## FOREWORD

A number of steps have been taken by the Central and State Governments since Independence for the elimination of exploitation of the tribes living in the country. Efforts have also been made to raise the economic condition of the primitive people of the State during this period but for want of integrated area development approach for their emancipation and over all economic improvement, the desired results have not been obtained so far. Therefore, the immediate and pressing need for the accelerated development of area involved can hardly be over emphasised.

The Integrated Area Development Project of Khatima Block, District Nainital, is one of the pioneering steps in the micro-level planning in the Tribal Areas of Uttar Pradesh. This plan has been formulated at the instance of the State Government with the objective of eliminating the exploitation of and bringing these tribals in the main stream of society, which can be obtained by linking the developmental activities with the local resources, needs and aspirations of the tribals and potentialities of development.

Area Planning has been recognised as an indispensable technique for comprehensive development of an area based on integration of functional and spatial factors. This technique aims at selective decentralised concentration of socio-economic activities at the identified central places and ensuring linkages in the programmes under implementation to derive an optimum benefit for the inhabitants of the study Area.

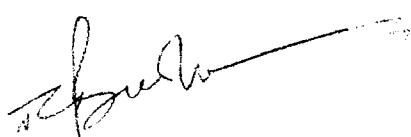

-:2:-

In the present study, detailed villagewise basic and space preference data were collected both from primary and secondary sources and this has helped in planning for this area on the pattern of an integrated area development and it is hoped that the plan when implemented will go a long way in ameliorating the social and economic conditions of the Tharus living in the study Area. Time constraint, however, did not permit the research team to use more sophisticated methods in preparing this plan.

Sri C.L. Bajpai, Senior Research Officer, and other Research Assistants of the Area Planning Division who have worked hard in completion of this study deserve commendation for this work. We are also grateful to the Director, Social & Harijan Welfare, U.P. and the Block Development Officer, Khatima who assisted the Research Team in its field work. We also take this opportunity to place on record our thanks to Sri G.K. Arora, the then Commissioner, Kumaun Division and Sri N.S. Chopra, the then District Magistrate, Nainital for taking a keen interest in the study.

Lastly, we are also grateful to Sri Amir Hasan, Managing Director, Tarei Anusuchit Janjati Vikas Nigam Ltd. and Km. Sarla Sahani, Joint Secretary, Hill Development Department, for their continuous cooperation with us to complete the study.

Sept. 16, 1980.

## Chapter 1.

### INTRODUCTION

1.1 The crux of the problem of tribal development is to bring these communities in the mainstream of national life. The efforts made in this direction so far have not been able to achieve the desired results. A critical evaluation of the ongoing programmes was made at the time of formulation of the Fifth Five Year Plan and reasons for their failure were also examined. In this context, it was found that the major programmes for the development of tribal areas up to the Fourth Plan consisted of educational schemes, co-operation, research, etc., which were meant to supplement the programmes within the respective overall sectors and no separate sectorwise allocations were made in the welfare of tribal people. The past experience, however, shows that such provisions were not adequate to provide a reasonable base for their development. It was, therefore, felt that a supplementary sector for the welfare of tribal people could play an effective role in bridging the gap between these groups and the rest of the society. Even in the case of area-based programmes, such as tribal development blocks, the impact has not been appreciable on account of rigid adherence to the schematic pattern in the implementation of programmes and adoption of the same institutional framework, which was developed for advanced areas without taking a note of the special requirements of these communities. The inadequate development of credit and marketing, agriculture and communications has been mainly responsible for their slow economic and social progress. It is, therefore, clear that so far a fragmentary approach was adopted in respect of development of tribal areas through normal plan programmes. In these programmes, the major emphasis has been on physical inputs and human resources have also been treated as one of the numerous inputs necessary for the development of an area.

1.2 A special emphasis was given on tribal development in Fifth Five Year Plan, which aimed at improving the quality of life and narrowing down the gap between the levels of development of tribal people and society in general. The Fifth Plan had also specified the need for developing a new strategy for tribal welfare which could aim at developing confidence in the tribal society towards various welfare measures in order to bring them into the mainstream of national life. Another important element of the strategy was to create a social order which would be free from all types of exploitation.

1.3 The Fifth Plan laid a great stress on evolving special approaches and plans which could meet the requirements of different tribes living under varied conditions and delineating some basic planning units and the potential centres where adequate investment could be made to generate growth. Thus, a new strategy with special emphasis on spatial integration has been evolved for development of tribal communities. Apart from this approach, which would ensure accelerated development of tribal areas, the Fifth Plan had also adopted a policy of sustained efforts for greater intergroup interactions, greater understanding of human types and smoother approach to bring the tribal communities into the very composite life of modern society.

1.4 "The strategy of integrated tribal development planning adapted in the Fifth Plan, aims at (i) integrating the tribal population in the socio-economic stream of the rest of the country, (ii) elimination of exploitation of tribals in all forms, (iii) speeding up the process of social and economic development and (iv) developing self-confidence among the tribals by improving their organizational capacities"

1.5 Keeping in view the above broad strategies it was envisaged to develop a specific plan with emphasis on the creation of an unified and flexible mechanism for planning

and implementation for each area considering its problems, felt-needs and sociocultural peculiarities.

1.6 Although Uttar Pradesh does not have a significant population of tribals as compared to other states, but even then the problems of tribal development are complicated as each and every pocket ( which are scattered in the State), has to be developed, keeping in view its special needs. Khatima Block constitutes one of such pockets situated in the Sub-Himalayan Tarai of Uttar Pradesh. This block is inhabited by Tharus whose total population is estimated to be of the order of 39.33 thousand. This pocket of tribal concentration is somewhat different than other tribal areas as it is not isolated from the rest of the region or society. The area itself is not very backward in the matter of productivity and development of other infrastructure and facilities. The tribals here are also not without the means of livelihood as in most of the cases they are the owners of fertile land. In spite of this, the present lot of majority of Tharus is miserable. The main reason for this is the problem of land alienation, which is responsible for exploitation of local tribals at the hands of outsiders who have taken possession of their land by advancing them loans for consumption purposes. Because of their peculiar social structure and outmoded social values and attitudes, the Tharus still suffer from abject poverty. They are caught in a vicious circle of taking loans, transferring their rights in land, though illegally, spending the money on vices and evils, again taking loans and again transferring more land to the outsiders. The problem of land alienation has assumed serious proportions in this area, as it continues unabated in spite of legal ban on transfer of land by a tribal to an outsider. Apart from the problem, the Tharus are living in precarious conditions after losing their control over the land which happens to be the main means of production.

1.7 This area, therefore, presents a peculiar problem for the planner in which a tribal, in spite of being the owner of good fertile land, continues to remain poor, ignorant and isolated from the cultural mainstream of society. This calls for an early and effective solution to these problems in a long-term perspective.

1.8 Micro-level planning can provide a suitable framework for development of such areas. This type of planning is based on integration of functional and spatial factors and also takes into account the planning for social change and inculcation of progressive ideas amongst the people of the area. Micro-level planning involves a multi-disciplinary approach in which a broad spectrum of diverse disciplines, such as economics, geography, social sciences, law and administration, comes into play necessitating a synoptic treatment of human settlements. It can be used for achieving the objective of comprehensive development of an area in which economic growth, inculcation of progressive ideas and values provision of social facilities and spatial development are synchronised and synthesized. Thus, the broad objective of this study is to develop a methodology for formulation of an integrated area development plan for tribal areas of Khátima. The specific objectives of this study are given below:-

- (1) To make a diagnostic study of the economic and social structure of the community with a view to identifying central problems of the area;
- (2) To make an analytical study of the existing level of resource development with a view to finding out the constraints to, and potentialities of development;
- (3) To make an in-depth study of the spatial structure of the area for finding out its deficiencies and gaps;
- (4) To suggest suitable measures for problems and evolve a suitable strategy for development of the area;

- (5) To suggest suitable programmes of economic and social development which would directly benefit the tribals in this area;
- (6) To suggest a programme of social action which could help in bringing about attitudinal changes in the tribal community;
- (7) To suggest a settlement pattern, which would serve the area and population effectively;
- (8) To study the problems of implementation and identify gaps therein and suggest suitable measures for effective implementation of tribal development programmes; and
- (9) To synchronise and synthesise the above findings in a planframe which could be implemented in this area for its integrated development.

It is generally conceived that the tribals do not show the ways and means of life as the persons of other rural areas follow. The tribals neither entirely live on the produce of forest nor they drag their life only by hunting and wearing the skins of wild animals. One can see them wearing cotton clothes following agriculture and other allied activities. Politically, they are so conscious that a 'Rana and Tharu Praishad' is motivating them to keep a pace of development with the non-tribals. Even then, it needs a great attention to save them from the social and economic backwardness. In addition to the external exploitation, the ecological limitations and inadequate implementation of developmental programmes, have put hindrance in their progress.

1.10 The tribal sub-plan should not be bounded with precedent or norms determined by the Government or researchers. It would be desirable to go through a detailed study of the specific area. As already indicated, study area is not similar to other tribal areas. Although the total economy of the area revolves round the key point which is Agriculture, even then they possess their own characteristics of industrial skills and their own self-sufficient way of life. It is said that

"the tribals of U.P. are a colourful people who, in spite of the economic backwardness, sing and dance and try to enjoy life. The tribal way of life represents one of the facets of the unique characteristics of Indian Culture-Unity in Diversity."

1.11 The above discussion and challenges put forth can be met by preparing an Integrated Tribal Development Programme for the said area. The problems of the area are, more or less, the same as of other non-tribal blocks of this district. Techniques of growth centre strategy have been adopted to prepare a micro-level plan from the grass root level. This technique will satisfy the felt needs and socio-cultural problems of this area by delineating the zones of influence of the central places and its further sub-division to meet the acute problems inherent among the local people and accelerate and penetrate the effects of proposed developmental programmes to the village, hamlet and family levels and, finally, to the level of individuals. In this way, the project will not only remove the economic and infrastructural gaps in this area, but awaken the people to have the full participation in the mainstream of Indian life.

1.12 With the exception of Basti and Pilibhit districts, the Tharus are also found in the northern portions of the Tarai districts. The Tarai tract, about three decades ago, was heavily infested with Malaria and the tribal people, that is, the Tharus were almost the only people who could withstand the deadly climate of the area and reside there. Now that the Tarai area has been reclaimed and is free of Malaria and better communication facilities have been built, many displaced persons from the Punjab, Ex-service men and political sufferers have started exploiting the land. From

a survey conducted in 1968, the tribal population in the Tarai districts is as noted below:-

Name of Tribe	Division	District	Blocks	Population of Scheduled Tribes (in 1968)
1	2	3	4	5
Tharus	Faizabad	Gonda	1. Pach Perwa 2. Gaisadi	9133 1513
	Bahraich		1. Mahin Purwa 2. Sisrsia	2127 1452
	Gorakhpur	Gorakhpur	1. Pharenda 2. Nau Tanwa	31 1150
Kumaon		Naini Tal	1. Khatima	39329
Lucknow		Lakhimpur	1.Nighasan 2.Pallia 3.Banchhetra	1170 216 10190
			TOTAL	66311

There are about 18 tribal communities in the State but only Five of them viz. Tharus, Buxas, Bhotias, Rajis and Jaunsaries have been constitutional recognition as scheduled tribes. The total population of tharus and Buxas together is 85,725. About 59 per cent of the total tharus live in Khatima block of Nainital district.

\* However, this project report of Integrated Tribal Development relates only to tharus of Khatima block.

## Chapter 2.

### AREA AND THE PEOPLE - AN OVER VIEW

#### Some Characteristics of the District

2.1 The district of Naini Tal occupies the southern and South - eastern portion of the Kumaon division. It is of triangular shape bounded on the north by Almora district and a portion of Nepal on the east, on the west by Garhwal and Bijnor districts and on the south by the Pilibhit, Bareilly and Moradabad districts. The total area of the district is 6824 Square Kilometres. It lies between the parallels of  $28^{\circ}51'$  and  $29^{\circ}37'$  of North latitudes and between  $78^{\circ}43'$  and  $80^{\circ}30'$  of East longitude.

