

\* See Minhas, B.S.(1991) : "On Estimating the Inadequacy of Energy Intakes : Revealed Food Consumption Behaviour versus Nutritional Norms (Nutritional Status of Indian People in 1983)," *The Journal of Development Studies*, vol. 28, No. 1(October), pp 1-38.

For some items having variable food content, average nutrient contents per rupee are given in the table instead of per unit of quantity. For such items the unit has been shown as “Re”. These figures multiplied by the *value* of consumption give the total quantities of nutrients derived from that item.

The chart of nutrient contents remains practically the same as for the 55<sup>th</sup> round of NSS. The only differences are those due to change in unit of collection of data, e.g., “litre” in place of “glass”. For items for which the unit (as explained above) is “Re”, the fall in value of the rupee since the 55<sup>th</sup> round (1999-2000) has been adjusted for by deflating the nutrient contents by the appropriate consumer price index (CPI for Agricultural Labourers for rural and CPI for Urban Non-Manual Employees for urban areas). Thus for these items, there are two sets of nutrient content coefficients – one for rural and the other for urban households.

## Chapter Four

### Survey Findings

- 4.0 **The major components** of food are: carbohydrates, proteins, fats, vitamins and minerals. These are called nutrients. It is needless to emphasize the importance of data on intake levels of nutrients of the people of a country for understanding their general health status. The measures of nutritional intake status also reflect the adequacy of available food to the people. This report is mainly focused on nutritional intakes of Indian households. Data on HOUSEHOLD CONSUMER EXPENDITURE help in the generation of different kinds of indicators enable us to study the sources and patterns of nutritional intake of different sections, groups or classes of the population and the population in different States of the country. The present report analyses the nutrition status revealed by the consumer expenditure survey of the 61<sup>st</sup> round of NSS.
- 4.0.1 Discussion starts with average size of the household and meals accounting exercise. The information on the number of meals taken is collected for each member of household and has three components viz. taken at home, taken outside home but free and taken outside home on payment. Since meals taken at home, the largest component of the three has direct bearing on the nutrient intake of Indian households, this has been studied for different MPCE classes, different age-sex groups of persons and for major states.
- 4.0.2 Estimated values of per capita and per consumer unit "INTAKE OF NUTRIENTS" viz. (a) PROTEIN (b) FAT (in grams) (c) CALORIE (in Kcal.) and the number of units of energy or quantity of nutrients as the case may be, derived from different food groups are presented for both RURAL and URBAN sectors of states and also for the country as a whole.
- 4.0.3 Per thousand distribution of households and persons with household calorie intake as a percentage of normative level of calorie intake has also been discussed for different MPCE classes and for different states for both the sectors.
- 4.0.4 An estimate closer to actual intake of calorie has been attempted by refining the reported one by an adjustment factor on the basis of meals accounting exercise. The details of the procedure of adjustment and its application have also been discussed in this report.
- 4.0.5 Finally the results of this round have been compared with those of earlier rounds of NSS for an examination of movements in nutritional indicators over time.
- 4.0.6. At this stage it may be mentioned that, notwithstanding the availability of survey data for all the states and union territories of the Indian union, in this report, attention has primarily been focused on the results of 17 major states viz., 1)Andhra Pradesh(ANP), 2)Assam(ASM), 3)Bihar(BHR), 4)Gujarat(GUJ), 5)Haryana(HAR), 6)Chhatisgarh(CHG) 7)Jharkhand(JHR), 8)Karnataka(KTK), 9)Kerala(KRL), 10)Madhya Pradesh(MAP), 11)Maharashtra(MAH), 12)Orissa(ORI), 13)Punjab(PUN), 14)Rajasthan(RAJ), 15)Tamil Nadu(TMN), 16)Uttar

Pradesh(UTP) and 17)West Bengal(WEB) in the discussion in subsequent paras on various aspects with the aid of specially prepared statements 1- 9.

4.0.7. The detailed tables in respect of all the states & union territories of the Indian union are presented in Appendix - I.

4.1.1. **Number of Meals Consumed Per Household at Home, Away from Home - Free/On Payment: Inter-state, Sector-wise Situation.** In **statement 1**(page 39) data on average number of meals consumed per household at home and while away from home either free or on payment have been given MPCE class-wise for both the sectors of Indian population.