2.2 "The district is of a most heterogeneous description, the northern portion consists of hills, the outer ranges of the Himalays, which in many places, rise up steep from the gentle slopes at their feet, while elsewhere there are several series of low forest-clad hills which form as it were the out works of the main range of mountains. From the hills, we pass with rapid transitions through the curious phenomenon of the Tarai and Bhabar to the ordinary alluvial plain that characterises the north of Hindustan. The mountains of the outer Himalayas in this district have a general elevation of about 6,500 feet above the level of sea, while the highest summits attain to a height of over 8000 feet. The chief mountain range of the district is the Gager which forms the southern brow of the Himalayan system."

2.3 None of the rivers in this district has its origin in the snowy heights of the upper Himalaya. On the east, there is the Sharda river and on the west flows the river Ram Ganga mainly in Bijnor district. The river Koshi rises on the north of the district in the

---

\* Mainly based on District Gazetteer : Nainital

hill-county of Almora. The district is a famous hill resort of Uttar Pradesh, with a lake surrounded by hills and a temple of Naina Devi on the embankment of the lake. There are two peak seasons which are observed as Puja and Spring Festivals. On both the occasions, a panoramic spectre catches one's heart when colourful yachts glide over the blue waters of the lake. This township had been the summer capital of Uttar Pradesh. A Camp Civil Secretariat for summers was constructed during the British regime. A meteorological observatory is situated in the outskirts of Naini Tal township. The sunset is also very famous here for the tourists' attraction. In clear sunny days, the snow-clad Himalayan hills can be seen by the naked eyes.

2.4 The details of original settlers of this district are not known and they themselves trace their origin from Pandavas of Mahabharat period.

2.5 Apart from the Naini Tal Lake, there are still a number of lakes in the district, viz. Bhimtal, Malwa Tal, Sat Tal, Navkuchiya Tal and Khurpa Tal. Besides these, there are many other small lakes such as Sukha Tal, Sariya Tal, Khuriya Tal and so on.

#### 1. Climate and Rainfall

2.6 In view of topographical reasons, the climate of the district differs from its one region to the other. In the hill area, the temperature usually does not exceed  $30^{\circ}\text{C}$  even in hot months. While during the coldest period of the winter season, the temperature is around  $0^{\circ}\text{C}$ . Normally there is heavy rainfall on the hilly slopes and the average annual rainfall in the hill areas comes to around 25 cms. The hilly tract also receives considerable rainfall during the winter season. There is snowfall in many parts of the hills but it is seldom of long duration.

2.7 Babher is hot in summer and cool in winter. The annual rain fall of this region ranges between 152 to 229 cms.

2.8 "The climate of the tarai belt is best described by G.A. - Roberts. The climate all the times of the year is trying. Owing to the proximity of the hills, the circulation of air being very much retarded, the direct and refracted heat makes it hot and sultry. In the months of August and October when the forest under-growth grows up, the climate is extremely malarial (Malaria has been eradicated after Independence). During other portions of the year, the climate though enervating, is not so unhealthy."

2.9 The annual rainfall in Tarai region varies from 137 to 163 cm. It is much heavier in the eastern Tarai than in the western portion. This holds good for the Bhabar also.

## 2. Soil

2.10 The Hill soil which has only a thin covering of alluvial soil, is classified into three categories. Irrigated land is called 'Talaon.' The upland (dry land) without artificial irrigation is known as 'Paraon.' The areas having semi or imperfect irrigation are called Pauchar..

2.11 The Bhabar has comparatively new alluvial deposits over the inner surface consisting of rocks, boulders and gravel.

2.12 The Tarai soil resembles that of the Rohilkhand plains. In the upper portion, the soil is light sandy loam. However, as we go southward, we come across more of alum and less of silica and later stiff clay occurring in depressions. While the soil of Eastern Tarai is light and friable, that of West is fairly dark.

---

## 1. Hasan, Amir, The Buxas of the Tarai.

### 1.3 Flora & Fauna

2.13 Both hilly and plain tracts of the district have large areas under the forests. In 1961, the total forest area of the District was 3.46 lakh hectares, which rose to nearly 3.93 lakh hectares in the year 1969-70.

2.14 In the hilly portion forests of sain ( terminate tementosa), haldu (adina cordifolia), Chir (Pinus longifolio). Deodar (Cedrus deodar) oak etc. are found while in the plain's of Bhabar and Tarai, forests of sal, shisham, Khair, Babul & Bamboos are more frequent.

2.15 A large variety of animals is found in the forests of the district. According to the district Gazetteer, the important wild animals found in the district in greater or lesser number, are tigers, elephants, chitals, Nilgai Antelopes, wild dogs and monkeys in the Tarai & Bhabar areas and Himalayan bears, Wolves and gura in the sub-mountainous and higher reaches of the Himalayas.

### 2. Project Area

2.16 The Tarai Portion falls towards the south of the Bhabar which extends southwards to the cultivated plains of Ruhelkhand. It stretches from the Sharda on the east to Kashipur on the west and lies between  $28^{\circ}33'$  and  $29^{\circ}20'$  north latitude and between  $78^{\circ}53'$  and  $80^{\circ}$  east longitude with an average breadth of 11 miles from North to South. Its general appearance is that of a plain sloping gently towards the South-East. The area, in general, is attract of forests and swamps with scattered patches of cultivation. The soil of Tarai is every where a moist alluvial deposit without any sign of rock formation of the Bhabar !

2.17 Khatima block is spread under the foot hills of Kumaon ranges interspersed with many small hill rivers passing through thick and thin jungles. Since river Sharda passes besides the block and forms an international boundary with Nepal, defence and strategic importance can not be overlooked. There is a big cantonment around Banbasa. Because of huge water discharge from river Sharda, a great irrigation potential was harnessed as back as 1928 and Banbasa headworks came into being then. A number of Sharda canal tributaries were constructed and the whole system irrigates quite a sizable areas of agricultural lands stretching upto central and eastern parts of the State. The Sharda Sagar Reservoir located at a distance of about 20 Km. from Khatima offers a very great potential for the development of pisciculture. At present, it may be however noted that bulk of profit goes to contractors who supply fish to many long distance places. The railway station of Puranpur is the main loading centre for fish.

2.18 Other rivulets coming down from the hills were also supplying tremendous amount of water and more so were responsible for sudden flood in Pilibhit, Hardoi and nearby districts. So, to control these floods and make optimum use of flood water for irrigation purposes, a dam named 'Nanak Sagar' was constructed. This dam is situated at a distance of 8 Km. from Khatima. The total area of the dam is about 70 Sq. Km. This dam feeds water to Dooni Dam in district Pilibhit and a number of canals originate from this Dooni Dam. The surplus water is released in Deoha river which is a tributary to river Gomti. Very near to Nanak Sagar, there is a great Sikh pilgrimage place, known as-Nanak Mata, which is capable of developing many economic and social activities. Adjacent to Nanak Mata is Sitar Ganj which is a good market centre and many multi-storeyed building have come up recently. The market of Sitar Ganj provides a scene of humming economic activities along with deafening sounds of trucks. About 4 Km. away

from Sitar Ganj, a Model Jail named after the late Chief Minister, Sri Sampurna Nand Ji, is situated towards its North. The convicts work on the open Jail farms and bring the vegetables, etc. to Sitar Ganj market for disposal. Thus, it can be seen that Khatima Block is full of life. It is progressing in its own way and what is required is just to channelise the pace of development in such a way that wastages are kept to the lowest minimum and the benefits of development must justifiably reach the tribal people and other inhabitants living below the poverty line.

#### The Tharus

2.19 At present, the Tharus are divided into a number of endogamous sects. They are the Ranas, the Dengurias and the Kathuriyas. While the Tharus of the Naini Tal District and majority of the Lakhimpur district are Ranas, the Dengurias are the dominant group of Bhabar areas of Gonda and Bahraich districts. The Kathuriyas are found in small numbers in Lakhimpur, Bahraich and Gonda district. In Gorakhpur district, most of the Tharus, however, come from the Kathuriya stock.

2.21 The Tharus have a strong traditional Panchayat organisation to settle their disputes and to ensure adherence to their common code of conduct. The Tharus are meat-eaters and are fond of liquor. Even women and children are addicted to drinking.

#### Customs and Rituals

2.21 The tribal society also functions under an organization and no jungle law prevails in them. Their society is also closely interwoven with social institution flowered and fragranced with rituals, melody usly sounded with folk-lores like main stream of society. Family marriages and many other rituals, including the last rites are the established institution. Some more

2.22 A primitive Tharu family of Khatima Block, represents a joint family system. The women are usually the dominating members of the family and the eldest female member invariably happens to be the head of the household. She manages all the economic and social affairs of the family. The break in the joint family is rare, except a few recent exceptions. The children, male or female go for education, if a school is available nearby.

2.23 Special ceremonies are not performed after conception or before the birth of a child. The elder and well known female acquainted with the system of child deliveries, acts as a midwife. The umbilical cord is buried under ground and for six days the ritual impurity is observed. On the sixth day, the mother and child are given the ceremonial bath as a part of purification ceremony and Chhathi is observed on this day, and the room is cleaned and male members can see the off spring on this day. A small feast is also held on this occasion. During confinement period, fire is kept burning outside the delivery room. The name ceremony of the child is usually done on the sixth day, when household blesses the newly born and allot him a suitable name.

2.24 The very basic and fundamental institution of the society is marriage and the same is true for the Tharus. As a custom, marriages are settled and engagement ceremony takes place at a rather very young age of the daughters. Sometimes, impact is also made by the pregnant women to settle the marriage of their off-springs, if they give birth to babies of opposite sexes. Usually, marriages are negotiated by Phopha (husband of father's sister), or Mama (brother of the mother). Sometimes, a marriage is settled by exchange of girls. Often, price is paid for the bride in terms of certain quantity of cereals, oil, pulse and liquor.

2.25        The sexual behaviour of these tribals is also very typical. In case of death of a married brother, the widow can remarry with either younger or elder brother. Widows remarriage outside the family is also permissible and is known as Sagai. A divorce is also permissible on the grounds of impotency of the husband and adultery on the part of the women.

2.26        The last rites are not very different from Hindus so far as the Tharus are concerned. The dead body is burnt and the ashes are immersed in the nearby river. A small feast is given usually on the third day of the death and the purification ceremony takes place on ninth or tenth day of the death respectively for males and females. The final purification ceremony takes place on the 13th. day when a big feast is thrown to the entire village folks. In this feast, meat, chicken and wine are freely used.

2.27        Sometimes, the dead body is buried and some money is also placed with the dead body; may be for the satisfaction of the soul. On the night of Diwali, the tribe-men generally take the favourite edibles of the deceased and place it on the tomb with the belief that the soul would be satisfied.

2.28        The religious ceremonies are performed by the priests coming either from hills or plains. These tribesmen do not have a priest of their own. In case of illness or disease, the tribes men have a superstitious belief regarding the role played by the evil spirits. To ward off the evil influence, they engage 'BHARARA' for the treatment of the sick, but now there is gradual awakening in the tribal people and they are adopting modern medical treatment. Cases of superstitions are diminishing with the gradual increase in literacy and education.

2.29        The Tharus of Khatima block usually wear Dhoti, coat and turban. The women wear Ghaghra, Choli and Chunri. Usually, these are of cotton and gaudy colours. Coins of different denominations are used as

buttons. Women usually wear silver bracelets, anklets, nose rings and necklaces.

2.30 The food habits of these people are not very dissimilar with other people of northern India. These people every day take rice and Chakhna ( a vegetable specially prepared with high quality of chillies, salt and masala). The Tharus accumulate cauliflower, turnip, radish and fish and dehydrate them in the sun. So dried articles are used in off-seasons. Liquor is essential part in their diet. They manufacture it locally and it is made of rice. The rice is fermented and then brewed and the produce is called 'Jaund'.