4.1.2 In the **rural sector** it was observed that *total* number of meals consumed *per household* in the reference period varies in the range 261 in MPCE class Rs. 1155 & more to 419 in Rs. 235-270 whereas the corresponding national figure was **348**. In **Urban area** it varied in the range 183 in highest MPCE class to 405 in lowest MPCE class and the corresponding national figure was **296**. The households belonging to the lowest MPCE class consumed highest number of free meals (26) per household and the highest 4 MPCE classes consumed least number of free meals (9) in the reference period, in the **rural area**. In the **urban area** the corresponding figures are 21 free meals consumed by lowest MPCE class and 5 free meals by the highest 3 MPCE classes. Meals taken on payment were very few and mainly found highest MPCE class of both **rural**(5) and **urban**(11) area of the country. On an average the members of the rural households had taken 2.5 meals and that of urban households taken 2.3 meals per day during the reference period as derived from the statement 1. The following statement T1 is an attempt to study whether the number of meals taken at home has undergone any change over 50<sup>th</sup> round. The comparison is limited to few comparable major states for different sectors.

<b>Statement T1: percentage change in meals taken at home over last 10 years for comparable major states as well as for different sectors.</b>						
STATE	Rural			Urban		
	2004-05	1993-94	Percentage change over 10 years	2004-05	1993-94	Percentage change over 10 years
Andhra Pradesh	314	339	-7.37	281	310	-9.35
Assam	387	352	9.94	267	292	-8.56
Gujrat	287	318	-9.75	278	274	1.46
Haryana	395	413	-4.36	346	318	8.81
Karnataka	328	377	-13.00	263	303	-13.20
Kerala	354	368	-3.8	337	336	0.30
Maharashtra	313	332	-5.72	276	277	-0.36
Orissa	366	363	0.83	311	299	4.01
Punjab	439	445	-1.35	380	383	-0.78
Rajasthan	376	386	-2.59	304	316	-3.80
Tamilnadu	314	326	-3.68	302	311	-2.89
West Bengal	325	325	0.00	238	237	0.42
<b>ALL</b>	<b>348</b>	<b>350</b>	<b>-0.57</b>	<b>296</b>	<b>301</b>	<b>-1.66</b>

4.1.3 At all India level the number of meals taken at home had decreased by 0.57%, major states having undergone similar declines were Karnataka (-13.0%), Gujarat (-75%), Andhra

Pradesh (-7.37%) whereas in West Bengal it remained unchanged in the **rural area**. In **urban India** prevalence of home-cooked meals had gone down by 1.66% over last eleven years. The leading contributors were Karnataka (-13.2%), Andhra Pradesh (-9.35%), Assam (-8.56%) whereas the it had increased for states like Haryana (8.81%), Gujarat (1.46%) and West Bengal (0.42%).

4.1.4 Number of meals taken at home, free or on payment in case meals had been taken outside home during the reference period for different age group and different sex has been presented in **statement 2**[page 40]. This information for major states has been given in **statement 2A**[page 42]. No significant gender difference has been observed so far as the meals taken at home or away from home for all age group together and for both the sectors. In rural sector out of 73.80 meals taken in 30 days period by men folks of all age group, 71.09 meals taken at home and 2.71 meals taken outside home while the women members of all age groups of the households had taken 71.42 out of 73.76 meals at home and 2.34 meals outside home. For both the sex roughly one day in a month meals had been taken outside home.

4.1.5 Meals taken outside home were mainly concentrated among the age group 5-9 and 10-14 years for both the sex in all the sectors. Among the meals taken outside home in these age groups, most were from schools or Balwadi, might be in the form of ‘*Mid-day Meals*’. (see statement T2.). Both in rural and urban area, meals taken on payment were a rare phenomenon.

Statement T2: Number of Meals taken outside home for selected age groups.				
Age group in years	Away from home		From school or balwadi	
	M	F	M	F
Rural				
5-9	6.72	6.91	6.02	6.13
10-14	4.09	3.67	3.21	3.11
All ages	2.71	2.34	1.33	1.24
Urban				
5-9	4.02	4.47	2.89	3.32
10-14	2.78	2.62	1.47	1.57
All ages	3.1	2.01	0.49	0.52

However in urban area, in the age group 15-29 and 33-44, about 2.26 and 1.64 meals respectively were taken on payment by males. Overall 3.87 and 3.00 meals had been taken from outside in a month by the male folks of these two age groups of the urban populace.

4.1.6. State wise information has been given in the statement 2A[page 42]. Here also once again, no gender difference was found in the data. Punjab and Kerala households preferred to have almost 3 meals a day at home on an average during the month. This was true for both males and females. The phenomenon was similar in both the rural and urban sectors in the reference month. Gujarat, West Bengal and few other major state preferred more or less 2 meals a day in urban sector. More than 90% of meals were taken at home only.

4.2.1 **Per capita and per consumer unit rural-urban and inter-state intake of calorie, protein and fat per diem by MPCE: Statement 3** [page 43] shows per capita and per consumer unit intake of calorie, protein and fat per diem by MPCE class, along with percentage of total expenditure spent on food and cereal separately for rural and urban areas of the country. While the intake of calorie was observed to be lower, the level of protein and fat consumption was considerably higher than the standard minimum requirement per diem per consumer unit in both the sectors. A higher intake of calorie and protein was observed in the

rural India (2540 kcal and 70.8 gms.) as compared to urban India (2475 kcal & 69.9 gms.) whereas, the consumption of fat was relatively much lower in rural areas (44.0 gms.) compared to that in urban areas (58.2 gms.).

Chart 1R: Per consumer unit calorie intake (Rural)

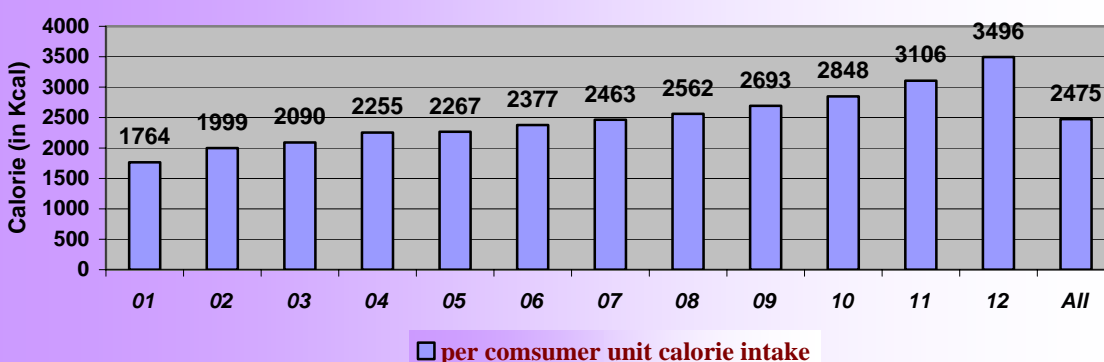

Chart 1U: Per consumer unit calorie intake (Urban)

- 4.2.2 Although the percentage of total expenditure spent on food and cereal is a decreasing function of MPCE (see Statements T3R and T3U), actual food expenditure per capita rises over the MPCE classes and the per capita or per consumer unit per diem intake of each of the three nutrients under study – calorie, protein and fat – is an increasing function of MPCE. These relations have also been observed in 61<sup>st</sup> round consumer expenditure data.(chart 3) All the intake levels were very low for persons belonging to the lower MPCE classes and quite high for the persons belonging to the higher MPCE classes. [see para 3.12 page-22]

Statement T3R: Percentage expenditure on cereal, food other than cereal and nonfood items by MPCE class for rural households

MPCE Class	01	02	03	04	05	06	07	08	09	10	11	12	All

Chart 2: Percentage expenditure on cereal, food other than cereal and nonfood items by MPCE class

4.2.3 **Statement 3A** [page 44] shows per capita and per consumer unit intake of calorie, protein and fat per diem for both the rural and urban population of different states. Significant inter-state variation in the per capita and per consumer unit intake of calorie, protein and fat is observed in each of the two sectors. Some states at the higher end of the average intake of calorie per consumer unit per diem were Punjab (2763), Uttar Pradesh (2743) and Rajasthan (2714) in the **rural areas** and Jharkhand (3013), Bihar (2683) and Punjab (2614) in the **urban areas**. On the other hand, Karnataka (2276) and Tamil Nadu (2294) in the **rural areas** and Maharashtra(2261), Karnataka(2385) and Tamil Nadu (2394) in the **urban areas** were found to have much lower intake of calorie than the Indian average. In terms of per capita calorie intake, Assam, Bihar, Haryana, Punjab, Rajasthan, West Bengal and Uttar Pradesh were higher than the national average of 2047 Kcal. Only Punjab, Rajasthan, Bihar and Uttar Pradesh showed higher per capita intake of protein than the national average(57.0 grams). Gujarat, Haryana, Kerala, Maharastra, Punjab, Rajasthan and Uttar Pradesh reported more per capita fat intake than the national average (35.5 grams.) in the **rural areas**. In **urban areas** about 10 major states were above the national average of 2020 Kcal. in terms of per capita calorie intake. Eight major states reported higher per capita protein intake than the national

average of 57.0 grams. In terms of fat intake five states are above the national average of 47.5 grams.( see the chart given in highlights of the report)