#### Problems

2.31 The main problem faced by the Tharus is the transfer and alienation of land manoeuvred by the Sikh settlers. In the past, when this area was inaccessible and unhealthy because of marshy, muddy and malarious climate, outsiders were not coming with a view of settling down here. It is reported that at that time, the original inhabitants were Tharus and virtually they were masters of the inhabitable tract and with stood the arduous problems successfully. With an end to malarious climate of tract by clearing scrub jungles and grasses, a large number of Tharu villages are now found situated in a wide open plain. The elderly Tharu informants report that the Kumaonies also entered this area and they shared the fortunes of the local people by exploiting land and forest resources. After partition of the Country and with the immigration of the outsiders, mostly displaced persons, a radical change was brought about in the overall habitat of the Tarai region. In the past, there was no dearth of land and any family was at liberty to cultivate as much land as was required by it, depending upon the available manpower with the family. It is also important to mention here that the entire area

used to belong either to the Government Estate or was categorised as Kham land. The cultivators had no right to transfer their property. The abundance of land and possibility of reclamation of land never posed any problem relating to transfer or alienation of land. After rehabilitation of displaced persons in this area, the process of transfer or alienation of land began. A few local leaders of the Tharu community informed that even after rehabilitation of displaced persons and allotment of land to them, these did not evoke any great problems. However, in due course of time when the outsiders showed better results of crop yield, a better returns from the land, other people also started coming and settling down in the area. At this stage, the new comers started thinking in terms of agriculture as a lucrative means of subsistence and since the land for fresh allotment was not available, they started grabbing the land of innocent and simple tribals in number of ways.

2.32 It is reported by the local people that the method of grabbing land was first to develop personal relationship between the intending procurer and the tribal owner of the land. It is also said that in this process, some people from among the tribals generally acted as a sort of agents of the intending purchasers and they used to contact the tribal people and manipulated in such a fashion that the tribal owner of the land become the victim either by taking loan in cash or kind of simply parting with his own land for accommodating the outsider family for cultivation of the land. The agent is locally called 'Diebar' who is supposed to have full facts about the landholdings and the needs of the tribal families. The other methods which are adopted for taking away tribal land are as follows:

(1) The head of the tribal-family sometimes asks for money in shape of loan from a Punjabi moneylender and the money is advanced without any security. Quite often the borrower fails to repay the loan and after a number of years, the moneylender would ask for the money with compound interest and the borrower finds himself helpless to repay loan, prefers to transfer his agricultural land. In this context, it is also reported that many a times the actual money borrowed is enhanced by number of times; for example, if a sum of Rs. 100/- is borrowed, then one zero is added making the amount to Rs. 1000/-. In this way, the money becomes unpayable by the tribal and he is ultimately deprived of his land.

(2) Sometimes, the newcomer develops good relationship with the tribal-family and the tribal family seeing the need of the incoming family, parts with a portion of his agricultural land on compassionate grounds, but the simple tribals never get back their land afterwards.

(3) The Tharus who are addicted to alcoholic drinks, visit neighbouring markets and there, the intending Punjabi land grabbers offer them bottles of liquor and this process goes on for some time when both the Punjabi and concerned tribal become quite close. The Punjabi would ask for surplus piece of land with an assurance that the tribal would get a part of the yield. Then the tribal lacking the foresight and seeing the immediate gains of getting cereals without putting any labour, agrees to part with his piece of land. In this phenomenon of bargaining on liquor, it is reported that sometimes the Punjabi gets the signature/thumb impression of the tribal on a document during intoxication, on which the transfer of land is written afterwards.

(4) Many a times, it also happens that the plot of the agricultural land falls in between the plots of

the agricultural land falls in between the plots of Punjabi/other high caste Hindus and the tribal is not allowed to carry on his agricultural activities on his own plot because he is prevented by the owners of the surrounding plots to carry their animal and pursue other agricultural operations. The tribal finds himself in a weak position, prefers to sell this land to a Punjabi on a nominal price.

(5) Forcible possessions of tribal land are also becoming quite frequent in the area. When a tribal does not yield to the wishes of the intending Punjabi land grabber, he is threatened and sometimes beaten also. Consequently, the tribal transfers his land under compulsion and fear and sometimes even abandons the village and migrates to other places, preferably in Nepal, where his relations are found.

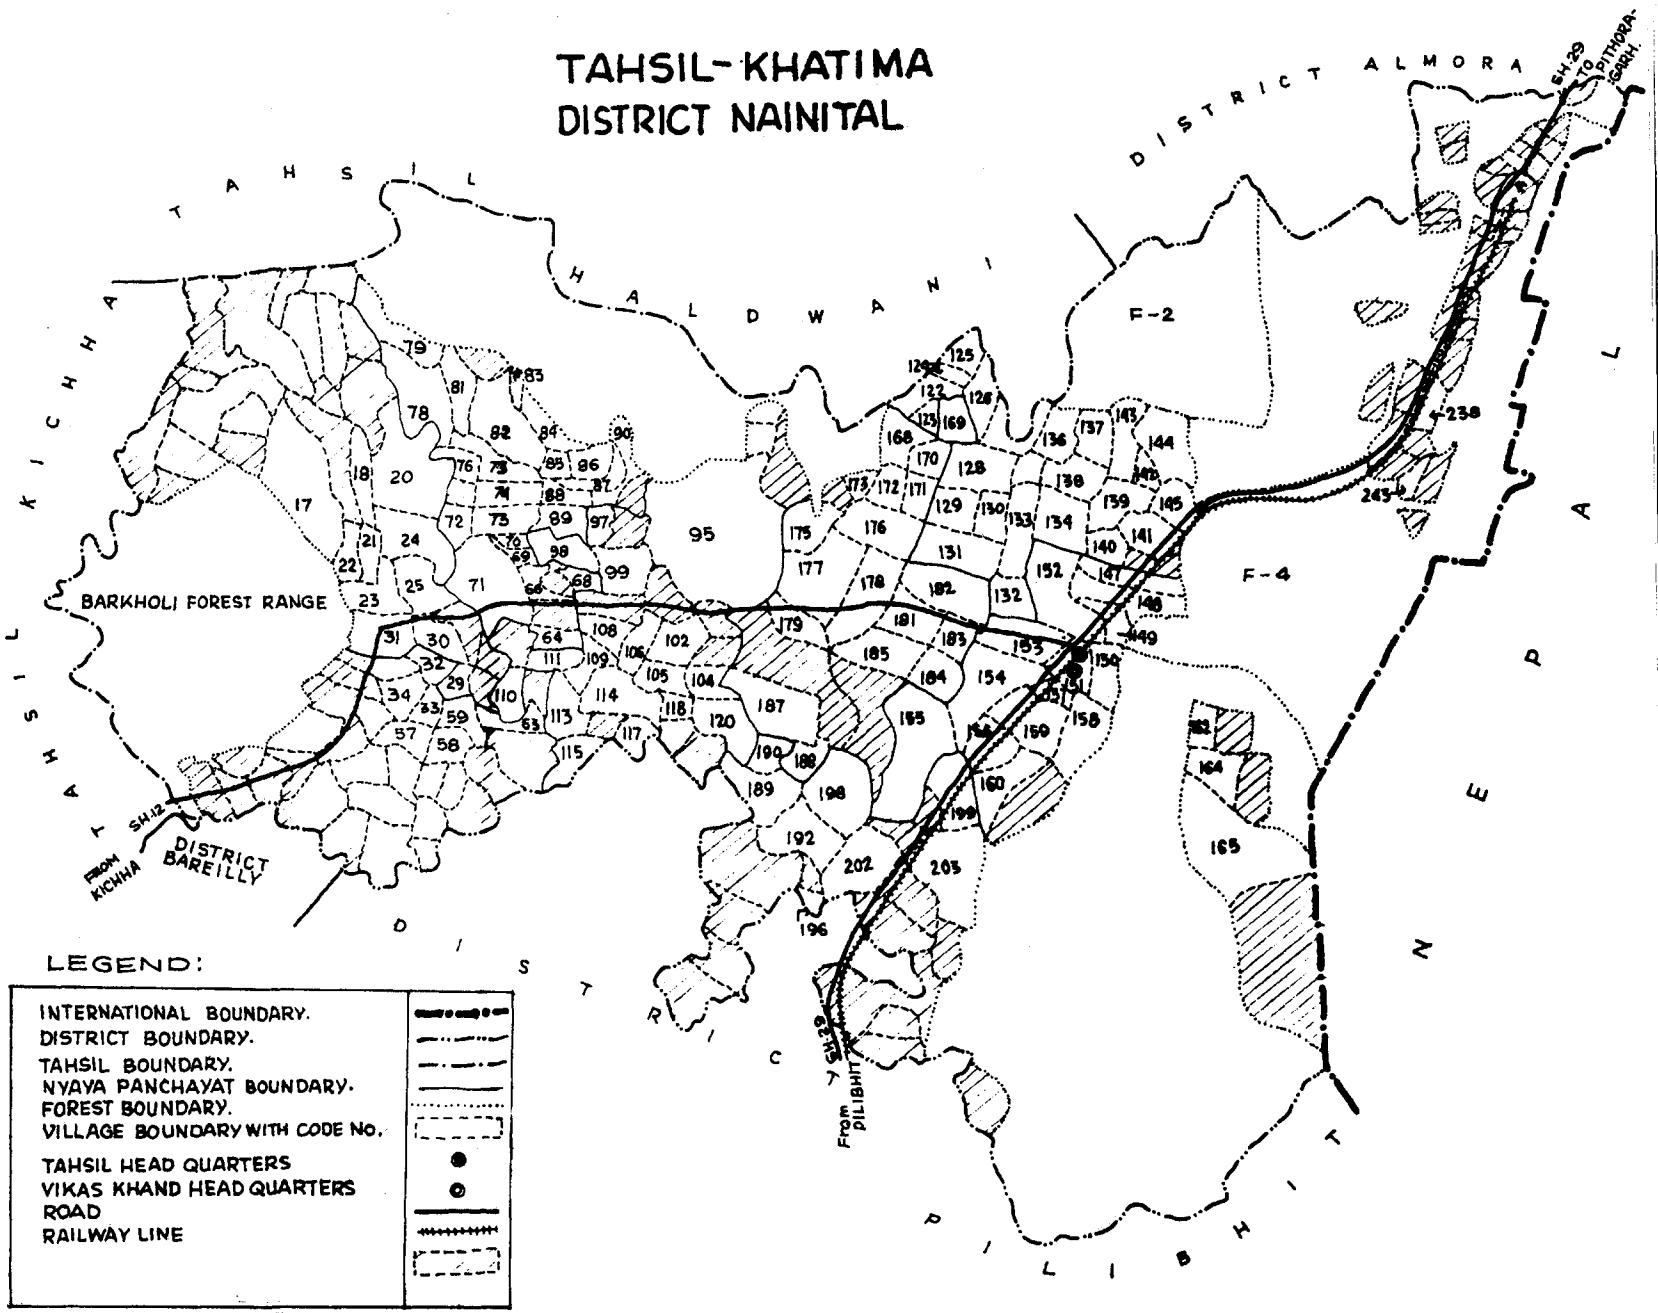

(6) It is reported by the tribal people that in the past when the Punjabis were not settled in the area, they used to borrow money from Banjaras who were coming from Neuria and Dhakanipur in Pilibhit District. But, they used to take grain from the mortgaged land. The Punjabi manoeuvred in such a fashion that they advanced money to the respective Banjaras and obtained land through them.

PRESENT ECONOMIC STATUS OF THE PROJECT AREA.

The Integrated Tribal Area Development Project is being proposed for Khatima Block of district Nainital. This block is a part of the Terai belt of the district. An area of 1,180 hectares is under forests. The northern boundary of the Project area forms a portion of Kumaun foot hills. The southern boundary of Khatima block touches the district of Pilibhit and the eastern Boundary forms the international border with the Nepal. On the west of the Project area is Sitarganj. The area is interspersed with a number of rivers. During the monsoon season, the discharge of water of these rivers considerably goes up, which for sometime past, inundated a large area under water. Widespread damage was a normal feature when these rivers got flooded. With a view to preventing floods and utilizing the water for irrigation purposes, a number of dams have been constructed. The names of these dams are Nanak Sagar, Sharda Sagar and Banbasa Head Works. The Lohiya Head power-generation Complex is situated at a distance of about 3 km. from Khatima.

3.1. The tribal people of India have been considered as the original dwellers of the sub-continent with their own culture and ceremonies. The events, they faced over a period of time, have forced them to inculcate a feeling of seclusion. It is because of their feeling to conserve and fortify their original culture and folk-lores coupled with certain other factors like inaccessibility, lack of medical and other facilities, etc., have forced them to retain primitivism and hence backwardness. In majority of the cases, the tribal groups are living a life of deprivation and poverty and are characterized by ignorance and lack of education. There is an air of primitivism around their manner of dress, food, housing,

TAHSIL-KHATIMA  
DISTRICT NAINITAL

singing, dancing and folk-lores. Their health conditions are also poor. There are two main reasons for this; firstly, the food they take is badly lacking in proper nutrition and, secondly, medical facilities are almost insignificant, as they live in inaccessible places. Consequently, certain diseases like tuberculosis, venereal diseases, leprosy and malaria have assumed somewhat epidemic proportions in the tribal areas.