- 4.3.1 Looking at the percentage intake of calorie from cereals and cereal substitutes and percentage intake of protein from different items of food by monthly per capita expenditure classes for rural and urban India presented in **statement 4** [page 45], it is observed that the major part of the nutrients was derived from the cereals. At **national** level, out of the total calorie intake, more than **67%** calorie intake in the **rural areas** and **56%** in **urban areas** (see **chart-3**) were derived from cereals alone.

- 4.3.2 Of the average intake of protein in the country, more than 66% in the **rural sector** and 56% in the **urban sector** was derived from cereals. These proportions *decline* progressively with the *rise* of per capita expenditure level, both in rural and urban areas. However percentage of total intake of protein derived from other types of food groups showed an opposite trend, i.e., the proportions *increase* consistently with the *rise* of per capita expenditure for both the rural and urban sectors.

**Chart 4: Percentage of protein derived from various groups of food**

- 4.3.3 Cereals constitute the major source of protein as a nutrient. Cereal substitutes as a source of protein are next in importance followed by pulses, milk & milk products and meat, fish and egg in the rural India while in the urban India, the share of cereal substitutes was largest followed by "milk & milk product" "pulses" ( with a marginally lower share and "meat, fish and egg"( see chart-4 ).
- 4.3.4 In the **rural areas**, the people of Orissa (79%), Chhatisgarh (78%) and Jharkhand (75%) reportedly derived around 75% of actual intake of calorie from cereals. On the other hand, people of Punjab (50%), Haryana (54%) and Kerala (54%) reported a smaller percentage of calorie intake from cereals. So far as the **urban sector** is concerned, people of Orissa (70%), Chhatisgarh(65%) and Bihar(64%) were found to derive much higher share of average intake of calorie from cereals compared to the Indian average (56%) whereas people of Punjab (47%), Gujarat (47%) and Kerala(51%) reported lower than all-India average share.(see **Statement 4A**)
- 4.3.5 **Columns (4) to (8) of statement 4A** [page 46] gives the percentage of total intake of protein from five major food groups, viz., **i) cereals, ii) pulses, iii) milk & milk products and iv) meat, fish and egg and other food**. For all the states, cereals are the primary source of protein in both rural and urban areas. In the **rural areas**, *pulses* are the next major source of protein for Tamil Nadu, Chhatisgarh and Bihar whereas, the major group *milk and milk product* which is second to cereals as a source of protein for the people of Gujarat, Haryana, Punjab and Rajasthan. The people of rural areas of Kerala and West Bengal have reportedly depended on the major group *meat, fish and egg* as the source for protein intake next to cereals.
- 4.3.6 The picture is somewhat similar in case of **urban areas** so far as the proportion of intake of protein from sources of food other than the dominant one of cereals is concerned. Among the states, Tamil Nadu (14%), Punjab (23%) and Kerala (23%) have reported the second highest percentage of total intake of protein from pulses, milk and milk products and meat, fish and egg respectively as sources.
- 4.4.1 **Percentage distribution of calorie intake per consumer unit per diem over different food groups : sector-wise comparison.** **Statements 5**[page 47] shows the distribution of intake (calorie) over nine different food groups (the details of the groups are given in Chapter three, para 3.19). The tenth group i.e., "Alcoholic Beverages" for which conversion factors are not readily available has not been considered for the purpose of finding out the distribution of the relevant nutrients.
- 4.4.2 **Food group I**, i.e. cereals shown in **column (3)** of statement 5 includes cereal substitutes but excludes Tapioca (dry and green). So far as the calorie intakes from the various food groups are concerned, the major source of energy reported by all the states in both the sectors, are cereals. Next in order of importance are oils & fats (food group VIII) followed by milk & milk products (food group VII) for both rural and urban India. Pulses, nuts & oilseeds (food group IV) and sugars and honey ( food group III) are found to be making significant contributions (about 5-7%) to the total intake of calorie by the population of both the sectors of the country.