3.2 The prevalent problems of the tribals have to be solved in a manner so that their culture is preserved and yet integrated in the main stream of the society. This can be done by having a respect for the tribal culture rather than by eliminating the tribal culture. The tribals have their own capacity to enjoy life. Their honesty and sincerity are much above that of the non-tribals and the moral values and self-reliance are worthy of emulation by the new settlers.

3.3 The Khatima block has been a stage of melodrama of new Sikh settlers who have captured large patches of land and have been encroaching upon the life and culture of the tribal population. The dominant and warrior characteristics of these Sikh settlers have been constantly pushing back the simple and meek aborigines. These Sikh settlers have installed a shrine and have developed a pilgrimage centre called Nanak Mata.

3.4 The community development block of Khatima has been in operation since the year 1953 but very little benefits could reach the tribal population. A larger share has been snatched away by the new settlers. Considering these factors and the probable danger to the socio-cultural life of the tribal and their economic upliftment, a special tribal welfare project was launched in the year 1969 by the extension wing of the then Planning Research and Action Institute, which was later followed by a special

project run by the Harijan and Samaj Kalyan Department. Now the techniques of development adopted by the Rural Development Department are being substituted by the Integrated Area Development techniques. A number of special area programmes are now in operation in different parts of the State. A need was also felt at the Government level to adopt spatial planning technique for speedier and assured growth of the area.

The Decennial growth rate of population during the period from 1961 to 1971 was 47.6 percent which is too high in comparison to 22.7 per cent for the State. This enormous increase in population proves that the land man ratio has increased sizably. The pressure on land has increased because the population could not find way to other productive sectors. The density of population of this area is 177 persons per sq.km. of area. Considering the state average of 300 persons per sq.km. the area is not densely populated.

#### Population

3.5 Since the Tharus have been declared as Scheduled Tribes only in June 1967, their population in 1951 and in 1961 Census was not recorded separately. According to 1971 Census, the total population of the Khatima block was 1,27,703 out of which, about 39,329 (31 per cent) was the population of Scheduled Tribes. Village-wise details of population are given in the Village Directory. The decennial growth rate of population during the period from 1961 to 1971 was 47.6 per cent. The density of population comes about 177 persons per sq.km. Thus, the project area is not densely populated but its pressure on Agriculture has increased during the decade because of an unprecedented growth rate of population and the slow growth in industrial sector. The number of females per thousand males in 1971 was 903. The

literacy per centage comes to about 22.37 in Khatima block according to 1971 Census. The per centage of workers employed in various occupations comes to 32.44. The population statistics of Khatima block is shown in the following table:

Table 1.  
Population Characteristics

Sl. No.	Items	Number/per centage
1	2	3
1.	Population (Total )	: 1,27,703
2.	Decennial growth rate of population(1961-71)	: 47.6
3.	Density of population ( per sq. km.)	: 177
4.	Sex ratio	: 903
5.	Literacy percentage	
	(i) Males	: 18.14
	(ii) Females	: 4.23
	(iii) Combined	: 22.37
6.	Per centage of total workers to total population	: 32.44

Source : 1971 Census.

Note: Figures against Item No. 4 to 6 have been worked out for Khatima tribal villages only excluding forest villages.

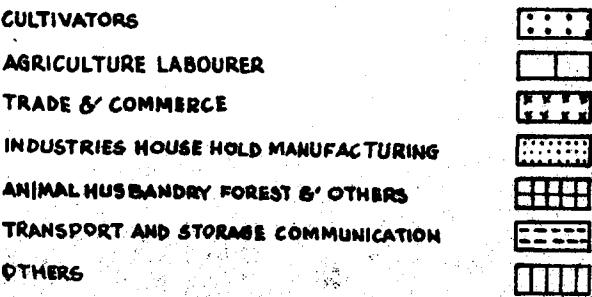

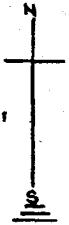

Distribution of Workers

3.6 According to 1971 Census, the total number of workers employed in whole of the Project area is 12,732 which comes to about 32.44 per cent of the total population. Among these employed persons, about 76.0 per cent workers are engaged in agriculture only. The number of agricultural labourers is 1,864 which is about 14.64 per cent of the total workers. The workers engaged in industries and household manufacturing are very negligible, i.e., 104 or about 0.82 per cent. The percentage of workers employed in primary, secondary and tertiary sectors are approximately 78, 4 and 18 respectively. The position of workers engaged in different occupations is shown in the following table:

Table 2.  
Distribution of Workers

Workers category	No. of Workers engaged	Percentage of total workers
1	2	3
1. Cultivators . . . . .	7,762 . . . . .	60.96 . . . . .
2. Agricultural Labourers	1,864	14.64
3. Animal Husbandry, Forests and others	350	2.75

BLOCK - KHATIMA  
DISTT. NAINITAL

Land Holdings

3.7 The analysis of the data regarding land holdings of 135 tribal villages of Khatima block confirms a viewpoint that only 24 per cent cultivators possess less than 1 hectare of land holdings. Contrary to this, about 12 per cent of the cultivators have such holdings where the area is to the tune of 5 hectares and above. Consequently, about 64 per cent of the cultivators possess a land holding between 1 and 5 hectares, average being 3.02 hectares per family. The details of size of operational holdings are given in the following table.

Table 3.  
Size of Operational Holdings

Sl. No.	Size of holding	Number	Area	Percentage to total holding		Average holding
				Number	Area	
1	2	3	4	5	6	7
1.	Below 1 ha.	2,698	2,159	24.08	6.39	0.80
2.	1ha. to 3ha.	3,557	8,455	31.74	25.00	2.38

Land Utilization.

3.8 Because of its typical topographical physiography of the district, the reporting area is generally not changing as reported by the Surveyor General of India. The total geographical area of the Khatima block is 43,042 hectares. Of the total area, 2.74 per cent is covered under forests, meaning thereby that the area is free of hills in uneven topography which is evident from

:-26:-

the figures of 78.00 per cent (or 33,566 hectares) which is under plough. The land put to non-agricultural uses is about 11 per cent of the total area, may be because of the reason that three major irrigation projects, namely, Nanak Sagar, Bambasa and Sharde Sagar are located here. The canal system has also occupied a considerable area. The land utilization statistics reveal that there is not much scope of bringing new ~~area~~ under cultivation. The intensity of cropping of the area is about 175 per cent against the State average of 133. This may indicate that the practice of double cropping is fairly common in this area. The existing land use pattern is given in the following table:

Table 4.  
Land Utilization during 1977-78.

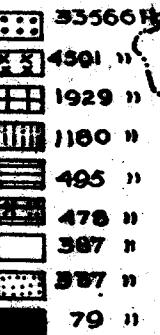

Items	Area ( In ha.)	Per centage
1. Total geographical area	43,042	100.00
2. Forests	1,180	2.74
3. Barren and unculturable land	1,929	4.48
4. Land put to non-agricultural uses.	4,591	10.56
5. Pastures and grazing land	79	0.18
6. Culturable waste	478	1.11
7. Land under tree crops and groves	495	1.15
8. Fallow land	724	1.68
9. Net area sown	33,566	78.00
10. Net area irrigated	10,561	31.46
11. Area sown more than once	25,076	-
12. Intensity of cropping	174.7	-

Area Under Different Crops

3.9 Major crops of the area are paddy, wheat and sugar cane. Sugarcane is the main cash crop because two sugar mills are operating in the vicinity of the block. The average yield figures of the state are available only from the year of 1973-74. Hence, a comparative analysis of the yield data of the block with that of the State is not possible. However, because of good soil texture and many other factors, the average yields of major crops of this block are not higher than the prevailing State yield averages except in case of maize. A potential of potato cultivation is available in the Project area. The details of village-wise area in the year 1977-78 under Kharif, Rabi and Zaid are given in the village directory, appended with the Plan Report.

High Yielding Varieties

3.10 The total area covered under high yielding varieties of paddy, maize and wheat is reported to be about 16,323, 246 and 12,905 hectares respectively which is about 62.67 per cent in paddy, 16.10 per cent in maize and 84.00 per cent in wheat. The area covered under H.Y.V. is shown in the following table and the details of village-wise area under high yielding varieties is given in the village directory.

Table 5.  
Area Under High Yielding Varieties

Crops	Net sown area(ha.)	Area under H.Y.V.(ha.)	Per centage of area under H.Y.V. to total cropped area
1	2	3	4
1. Paddy	26,045	16,323	62.67
2. Maize	1,528	246	16.10
3. Wheat	15,394	12,905	83.83

Source : Block Record.

Commercial Crops

3.11 The management of Sugar Mill of Majholia, adjoining the Project area, organizes a Mela-type festival on 2nd. October every year. The main objective of this Mela is to induce the farmers, specially the tribals to grow sugarcane crop on as much area as possible. In order to boost their production and morale, a number of awards in the form of utility articles like spray machine, cultivator, etc., are being distributed. This creates a competitive spirit among the cultivators to grow more sugarcane as a cash crop. The area under important cash crops like sugar cane and potato are given in the following table and the details of village-wise area under cash crops are given in the village directory:

Table. 6  
Areas under the commercial crops.

Commercial crops	Area (In Hectares)	Percentage to net area sown
1	2	3
1. Sugarcane	3,210	9.56
2. Potato	172	0.51
3. Oilseeds	1,097	3.27
TOTAL	4,479	13.34

Consumption of Fertilizers

3.12 The consumption of fertilizers for the Project Area is given in the following table:

Table 7  
Consumption of Fertilizers in the Project Area.

Sl. No.	Fertilizers	Block	District	State
		(1975-77)	(1975-76)	consumption per hectare (kg.)
1	2	3	4	5
1.	Nitrogenous	44.0	10.03	16.93
2.	Phosphatic	3.3	2.19	2.76
3.	Potassic	3.2	2.42	1.66

Source : Block: Block Development Office.  
District: State Agriculture Bulletin,  
1977.

3.13 The farmers, in general, are following modern methods of cultivation because of the influence of Pant Nagar Agricultural University, which is very near from the Project area. The adoption of progressive practices is very common among the immigrant farmers like Sikhs, Punjabi displaced persons, Political sufferers and Ex-servicemen. These progressive farmers have invariably opted for high yielding varieties of paddy, maize and wheat. At present the consumption of Nitrogenous, Phosphatic and Potassic fertilizers per hectare of gross cropped area is estimated to be 44 kg., 3.2 kg. and 3.3 kg. respectively. Whereas, the corresponding figures

for all the hill districts including plain area of Nainital, are 10.03 kg., 2.19 kg. and 2.42 kg. per hectare.

#### Distribution of Improved Agricultural Implements

3.14 The details regarding the availability of important improved agricultural implements are shown in the following table:

Table 8  
Improved Agricultural Implements

<u>Implements</u>	<u>Nos.</u>
1. Thrashers	323
2. Cultivators	282
3. Hand Hoes	638

As is evident from the table, the adoption of improved agricultural implements seems to be satisfactory. This phenomenon is manifested because of moneyed Sikh settlers who are large farmers on the one hand, and progressive cultivators on the other hand. The adoption of these improved implements among Tharus is mainly responsible because of special Tharu subsidy schemes and diffusion of improved agricultural practices prevalent among the Sikh settlers.

#### Animal Husbandry

3.15 There is a quite large cattle population in the Project area. This provides potential for development of Animal Husbandry, both as an independent sector as well as supporting sector to agriculture. The total livestock population of the Project area is 41,268. The per centage of the milch cattle to the total livestock

is 32.6 per cent out of which, breedable bovine population is 76.4 per cent. The drought animals constitute about 60.18 per cent and the other animals-sheep, goats and pigs-are about 7.25 per cent. The livestock population of the Project area is given in the following table and the details of the village-wise livestock population is available in the Village Directory.

Table 9  
Livestock Population (1972)

Items	Livestock Population	Percentage to total livestock population
1	2	3
<b>A. Milch Cattle</b>

4. Others	155	0.38
Total	2,992	7.25
Total livestock	41,268	100.00
Poultry birds	14,285	-

Source: Block Records.