4.4.3 About 32% of calorie intake is derived from food group II to IX (**non-cereals**) in **rural India** whereas contribution of **non-cereals** towards calorie intake is about 43% in the **urban India**.

<b>Statement T4: Percentage of non-cereal contribution to calorie intake</b>			
sector	50 <sup>th</sup> round	55 <sup>th</sup> round	61 <sup>st</sup> round
Rural	29%	32%	32%
Urban	41%	45%	43%

4.4.4 Out of this 32%, oils and fats (food group VIII – 7%), milk and milk products (food group VII – 6%), pulses, nuts & oilseeds (food group IV – 5%), and sugar and honey (food group III – 5%) made notable contributions to the total intake of calorie. In urban areas also, the picture is the similar; only the proportions of calorie intake from non-cereals was relatively higher (43%) and the contributions to total calorie intake from the four groups mentioned above were 11%, 9%, 7% and 6% respectively.

<b>Statement T5: Percentage distribution of calorie intake over different food groups, per consumer unit per day, separately for households in different MPCE classes</b>											
MPCE class	Consumer unit per households	% calorie from food group									all

All	3.93	67.54	2.95	4.78	4.98	2.23	0.76	6.42	7.36	2.98	100.00

4.4.5 The statement T5 and T6 gives the MPCE class-wise share of calorie intake from different components of the food group. In the **rural areas** the share of calorie intake from protein rich and fat rich groups namely, vegetables and fruits (group V), fish egg & meat (group VI), milk & milk product (group VII) and oil & fat (group VIII) is an increasing function of MPCE class. Out of these milk & milk product contributes highest percentage of calorie intake (about 11%) in the higher MPCE classes. In the lower MPCE classes the oil & fat is the second major contributor in calorie intake. In **urban areas** the picture is almost identical except for intensity. About 13% share of calorie intake comes from milk and milk product and about 12% from oil & fat group.

**Chart 5: Percentage intake of calorie from protein rich and fat rich food group**

4.4.6 The picture presented in statement 5 indicates that major proportion (68% in rural & 57% in urban) of calorie intake is derived from cereals both in rural and urban; consumption of food other than cereals is not much favoured by the rural households, may be due to reasons of either lack of preference for or local non-availability or non-affordability of, these items for consumption.

**Chart 6: Percentage share of calorie intake from non-cereal food groups by major states for different sectors**

4.4.7 The percentage share of non-cereal food groups contributing towards calorie intake across states is presented in **statement T7 and chart 6**. Apart from disparity among the states the statement T7 also gives an indication of differences in the food habits of the people of different states. For example, the people of Punjab, Rajasthan and Haryana particularly favoured “milk & milk product” as a non-cereal source of calorie. The food group “Fish,

egg & meat” was preferred in Orissa, Kerala and West Bengal. Likewise “pulses nuts & oil seeds” had larger share of calorie intake among the non cereal food groups in the states of Chhattisgarh, Karnataka, Maharashtra and Tamil Nadu.

4.5.1 **Distribution of household and persons by level of calorie intake in relation to norm and by monthly per capita expenditure (MPCE) class:** It was explained in chapter three that calorie intake levels have been reported as percentage of a "norm" requirement of 2700 kcal per consumer unit (hereafter we call it PCU) per diem. Eight PCU calorie intake levels as a percentage of normative requirement have been distinguished for presenting the estimated distributions. These are (in per cent) :I) < 70 II) 70 - 80 III) 80 - 90 IV) 90 - 100 V) 100 - 110 VI) 110 - 120 VII) 120 - 150 VIII) 150 & above.

4.5.2 **Statement 6** [page 49] has been drawn without taking into account the *meal accounting exercise* given in statements 1 and 2. It shows per 1000 distribution of *households* by MPCE class and by class-intervals of actual calorie intake level *as per cent of normative level of 2700 Kcal.* for **rural as well as urban areas** at the national level. It may be noticed that the households with lower calorie intake level in relation to norm (i.e. less than 100%) tend to be clustered in the lower MPCE classes and the households with higher calorie intake level in relation to norm (exceeding 100%) are concentrated in the upper MPCE classes; an observation true for both the sectors. The households in the **lower Calorie intake level of less than 80% of the norm** are found to be concentrated in the lower MPCE classes in both Rural and Urban areas. More than 80% of households of the lowest MPCE class and two-third of the households of the second lowest MPCE class had **calorie intake level of less than 80 per cent of the norm.** As expected for the higher MPCE classes, we find households with **calorie intake level** higher than 100% of the norm. Thus, more than 80 per cent of the households in the topmost MPCE class reported more than 100 per cent of the normative calorie level. These percentages of deficits as well as excesses of calorie intakes in relation to normative level of 2700 Kcal have to be interpreted cautiously in the light of the indicative evidence of meal accounting discussed in para 3.25 and presented in Statement 1.