While planning for Animal Husbandry programme, it is necessary to keep in mind that the Tharus generally do not milk their cows. However, they do milk the shebuffaloes but the breed is very poor and these are mostly dependent on forest grazing. Consequently, the milk yield is very low. Hence, for planning animal husbandry programme, the main thrust should be placed on she-buffaloes; goats breeding and poultry development. As the potential of grazing is available, more programmes for goat-keeping may be taken into consideration.

The number of the poultry birds is more than 14,000 which is indicative that the poultry-keeping is a popular programme. A wider scope of poultry exists in the block.

The existing veterinary facilities available in the Project area include three veterinary hospitals located at Khatima, Sitarganj and Nanak-Mata. These three hospitals are also having the facilities of Artificial Insemination Centres. The Stockman Centres

106

are 10 in number and are located at Jhankat, Beri Anjanian, Bhagchuri, Lumakbara, Sisaura, Bidaura, Nagla, Balkhera, Sripur Bichua. In addition to the above facilities there are 14 Artificial Insemination Centres and sub-centres in the block. For providing a sound base for closely knit veterinary programmes, Scientific Management Approach has to be adopted for providing adequate services to the unserved areas of the tribals.

The number of villages along with their distances from this facility are shown in the following table:

Table 10  
Number of Villages along with their Distances from  
the Stockman Centre

Sl. No.	Number of Villages	Distances from the Stockman Centres (if any)
1.	10	Stockman centre is available
2.	7	1 and 1½ km.
3.	28	2 km.
4.	43	3 km.
5.	19	4 km.
6.	23	5 km. and above
7.	5	N.A.
Total		135

The names of the above villages along with their distances are being given in Annexure B-1.

The number of villages along with their distances of artificial insemination centres/sub-centres are also being shown in the following table:

Table 11  
Number of Villages and their distances from  
A.I. Centre/Sub-Centre

Sr. No.	Number of villages	Distance (Km.)
1	2	3
1.	14	A.I. Centre/Sub Centre is available
2.	13	1 & $1\frac{1}{2}$
3.	29	2 km.
4.	37	3 km.
5.	21	4 km.
6.	16	5 km. & above
7.	5	N.A.
<b>Total</b>		<b>135</b>

The name of villages along with their distances is being shown in Annexure B-2.

Keeping in view the potentialities of a broad-based poultry development programme, it would be desirable to procure and supply the Chicks of better quality of poultry breed. And, this too will require a certain portion of subsidy in addition to other required preventive and curative measures. For providing safety of birds from stray animals, deep litters in large numbers are expected to be demanded by the tribals, if a subsidy is granted to them.

#### Fisheries

3.16 There is also a wide scope of pisciculture in this area. The water suitable for pisciculture is about 10.5 hectares spread over in 11 villages. If organized on scientific lines, with a very small investment, the programme can yield sizeable employment on the one hand and the diet of nutritious value on the other. Plenty of fingerlings to be used for pisciculture are available in

SOURCE WISE IRRIGATION FACILITIES  
BLOCK - KHATIMA  
DISTT. NAINITAL

PUMPING SET(DIESEL)

PRIVATE TUBE WELL

CANAL

PUMPING SET(ELECTRICAL)

DRUGA WELL, RAHAT AND OTHER SOURCE

the Sharda Sagar, thus, there is no problem of availability of fingerlings in the area.

### Irrigation

3.17 The sources of irrigation in the Project area are canals, private tubewells, pumping sets apart from pucca wells and persian wheels. In the year 1977-78 the net irrigated area available in the Project area was 10,561 hectares which was 31.16 per cent of the net area sown. These figures do not favourably equate with the irrigation per centage of the State which was 48.75 per cent of the net area sown. The break up of source-wise irrigated area is given in the following table.

Table 12.  
Source-Wise Irrigated Area

Sl. No.	Source of Irrigation	Number	Area Irrigated (In Hect.)	Percentage to net area irrigated.
1	2	3	4	5
1.	Canal (Km.)	39.5	1,401	13.27
2.	Pumping sets (diesel)	1607	5,594.3	52.97
3.	Private tubewells (electric)	313	2,460.0	23.29
4.	Pumping Sets (Elc.)	21	184.0	1.74
5.	Pucca Well	15	20.0	0.19
6.	Rahat	2	3.0	0.03
7.	Other Sources	-	898.4	8.51
<b>Total</b>		-	<b>10,560.7</b>	<b>100.00</b>

Source : Block Records.

A village-wise account of sources of irrigation and the irrigated area is given in the village directory attached with the report.

It would be seen from the above table that out of 10,561 ha. of land under irrigation, 1,401 hectares are being irrigated by canals, 2,460 hectares by private tube-wells, 5,594 hecta es by diesel pumping sets and rest by other sources. The table also indicates that the diesel pumping sets are very common and about 53 per cent of the net irrigated area is covered by these sets.

### Co-operation

3.18 Since India became independent, efforts were made to ameliorate the condition of the tribals. Because of many factors, both socio-economic and cultural, the benefits could not reach the tribals and they remained backward in comparison to other non-tribals. Their problems were sorted out and a committee of experts suggested the pooling of different co-operative institutions in order to provide unified institutional structure to meet the demands of the tribals. Consequently, Large Area Multi-purpose Societies were constituted vide Registrar, Cooperative Societies Notification No. C-36/Ni/LAMPS dated Lucknow, February 10, 1977. The objective of formation of these LAMPS was to provide credit, marketing and supply of inputs from one place to another. The area of operation of these LAMPS was Nyaya Panchayat.

With the above aim in view, all the existing co-operative societies have been dissolved and LAMPS have come into being. In Khatima block, these LAMPS have been constituted during the year 1977-78. These LAMPS are located at Khatima (South), Khatima (North), Jhankat, Majhola, Nanak Mata, Biria and Sitarganj.

Table - 3  
Details according to LAFIS

-37-

Items	Caste	Khatima (South)	Khatima (North)	Dhanakat	Majholia	Nunak Note	Birba	Sitara Gani	
	2	3	4	5	6	7	8	9	10
Membership (No.)	Tribal	535	507	607	257	344	510	392	
	Others	363	77	483	850	333	407	521	
Share Capital (Rs.)	Tribal	57764	28927	35146	29236	25936	56419	35523	
	Others	58277	11431	78095	102816	46638	48479	61845	
Security (Rs.)	Tribal	5097	20709	30394	3403	1430	2533	566	
	Others	3024	288	2067	7647	1739	2803	1242

	Others	654260	315145	1346355	1305842	568201	620243	585786	5495772	

Thus, we see that about 800 additional tribals got themselves enrolled in the existing LAMPS structure during one year. The total share capital of these tribals stood at Rs. 5,52,116.

3.19 The project area is not deficient so far as electricity is concerned. More than 55 per cent of the tribal villages are served with this facility. All that is needed is to harness this facility for greater welfare of the tribals. Now the possibilities may be that the electric connections may be with those persons who are of new settlers group or of well-to-do higher castes or of high income group families. So there seems to be an imperative need for liberal policies for connections so far as tribals are concerned. Because many villages are connected with power line, 313 private tubewells and 21 pumping sets have been installed and are being used for irrigation facilities. The existence of a number of tubewells has created a potential for safe drinking water supply provided a multi-pronged water supply system is considered. Moreover, the availability of power in too many villages has created a very important infrastructure facility for establishment and development of numerous cottage industries.

So far as village electrification is concerned, 75 villages have already been electrified. The number of villages not yet electrified along with their distances from the facility are being given in the following table.

Table-15  
Number of villages along with their Distances from the Facility.

Sl. No.	Number of villages	Distance from the Facility (In Kms.)
1	2	3
1.	75	Villages already electrified
2.	33	1 and $1\frac{1}{2}$ km.
3.	11	2 Km.
4.	4	3 Km.
5.	5	4 Km.
6.	3	5 Km. and above
7.	4	N.A.

The names of above villages, according to their distances, are given in Annexure B-3.

### Industries

3.20 ' The project area is developing so far as the cottage industries are concerned. Being in the vicinity of forests, basket making is the main cottage industry. Knitting of fishing nets and rice processing, including rice-hulling centres are functioning on small and large scales.

While dealing with existing cottage industries, Khatima itself needs a special mention. It is connected with both rail and road. There are five saw mills in the Project area located at Khatima, Sitarganj, Jhankat, Bidaure and Lam Khera. These saw mills provide a broad base for timber and furniture industries. The transportation of timber and furniture is providing direct and indirect employment in these centres. The forest grass provides a good scope for 'ban' and rope-making, and there is no problem of marketing of the produce, because these things are of common use and are readily in demand. The nearby district of Pilibhit is a good market centre for rope, rice and 'ban'. The maximum number of rice mills operating in village Rampura are fourteen. Rampura village is also having a maximum number of workshop in the area. Rampur village is connected by a pucca road and industrial and domestic power connections are frequent.

The area has two brick-kilns located at Pachpera and Baghaura. These bricks kilns are not able to supply bricks to match the growing needs of the area.

Village Gauri Khera is operating a power crusher which indicates that surplus sugarcane is available in the area which does not find its way to sugar mills. For that matter, still more crushers can be established on certain selected central places to utilize the sugarcane which remains unutilized for want of crushing capacity available all round.

At village Sunkhari Kalan, a small agro-based industrial unit is functioning. The area under oilseeds in the project area is more than one thousand hectares. Therefore, a sizeable quantity of oilseeds is produced, meaning thereby that still more expellers can be planned to establish in order to process the local production.

Roads.

3.21 The project area has two main roads, One, Pucca road passes through project area and connects Tanakpur with Pilibhit. The other road, passing through this area is Khatima-Sitarganj road. Since Tanakpur (district Nainital) is a big Mandi, heavy traffic passes through Khatima. Thirty-four villages of the project area are connected with all-weather pucca roads. The revised minimum needs programme envisages that all villages having a population of 1,500 and above and 50 per cent of the villages, having a population between 1000 and 1500, should be linked with pucca roads during the Plan period 1978-83. But, since the project area is to be attached special considerations, so the norms of road have been lowered to 800 population. One of the reasons for lowering this norms is that there are only 5 villages having a population of 1500 and above, and all of them are connected with pucca roads. Moreover, there are only 32 villages where the population is 800 or more. Amongst these, only 11 villages are not having the pucca road facility. The names of these villages and the distance from pucca road

is given in the following table.

Table 16  
Villages not having Road Facility

Sl. No.	Name of village	Population	Distance from the Pucca Road (Km.)
1	2	3	4
1.	Naugawri Thagu	1,386	3
2.	Khetal Sanda Mustaza.	1,114	8
3.	Sripurbichwa	971	6
4.	Ratanpur	906	3
5.	Bhura Kishni	888	6
6.	Sadhu Negar	880	3
7.	Saraunja	856	3
8.	Barki Dandi	852	2
9.	Bichwa	829	3
10.	Umari Khurd	827	2
11.	Deokali	808	4

While planning for construction of new roads, many other considerations have to be kept in view. The norms can be ignored even if other important functions are located; the road facility would be a necessity. By analysis of the existing data, it has been observed that quite a sizeable populous centres have remained under-developed because of lack of road and transportation facilities.

The name of existing roads along with their length is given in the following table.

Table 17.  
Existing Roads in the Project Area

Sl. No.	Name of Road	Length(in Km.)
1	2	3
1.	Khatima to Kuthangari Via Sitarganj	38
2.	Thualkhera (Bastia to Majholia, Via Khatima)	50
3.	Khatima to Lohiya Head	3
4.	Khatima to Khali Mahuwat	6
5.	Khatima to Madho Tanda	15
6.	Bari Anjanian to Chandeli	4
7.	Pachpera to Pratap Pur	14
8.	Nanakmata to Sunkhari Kalan	5
9.	Bidaure to Salmata	4
10.	Sitarganj to Bijti	6
11.	Rampura to Sarkara	8
12.	Sakti Farm to Sitarganj Kichha Road	16
13.	Sitarganj to Sakti Farm (Burji)	8
Total		177

-:44:-

The following roads are currently under construction by the State Public Works Department and by the Mandi Parishad.

Table 18.

Roads under Construction in Project Area

Sr. No.	Name of the Road	Length	Cost (Lakh' Rs.)
1	2	3	4
<b>I. Under Public Works Deptt.</b>			
1.	Jhankat to Majhola via Savoura, Deuri & Biriya	7.0	7.00
2.	Mundeli to Thaukaiya via Unchi Mahuwat	5.0	5.00
3.	Sitarganj to Nakulia	8.0	15.00
4.	Sisai Khera to Sadhunagar	12.0	20.00
5.	Sitarganj to Sadhunagar	12.0	15.00
6.	Chakerpur to Khetal Ganda Mustaja via Bigrabagh.	9.0	13.00
<b>II. Under Mandi Samiti</b>			
1.	Khatima-Tanakpur Motar Marg to Bhurai	1.0	1.0
<b>Total</b>		54.0	76.00

The Research Team has found out that 54 villages are connected with pucca road. The number of villages not connected by road along with their distances are given below:-

Table - 19  
Number of villages with their distance from the Pucca road

<u>No.</u>	<u>Number of Villages</u>	<u>Distances from Pucca Road (Km.)</u>
1.	54	Connected by Pucca Road
2 .	17	1 and $1\frac{1}{2}$ km.
3.	9	2 km.
4.	19	3 km.
5.	12	4 km.
6.	20	5 km. and above.
7.	4	N.A.

The names of villages, according to their distances are being given in Annexure B-4.

#### SOCIAL SERVICES

##### Education

3.22 Education plays a vital role in the socio-economic development of a community. It is one of the most important inputs for social reconstruction, improvement in the quality of life and preparation of manpower for rapid economic growth. Elementary education is the foundation-stone for moulding the younger generation to assume future responsibilities and develop appropriate values of life. It broadens the outlook, sharpens the intellect and provides broad base for adoption to many modern economic techniques and practices.

There are 67 Junior Basic Schools and 15 Senior Basic Schools in Deori, Jhankat, Khatima, Bharawni, ~~Bichha~~<sup>Puri</sup>, Sitarganj, Rampura, Sisauna, Kutri, Nanakmata, Charubeta, Bidaura, Bendia, Chaujela and Bhajanpur in the Project area. The area has 3 High Schools in Khatima, Sitarganj and Pratap Pur besides two Intermediate Colleges at Khatima and Nanakmata and one Sampark Degree College in Khatima. In order to promote and sustain interest of tribals in getting their children educated, a scheme for establishing Ashram type school is in operation under the national programme of Minimum Needs. Two ashram-type schools, one High School at Khatima and other Junior High School at Bidaura are functioning in the project area. In ashram-type schools, all the facilities regarding text books, stationery, including boarding and lodging, are provided free of cost for the tribal children. The High School at Khatima is managing 40 students and the school at Bidaura has an enrolment of 35 students.

The educational facilities of the Project area have been depicted on the Map - annexed to the report. The map itself indicates the paucity of educational facilities in different pockets of the area.

..... The deficiency, in regard to Junior Basic Schools, has been measured. The Research Team has collected the data regarding this facility and it was found that there were still three villages where a primary school was available only at a distance of more than five kms. These villages along with their distances are given below:

Table 20

Name of the villages	Distance (Km.)
1. Bihi	7
2. Ainchata	6
3. Deopura	6

There are 26 villages where a primary school is needed in order to satisfy the R.M.N.P. norms. The social needs of Tharus also demand this facility in order to broaden their outlook. The following table shows the distance along with the facility-distance.

Table 21  
Number of Villages with their distances from the facility.

(In Kms.)

Sr. No.	Number of Villages	Distance from Primary School
1	2	3
1.	67	School is available
2.	38	1 and $1\frac{1}{2}$ Km.
3.	23	2 Km.
4.	3	5 Km. and above
5.	4	N.A.

The name of villages, according to their distances from a Junior Basic School, are given in Annexure B-5.

The deficiency in regard to S.B.S. has also

- :48- :

been estimated and is given in the following table :

Table 22  
Number of Villages with their Distances  
from the Facility

Sl. No.	Number of Villages	Distances from S.B.S. ( In Km.)
1	2	3
1.	15	School is available
2.	17	1 and 1½ Km.
3.	16	2 Km.
4.	37	3 Km.
5.	20	4 Km.
6.	25	5 Km. and more
7.	5	N.A.

The name of villages, according to their distances, have been shown at Annexure B-6.

#### Medical Facilities

3.23 Medical and health facilities are one of the most important constituents of the social services and provision of adequate health facilities is obligatory on the part of the State. In view of the special circumstances in cultural and socio-economic factors of the tribals, the facilities of medical and public health need special orientation to suit their medical requirements. The specific data of venereal diseases is not available at the P.H.C. level, but it is assumed that quite a sizeable number may be suffering because of their unique socio-cultural background.

-49-

The existing facilities available in the Project area along with their locations, are given in the following table :

Table 23  
Medical Facilities

Sl. No.	Location	P.H.C. Dispens- ary	MCH Centre	F.P. Centre	F.P. Sub. Centre	Sub- Vaccina- tor Centre	
1	2	3	4	5	6	7	8
1.	Khatime	1	-	1	1	-	1
2.	Sitarganj	-	1	1	-	1	1
3.	Nanakmata	-	1	1	-	-	1
4.	Jhanket	-	1	-	-	-	-
5.	Sisunna	-	-	1 ( FWU )	-	-	-
6.	Sripur Bichwa	-	1	-	-	-	-
7.	Bandia	-	-	1	-	-	-

The medical facilities given in the above table have also been depicted in the attached map available with the report. These facilities are scanty and need further strengthening to suit the existing needs. Presence of at least ~~a~~ trained "Dai" is very essential at the time of child birth. Pre and postnatal facilities have to be provided to all the pregnant and lactating mothers. The existing Family Planning Programme puts extra stress on child care with preventive and curative facilities to the growing children apart from these gaps, some programmes of health education have also to be organized in order to inculcate clean habits and personal hygiene among the masses. The recent researches have proved that

:-50:-

serious damages may happen due to protein deficiency.

Since the project area is Taroj, the climate is malarial and people suffer from this disease in considerable numbers, so a special malaria eradication and prevention unit with spraying facilities is badly needed. The incidence of Filaria seems to be high and a programme of Filaria eradication unit is lacking. The Tribals are superstitious in nature and many a time, they call Ojha for treatment of diseases. This practice can only be eradicated with a closely knit health education and easily available medical facilities.

The deficiency in regard to medical facilities, viz., M.C.H., Family Planning Centre/Sub-Centre and Dispensary has also been sorted out and is being shown in the following table:-

Table 24

Number of Villages with their Distances from  
the Facility

Sl. No.	Name of the Facility	Facility available in the village	Distance in Kilometers							
			1 & $1\frac{1}{2}$	2	3	4	5	6	7	8 and above
1	2	3	4	5	6	7	8	9		
1.	M.C.H.	5	7	7	17	22	73	4		
2.	Family Planning Centre/Sub- Centres.	3	5	4	13	12	94	4		
3.	Dispensary	6	4	6	22	27	66	4		

The name of villages, along with their distances from above facilities, are being given at Annexure B-7.

#### Drinking Water Facilities

3.24 The potable water is an essential item so far as the prevention of diseases is concerned. Many stomach diseases are caused by taking water which is not suitable for drinking. The villages of project area are mostly having hand-pumps and wells. These wells are open and chances of contamination of water cannot be ruled out. Even the hand-pumps installed in shallow strata do not provide safe water. The national programme of Revised Minimum Needs places a clear stress on provision of availability of safe drinking water to each and every village of the State. Keeping this in view the area is very backward. The Piped Water Supply Projects of Tanakpur, Sujia Maholia and Terha Ghat serve 20, 22 and 10 villages of Khatima blocks respectively. The existing wells need a parapit wall and a tin-shed as an alternative arrangement, if the resources do not permit to provide piped water.

#### Other Services

3.25 The project area is having the following communication and postal facilities:

##### I. Post Office/Branch Post Office

1. Khatima
2. Nanakmata
3. Jhankat
4. Sara Saria
5. Jarasu Pratappur
6. Bhurmaholia
7. Gaujharia
8. Bhura Kisni
9. Jamaur
10. Sitarganj
11. Silhari
12. Majhola.

II. Telephone/Telegraph Office

1. Khatima
2. Sitarganj
3. Ram Pura
4. Bilhari
5. Nanakmata
6. Khalimahuwet

III. Regulated Mandis

1. Sitarganj
2. Rampura
3. Khatima

IV. Weekly/Tri-Weekly Mandis

1. Sitarganj
2. Rampura
3. Nanakmata

V. Police Post/Thana

1. Khatima
2. Sitarganj
3. Rampura
4. Nanakmata.

By analysing the existing stage of productive and other sectors, it can be concluded that much more is needed to ameliorate the conditions of Tribals in order to strengthen them to meet the challenges of day-to-day life on one hand and to increase their per capita income on the other. With the above objectives in view, a sound programme of all round development is being proposed on scientific lines by using the modern planning techniques.

ANNEXURE A-1

## CHAPTER - IV STRATEGY FOR DEVELOPMENT

The objectives of Area Development Plan should be so formulated as to reflect the State and National priorities and to fulfil the regional developmental needs of the people. It would be necessary to ensure maximum utilisation of resources of the area including the higher production of basic raw materials which could sustain the programme of Agro Based Industries. For formulating the present Integrated Tribal Area Development Project, the Tribal area in Khatima district Nanital has been demarcated on the basis of two criteria i.e. concentration of Tribal population and the contiguity of the area. Following these criteria, in all the 135 villages out of the 250 villages of the Khatima Block have been selected for the project area. Out of these selected villages, 130 are revenue villages and the remaining 5 villages fall under the jurisdiction of Forest Department. The Tribal population of the identified project area is 39329 (46.94 per cent ) of the total population. The selection of area was done with the help and collaboration of Hill Development and Harijan and Social Welfare Departments with a basic idea that no village with a tribal population should be left out.

Tribals cannot be dealt-with in isolation and should be drawn into the main stream of development. Presently, the links which bind them with the rest of the society are exploitative. They suffer from the backwash effects of growth in advanced areas rather than benefit by their progress.

While doing so, care will have to be taken to see that the new links which are forged do not merely replace the old areas. Efforts should be made to build such bridges with an utmost care. While protection from outside exploitative agencies is vital, safeguards will have to be ensured to discourage the emergence of such forces from within the tribals themselves. In devising economic programmes and related activities, social customs, traditions and practices of Tribal life should be respected and the strength derived from them. Traditions based on superstitious belief should be eliminated by organising Health, social Educational Programmes in the one-hand and intensive medical care on the other.

For overall development of the project area, it is necessary to have simultaneous growth in different sectors at the project area level. For this purpose, it is considered necessary to propose the programmes and projects after taking into account the existing resources and all the requirements of the area including infrastructural facilities. An attempt will, therefore, be made to formulate the integrated area development project by integrating the functional and spatial factors for balanced and speedier economic growth. In this connection the identification of planning units (potential centres) would be made and also an adequate arrangement of investment will be ascertained in order to accelerate the growth in the area in an integrated manner. Thus, micro-level planning with the identification of central places will ensure accelerated development of tribal areas and integration of Tribal Communities with the rest of the society.

Under planned development programmes, the sectoral approach and administrative coordination were followed at the block level and spatial integration was entirely missing. For speedier development, economic

growth and raising the standard of living together with solving the spatial problems of the tribals, special spatial integrated tribal area development project should be taken up.

The strategy of the development includes the policy of shifting of sizeable percentage of workers from primary sector i.e. agriculture and allied sectors to secondary and tertiary sectors with the generation of the schemes proposed and for the aforesaid purpose, service centres will be provided for greater employment opportunities. However, a variety of programmes are also being proposed to provide supplementary work and income, specially to the poorer strata of the population. These would include animal husbandry, fishries, dairying, utilisation of forests and fruitfulness and industries related to these items including those of Cottage Industry Units operating in the area will be strengthened and streamlined with the support of organised training cum production centres of Khadi and Gram Udyog Board.

The strategy of Agriculture development programme is as under:

(i) Raising the Cropping Intensity - At present the area sown more than once in the project area is about 2500 ha. with a cropping intensity of 174.7 per cent. This intensity is proposed to be increased to 200 per cent by the end of 1988-89. This will be achieved through judicious crop rotations and introduction of short duration high yielding varieties.

(ii) By utilising the existing culturable waste which is lying unutilised.