This evidence shows that free meals eaten outside home are concentrated at the lower end of the MPCE but are not counted against the receiving households. In the survey, they get counted against the serving households thereby the calorie intakes of serving households getting inflated in relation to actual. If crude adjustment suggested in para 3.27 were made, the deficits in calorie intake in relation to norm for the poorer households would be reduced and correspondingly the surpluses of the richer households would undergo downward adjustment. State-wise distribution of households according to levels of deficits or excesses in relation to normative calorie intake are presented in Statement 6A [page 50] for rural and urban areas separately. ( See charts 7R and 7U)

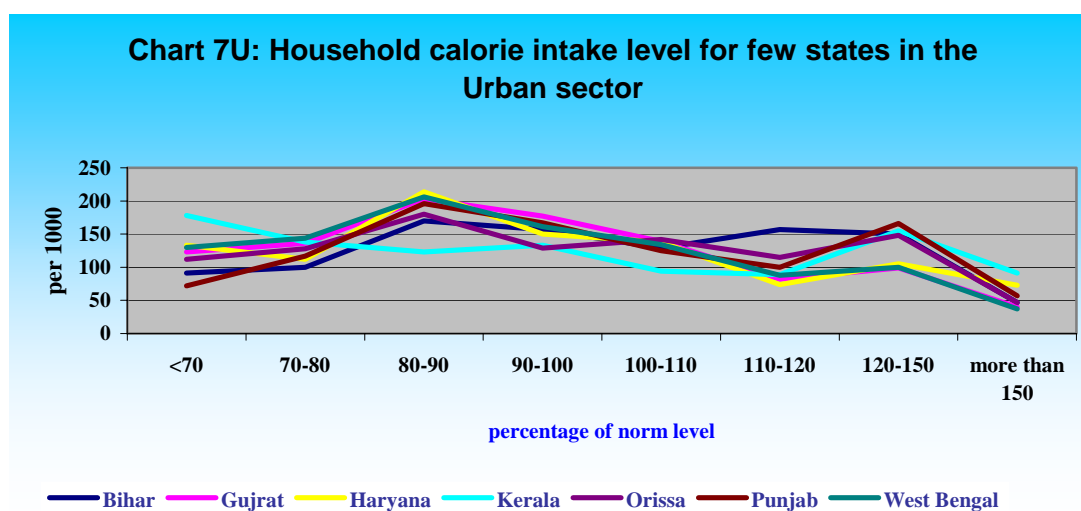

4.5.3 **Statement 7** [page 51] shows per 1000 distribution of *persons* by level of reported household calorie intake PCU per diem as percentage of and by MPCE class for **rural as well as urban areas** at the national level. The distribution and pattern of calorie intake level was similar to the distribution of *households* presented in Statements 6 and 6A. (See charts 7R and 7U ).

4.5.4 Statistically, statements 6 and 7 are the conditional distributions of calorie intake level conditional on the level of MPCE. The cross-tabulations in statements 6 and 7 show the frequency distribution of number of households or number of persons, as the case may be in

each calorie intake level in relation to normative level of 2700 Kcal for each MPCE class. One can observe a bell-top curve with modal value (or values in the case of bimodal curves) in the middle MPCE classes and tapering tails in opposite directions in the lower or higher MPCE classes. The chart 7R and 7U give the marginal distributions of households with respect to calorie intake levels percentage of norm and MPCE class-class interval for a few states.

- 4.5.5 One can observe that the frequency distributions are mostly bi-modal for almost all the states. The first peak reaches at about calorie intake level of 80-90% of the norm and second peak at 120-150% of the norm with large inter-state variability.