(iii) Adoption of intensive agricultural techniques and practices with modern agricultural equipments coupled with greater facilities of irrigation and other allied inputs.

- (iv) Adoption of a suitable cropping pattern.
- (v) Increasing the area under High Yielding Varieties.
- (vi) By extending agricultural credit.
- (vii) Development of a well organised market for agricultural produce.

Since the sizeable number of the cultivators of the project area fall in the category of small and marginal farmers, the proposed programmes for agriculture development alone will not be sufficient to boost up the economy. Therefore, the priority will also be given to the subsidiary occupations like animal husbandry, fisheries and village and small scale Industries.

Animal Husbandry offers a more promising field. Tharus have begun to milk their cows, therefore the strategy of this sector would be based on cows, Buffaloes, sheeps and goats. Majority of the milch cattle in the project area are indigenous. There is also an inadequacy of preventive and curative facilities to cover the entire cattle population with the result that average milk yield is low. In order to upgrade the breed of milch cattle and enhance the average milk yield, it would be necessary to undertake programmes of scientific breeding, disease control and fodder development on priority basis. Specific steps will also have to be taken to ensure that the benefits of the programmes go to the poorer sections and lower caste groups.

Along with the above steps, certain industries related to these activities can be developed. Attempts at industrial development will have to be of a modest nature to begin with e.g. small and cottage industries which can be carried on to the very door steps of the

workers and the produce being sold and consumed locally. Production for the out-side market can come later.

The infrastructure for the area has also to be thought of specifically in terms of how to take the benefits to the local population. A road system that opens up the area will be taken up according to the national norms of R.M.N.P.

The proposal to increase the cropping intensity from 174.7 to 200 per cent can only be fulfilled by increasing the area under irrigation. So, likewise, suitable steps have been proposed for increase in irrigated area. The desirable 25% increase in irrigated area can be ensured through installation of State tubewells, private tubewells and pumping sets. This will facilitate in bringing about maximum possible area under high yielding varieties and improving the average yield per hectare of important crops.

So far the programme of electrification is concerned, all the remaining villages having population of 800 or more shall be served with this facility.

The national norms evolved by the planning Commission for provision of social facilities like primary education and medical facilities will not be rigidly adhered to. The development of these facilities will be taken keeping the special circumstances of the area in mind. It is felt necessary to modify these norms by adopting the integrated area development approach. Thus, the choice of places will be made by the local analysis for providing social facilities.

The existing Cooperative Structure of the project area is to be strengthened in such a way that the benefits of credit liberally reach the tribal population in order to ensure that the proposed facilities are not entirely exploited by the non-tribals. For further

safeguarding the interests of the tribal population, an effective police-protection has also to be provided for. Many social facilities will be opened for use of both the tribal and non tribal groups viz. Roads, Power-Lines and water supply etc.

In view of inaccessibility, the tribals are compelled to sell their agricultural produce at throw-away prices. The proposed marketing facilities would go over come such constraints and prevent the middlemen, to extract huge profits.

The strategy of development includes and makes provision for a joint council of representatives of tribals along with the officials of different agencies in the area (including police) to prevent any type of encroachment on their land and any other social injustice caused to them. This could socially and psychologically strengthen them to meet the challenges of their day to day life. The problem of land alienation of the areas has been under the active consideration of the Govt. and legal cover or protection is in operation but the operating machinery has to ensure its strict implementation.

. . . . The proposed programme of development will need a radical change in the outlook of the personnel of the implementing machinery. This can further be facilitated through various alternatives viz. recruiting as many persons from tribal community as possible, finding out the officials from among the working tribals like A.D.O.S., B.D.O., Tahsildar and S.D.M. etc. or assigning officials who

have special antitude for the welfare of tribals and members of scheduled castes etc. The village health workers should be from amongst the educated tribals. A care has to be taken to recruit as many tribals ( Tharus) as possible in the cadre of village level workers, basic health workers health inspectors, Cooperative seed store incharges. This seems to be essential in the light of a tendency of higher Caste Officials to get transferred from that place and also with a view to establish workable relationship between the tribals and the officials of the area. Since the Tharus of the area have been down trodden they are unable to gather courage to mobilize and utilize the official machinary and the facilities.

## CHAPTER V INTEGRATED AREA DEVELOPMENT APPROACH AND IDENTIFICATION OF CENTRAL PLACES

The norms of different programmes formulated for the whole of the State need not be observed in these tribal pockets with dissimilar problems. It is significant to go through in a detailed study of the specific area. In this context, the project area is not similar to other tribal areas. Although the total economy of the area revolves round the key sector of agriculture, even then the tribals possess their own characteristics of artisan skills and their own self-sufficient way of life. It is said that "the tribals of U.P. are a colourful people, who in spite of the economic backwardness, sing and dance and try to enjoy life. The tribal way of life represents one of the facets of the unique characteristics of the Indian culture-unit in Diversity."

The problems of the area more or less are the same as of other non-tribal blocks. Techniques of growth centres strategy has been adopted to prepare a micro-level plan. In other words, planning from grass-root level for the area development plan has also been given due consideration. Such techniques would satisfy the felt-needs and socio-cultural problems of this area by delineating the zones of influence of the central places to meet the acute problems inherent among the local people and accelerate and penetrate the effect of proposed developmental programmes up to village, hamlet, family and finally, to individual levels. In this way, this project will not only remove the economic and infrastructural gaps in this area, but fully awaken the tribals to have an active participation in the mainstream

## GROWTH CENTRES AS A TECHNIQUE FOR INTEGRATED AREA DEVELOPMENT

Since inception of planning process in India, efforts have been made to maximise the economic and social justice to the people. For this purpose, community development programmes were evolved to meet the challenge of development. A team of subject matter specialist has been functioning at block level with specific programmes and priorities decided at the macro-level. The experience shows that this approach has partly failed in providing a necessary economic and social justice and removing the existing gaps. A new concept of integrated area development has been evolved by some human geographers and other research scholars. This concept refers to an appropriate location of social and economic activities over a physical space for a balanced and rapid development of an area. It suggests a framework for decentralised concentration of economic and social activities by locating specific functions at appropriate places. Thus, integration of functional and spatial factors is an essential feature of an integrated area development plan. Planners have devised 'growth centres' as necessary inputs for maximising economic and social benefits to all the people living with in their hinterlands. However before discussing growth centres, a crucial question arises whether this technique would be suitable for the tribal areas or not. It is clear from the above discussion that the problems and other characteristics of the areas are similar to the other non-tribal areas. Hence, concept of growth centres as adopted for the development of other areas, can be equally applicable in the study area for the development of tribal communities. Again, it may be an obvious fact that development of an area, may not be an indicator of tribal development and it may be possible to visualise a situation where the tribal communities may not be properly benefitted even though the area itself happens to be developed. In some cases,

the position of tribal communities may deteriorate without showing any effect on area development. The widening gulf between the poor and the rich, even though our economy is growing, is one of the basic problems which is sought to be tackled in the current plan by accepting growth with social justice as a basic objective.

In spite of more similarities, the problems of tribal areas are peculiar in nature as compared to more advanced areas in a rural setting. The socio-economic equations get changed as soon as the process of development sets in to operate in any area.

### THE CONCEPT AND ITS APPLICATION

The historical background of this technique provides a sound base for utilizing this theory, which is very much relevant to develop a backward area. Planning is a continuous process and efforts were already made for the planned development of the area but since achievements were not found up to the mark, some special efforts are called for. In the recent past, some eminent scholars did evolve several scientific theories which can be put to use for development of a particular area. Economic developmental process has a tendency to create imbalances which needs certain corrective measures on scientific lines to rationalise the process of developmental activities. The theoretical advancement in the field of growth centres has been developed recently. The concept emerged in the theory of location of industries formulated by Alfred Weber in 1910. In the nineteen thirties, Christaller introduced the central place theory. This theory is based on the idea of minimum distance travelled to avail the maximum facilities. The theory was further refined by August Losch, Walter Isard, Torsten Hagerstrand, Gunnar Myrdal and others. The growth pole theory was advocated by Perroux and later modified by others. Application of

location and central place theories in development planning has been carried out in almost every part of the world. Its use in East European Countries like Hungary, Bulgaria and Poland is of particular relevance to India.

The main points of difference in tribal areas and the other developed areas can be summarised as follows:

(1) Conceptually, growth centre is a more advanced nodal point in a small region compared with its periphery. Development means series of innovative actions whose benefits can be absorbed by the local communities. Here, a growth centre, can absorb innovations at a much faster rate than even a comparable unit in an advanced area because of immigrant character of its population. Thus, the growth centre can perform the function of assimilating innovations and disseminating its benefits to the population of the hinter land.

(2) The growth centre techniques may not be applicable to a Tribal area on some other ground. The socio-economic situations of such an area may be of a "pre-growth centre stage". There may not be any central point with different functions. It may be possible that higher level functions are performed at point chosen temporarily by the local community by mutual consent from time to time. Thus, the growth centre technique applied for tribal area needs considerable refinement before it can be usefully applied to any such area. The examination of operational aspects in identifying the growth centres and assigning functions to them in development of the area has therefore to be done in greater details to make use of this technique.

The objectives of micro-level planning are to bring the process of development down to the village-level, so that fruits of development can be shared by as many people

as possible. Keeping this aim in view, the planner's task is to identify the optimum and viable unit of planning which should be as close to the village as possible. For practical purposes, a planning unit consisting of a cluster of villages of varying sizes, should be delineated. The actual locations for investments and accruing the benefits to the last man, can then be identified.

#### IDENTIFICATION OF CENTRAL PLACES

A survey of Khatima Block, district Nainital, for collection of primary and secondary data was conducted in all the 135 villages. Information on people's preferences for centres offering various services was also gathered. The population thresholds of various functions were considered. The entry point of each function at a specific population level was taken as the threshold of each function. For example, Junior Basic School first appeared in the Block at a very low population level. Below this, no Junior Basic School is found. Above this level, practically, all settlements should have Junior Basic School, if not, it is accounted as gap. On the other hand, colleges first appear at a much higher population level, for example, there is only one Samprak degree college at Khatima town, in the study area. A comparison of population thresholds of primary school and college shows that they belong to two distinctly separate levels. It may be noted that functionally colleges are also much specialised and complex than primary schools.

One can visualize multi-level hierarchy of many functions in the case of primary schools and colleges. In order to identify such a hierarchy, the population threshold of each function was plotted against each settlements for the study of hierarchical order of settlements under study.

By the above discussion, it is clear enough that a comprehensive study has been conducted through the field survey. The settlement pattern of study area, level of development and its pattern provides a very good base for planning the development of sub-regions for the speedy development of the area with the available economic resources and prevailing socio-cultural organisations.

The study area is predominated by agriculture and peculiar in socio-cultural background. Efforts have been made for providing developmental activities suited to the condition prevailing in the Project area. In this area, the total tribal population is 39,329 (1971) residing in 135 villages which forms a composite part. In this context the central places have been devised through which we can examine present infrastructural facilities, and can locate other facilities for removing the gaps.