- 4.5.6 **Statement T8** illustrates the bi-modal nature of the joint distribution between percentage of normative calorie intake level per PCU per diem and percentile position of population as per

their monthly per capita expenditure. It shows the *joint probability distribution with a multiplicative factor of 1000* of persons between class intervals of actual calorie intake level per PCU per diem as per cent of norm and class intervals of Monthly per Capita Expenditure as defined in chapter three (see para 3.12) for rural and urban households. It can be observed that for both rural and urban areas, one mode is located in the bottom 70 per cent of the population and less than 100 per cent of the normative calorie intake and another in the top 30 percentile of the population and more than 100 Per cent of normative calorie intake. This clearly brings out the existence of bi-modal bi-variate joint distribution. Perhaps the first attainment of second mode by the percentile of population indicates the change of consumption pattern of the household.

**Statement T8 : Per 1000 distribution of persons between calorie intake level as per cent of normative level and MPCE**

MPCE class	per 1000 no. of persons with household calorie intake level*								
	<70	70-80	80-90	90-100	100-110	110-120	120-150	≥ 150	All

\* Percentage of norm level (2700 calories per consumer unit per day)

4.5.7 It may be noted that the average estimate of calorie intake per consumer unit per diem (reported in the earlier discussion) may not necessarily represent the ‘true’ level of intake of a household (see para 3.25). Given the inherent limitations of survey practices, two types of problems may arise. Firstly, there may be members of the household who might have consumed food from their employers (without payment) or while as guests in other households or from the schools/balwadis distributed as free mid-day meals. Secondly, persons other than the household members might have been entertained as guests during ceremonies or on any other occasions with food which though not consumed by household members, gets included in the consumer expenditure of the household. Omission of the former by the recipient household is likely to depress the reported per capita level of calorie intake of that household, and the inclusion of the latter in the household expenditure of the serving household will tend to inflate the reported intake of that household as guests are not members of the serving household. Hence, to bring the estimate of calorie intake level closer to the ‘true’ intake level, adjustment procedure given in the Chapter 3 (para 3.24, 3.25 and 3.26) on the basis of the supplementary information on the *number* of meals can be followed. This ‘adjusted’ calorie intake level provides a reasonable approximation to the ‘true’ level.

4.5.8 The **statement 8** [page 53] presents a conditional distribution of ‘adjusted’ calorie intake level (on the basis of number of meals) against reported calorie intake level both being in terms of per cent of the normative level of 2700 Kcal. The diagonal elements of **statement 8** give the percentage of households whose reported and ‘adjusted’ calorie intake level was in the same range as per cent of normative intake. Figures in Statement 8 to the *right* of the diagonal indicate the percentage of households in each *reported* intake category whose ‘adjusted’ intake was *higher* than the reported one. For this set of households, the reported deficits/excesses in relation to norm get mitigated/inflated as a result of free meals eaten outside the households. Not surprisingly, the significant entries are mostly in the lower actual intake bracket. Converse is true with respect to entries to the *left* of the diagonal. In other words, reported deficits/excesses in relation to normative intake get accentuated/reduced for this set of households. As expected, significant entries are found mostly in the higher actual calorie intake brackets.

\*\*\*\*\*

Statement 1: Average number of meals consumed per household at home and obtained elsewhere on payment or free from specific sources (as perquisite, from school, etc.) during a period of 30 days for each MPCE class

MPCE class	average household size [0.00]	average no. of meals consumed per household over 30 days						no. per 1000 persons reporting '0' meals	estd. no. of hhs (00)	estd. no. of per-sons (00)	sample hhs	sam-ple per-sons	
		at home	away from home				all						
			free										on pay-ment
			from school, bal-wadi, etc	from empl-oyer as per-quisite or part of wage	oth-ers	all

**GOVERNMENT OF INDIA  
NATIONAL SAMPLE SURVEY ORGANISATION  
SOCIO-ECONOMIC SURVEY  
SIXTY-FIRST ROUND: JULY 2004 - JUNE 2005**

**SCHEDULE 1.0: CONSUMER EXPENDITURE**

<b>[0] descriptive identification of sample household</b>	
1. state/u.t.:	5. hamlet name:
2. district:	6. ward/inv. unit/block:
3. tehsil/town:	7. name of head of household:
4. village name:	8. name of informant:

<b>[1] identification of sample household</b>											
item no.	item	code				item no.	item	code			
1.	srl. no. of sample village/ block					11.	sub-sample				
2.	round number	6		1		12.	FOD sub-region				
3.	schedule number	0	1	0		13.	sample hamlet-group/sub-block number				
4.	sample (central-1, state-2)					14.	second stage stratum				
5.	sector (rural-1, urban-2)					15.	sample household number				
6.	state-region					16.	srl. no. of informant (as in col.1, block 4)				
7.	district					17.	response code				
8.	stratum					18.	survey code				
9.	sub-stratum					19.	reason for substitution of original household (code)				
10.	sub-round										

**CODES FOR BLOCK 1**

*item 17: response code : informant: co-operative and capable -1, co-operative but not capable -2, busy -3, reluctant - 4, others - 9*

*item 18: survey code : original – 1, substitute – 2, casualty – 3*

*item 19: reason for substitution of original household : informant busy -1, members away from home -2, informant non-cooperative -3, others - 9*

\* tick mark ( ✓ ) may be put in the appropriate place.

[2] particulars of field operations												
srl. no.	item	investigator			assistant superintendent			superintendent				
(1)	(2)	(3)			(4)			(5)				
1.	i) name (block letters)											
	ii) code											
2.	<b>date(s) of :</b>	DD	MM	YY	DD	MM	YY	DD	MM	YY		
	(i) survey/inspection											
	(ii) receipt											
	(iii) scrutiny											
	(iv) despatch											
3.	number of additional sheets attached											
4.	total time taken to canvass schedule 1.0 (in minutes)											
5.	signature											

[12] perception of household regarding sufficiency of food					
1.	do all members of your household 'get enough food every day'?				
		(yes: every month of the year-1, some months of the year -2; no: no month of the year-3)			
2.	if code is 2 in item 1, during which calendar months did any member of the household not 'get enough food every day'?				
(applicable month codes may be recorded in the box spaces: Jan-01, Feb-02, Mar-03, Apr-04, May-05, Jun-06, Jul-07, Aug-08, Sep-09, Oct-10, Nov-11, Dec-12)					
3.	whether information on item 1 was actually obtained from the informant (yes-1, no-2)				

[3] household characteristics									
1. household size					16. dwelling unit code ( <i>owned-1, hired-2, no dwelling unit-3, others-9</i> )				
2. <b>principal industry (NIC-1998)</b>	description:				primary source of energy for	17. cooking (code)			
	code (5-digit)					18. lighting (code)			
3. <b>principal occupation (NCO-1968)</b>	description:				19. is any member of the household a regular salary earner? ( <i>yes-1, no -2</i> )				
	code (3-digit)				20. does the household possess ration card? ( <i>yes-1, no -2</i> )				
4. household type (code)					21. <b>if yes in item 20</b> , type of ration card (code)				
5. religion (code)					22. Food for Work				
6. social group (code)					23. Annapoorna				
7. whether owns any land ( <i>yes-1, no -2</i> )					24. ICDS				
8. <b>if yes in item 7</b> , type of land owned ( <i>homestead only – 1, homestead and other land – 2, other land only – 3</i> )					25. Midday Meal				
land as on the date of survey (in 0.000 hectares)	9. owned and possessed				26. did the household perform any ceremony during the last 30 days? ( <i>yes – 1, no – 2</i> )				
	10. leased-in				27. no. of meals served to non-household members during the last 30 days				
	11. neither owned nor leased-in				28. 30 days ( item 36, bl.13)				
	12. leased-out				29. 365 days (item 46, bl.13)				
	13. total possessed [items (9+10+11-12)]				monthly per capita expenditure (Rs.0.00)				
during July 03 to June 04	14. land cultivated (0.000 ha)								
	15. land irrigated (0.000 ha)								

## CODES FOR BLOCK 3

item 4: **household type** : for rural areas: *self-employed in non-agriculture-1, agricultural labour-2, other labour-3, self-employed in agriculture-4, others-9*

for urban areas: *self-employed-1, regular wage/salary earning-2, casual labour-3, others-9*

item 5: **religion** : *Hinduism-1, Islam-2, Christianity -3, Sikhism-4, Jainism-5, Buddhism-6, Zoroastrianism-7, others-9*

item 6: **social group** : *scheduled tribe-1, scheduled caste-2, other backward class-3, others-9*

item 17: **primary source of energy for cooking** : *coke, coal-01, firewood and chips-02, LPG-03, gobar gas-04, dung cake-05, charcoal-06, kerosene-07, electricity-08, others-09, no cooking arrangement-10*

item 18: **primary source of energy for lighting** : *kerosene-1, other oil -2, gas-3, candle-4, electricity-5, others-9, no lighting arrangement-6*

item 21: **ration card type**: *Antodaya -1, BPL – 2, others - 3*

**Note:** 1 acre = 0.4047 hectare