The maximum travel distance for each central place as prevailing in the area for availing various facilities have been examined and provided against each central place. This will be an indicator for the consideration of provision for different facilities at central places in the area. It will also help in examining the gaps in the norm provided by the State Government. For instance, maximum travel distance for Junior Basic School and Senior Basic School as fixed by the Govt. are 1.5 km. and 3 kms. respectively where as in the project area these work out to be 6 kms. and 7 kms. respectively. For the measurement of centrality of functions and settlements and their hierarchy, different methods have been tried by the eminent research scholars and social planners. "Planning Rural Growth Centres for Integrated Area Development study conducted by L.K. Sen and others have examined three methods in which scalogram analysis or Gutman Scale has been tried. Same method has been adopted in this

project for all the 135 settlements for identifying of the Central places and their respective hierarchy. Population, Electricity, Education, Roads, Veterinary facilities, agricultural facilities etc. in all 35 infrastructural facilities available in the area have been considered to work out central places. These functions are mentioned below:-

First Level ( Lower Order )

1. Junior Basic School
2. Electricity
3. Road facilities
4. Senior Basic School
5. A.I. Centre/Sub Centre
6. Post Office
7. Stock Man Centre
8. Seed/Fertiliser distribution Centre
9. V.L.W. Head Quarter
10. Panchayat Sewak H.Q.
11. LAMPS
12. Market/Shop
13. Medicine Shop
14. Dispensary
15. M.C.H. Centre
16. Bus Shop
17. Private Doctor
18. Nyaya Panchayat H.Q.
19. Controlled Cloth Shop
20. Fair Price Shop
21. Police Chowki

Second Level (Middle Order )

1. Inter College
2. Veterinary Hospital
3. Agriculture Implement Repairing Shop
4. High School
5. Family Planning Centre

6. Police Station.
7. Community Centre/Panchayat Ghar
8. Primary Health Centre.
9. Commercial Bank.

Third Level ( Higher Order )

1. Regulated Market
2. Degree College
3. Telegraph Office
4. Industrial Unit
5. Cinema Hall

Infrastructural facilities were arranged horizontally settlements Vertically and facilities thus marked against each settlement. Total number of types and units of functions ranked accordingly were calculated and shown in the scogram. Institutional hierarchy of settlements in the area was also proved and established on the basis of the scogram method. Once the hierarchy of settlements are established then the different level of service centres and their service areas emerge out with the help of space preferences for the facilities being used by the people. After identification of central places and service centres and the service areas served by them, it becomes easy to fill the noticeable gaps with some judicious provision of developmental facilities. This exercise helps to assess the developmental pace, down to the grass root level i.e., village unit. Since each and every village can not be a sustained unit to locate each and every facility, but at the same time benefit must accrue to them regarding different facilities, so the device of planning units with their central places, is quite suitable to meet the above objective.

The identified central places along with their population and settlement served, total number of functions, ranks etc. have been given in the following table:-

Sl. No.	Central Places	Popula- tion (1971)	Total number of sett- lement served	Total pop. served	Total num. of functions	Rank
1	2	3	4	5	6	7

#### Ist Level (Growth Centre )

In the Project Area, all villages have been considered for the central places as discussed above. In the study area 35 policy and non policy functions have been considered for the selection of central places. All the 135 villages were arranged in hierarchical order with the help of scalogram technique. An exercise on the map has been done using different distance criterion for different order of 18 selected places and its importance for its zone of influence or service area. Aerial division has been done on the map using different distance criterion for the different order of places. For considering above, these settlements have been placed in the following manner along with existing/proposed functions and facilities.

Central Places	Existing Functions	Proposed Functions/Facilities
1	2	3
1. Khatima ( T.A.)	Electricity, Pucca Road, Post Office, Telegraph Office, Junior Basic School, Senior Basic School, High School, Inter College, Sampark Degree College, Seed/Fertilizer/Pesticides distribution Centre, Regulated market, Veterinary Hospital, Stockman Centre, A.I. Centre, Primary Health Centre, Family Planning Centre, M.C.H. Centre, V.L.W. Head Quarter, Panchayat Sewak Head Quarter, Nayaya Panchayat Head Quarter, Controlled Cloth Shop, Fair Price Shop, Police Station, Chowki, LAMP (2) Mandi Samiti, Industrial Units, Community Centre, Market, Bus Stop, Medicine Shop, Private Doctor, Bank, Television, Cinema Hall.	Upgradation of existing High School (A.T.S.) into Inter College, A purchasing centre of agricultural surpluses with the provision of a storage facility, Cold Storage, A Buffer store for fertilizer, Agro-service centre/Agricultural Implements manufacturing unit with the facility of its repair, Multi cropping Scheme's Head Quarter, Oil Seed Package Schemes Centre, Deep Freez Unit For flesh and poultry. A mobile health care unit for tribals attached with P.H.C. Khatima with the provision of a Van, up grading of Primary Health Centre to a 30 bedded hospital with the provision of specialised medical facilities, Provision of one female Doctor at Primary Health Centre, Agro based Industries, Forest based Industries, building materials Industries, Industries based on Animal Husbandry, Mini Oil Mill, Fertiliser Mixing Plant, Cattle feed unit/poultry feed unit, Cycle Parts Manufacturing Unit, One G.T. bucket and trunks manufacturing Unit, Organisation of improved marketing system with its Office at Khatima for tribal hand made products and its refinement,

### SERVICE CENTRES AND THEIR HINTERLAND

CHAPTER - VI  
PROPOSED PROGRAMMES

AGRICULTURE

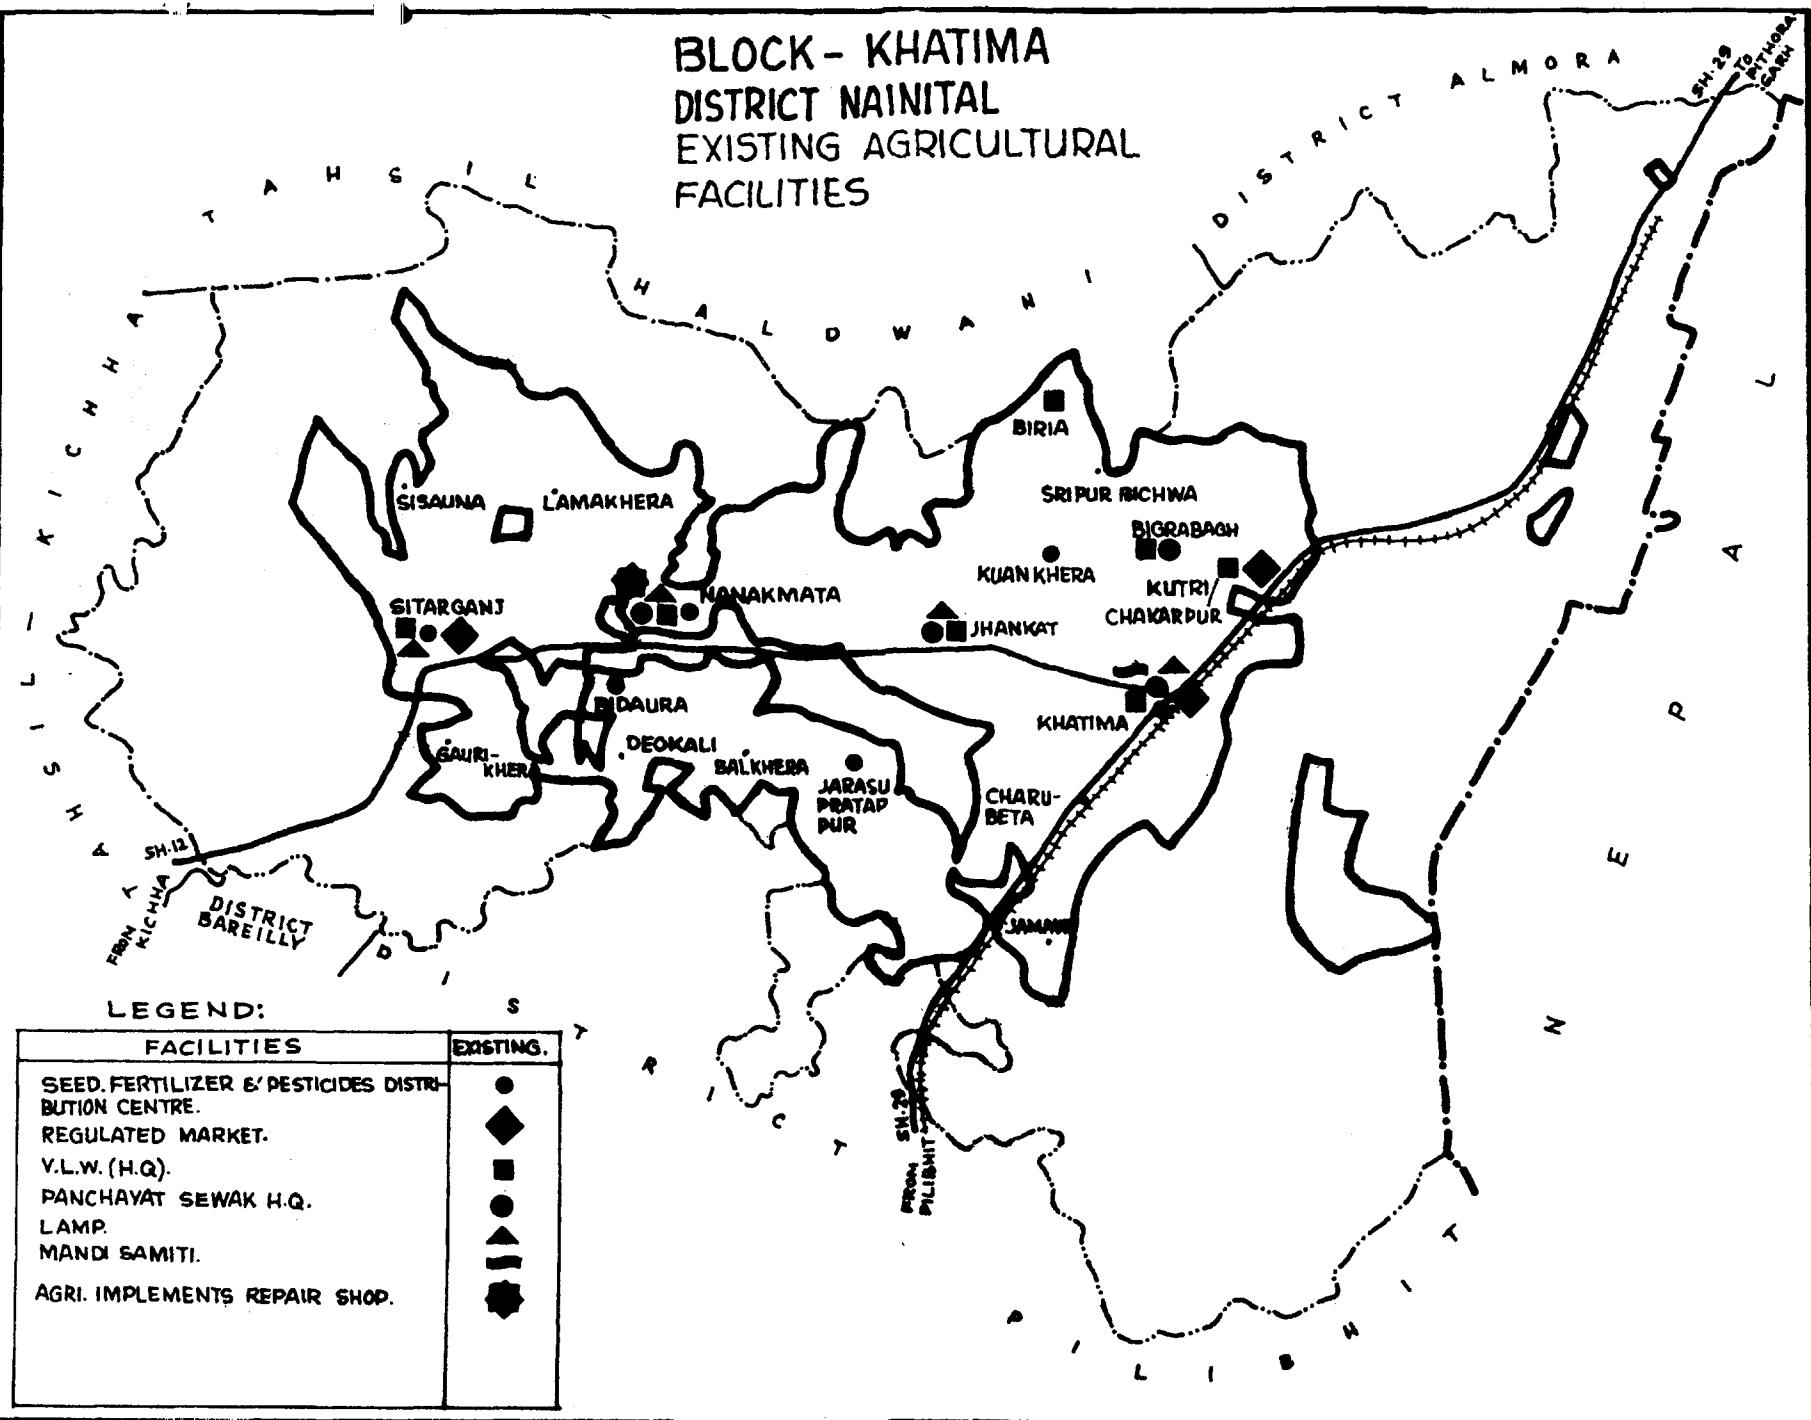

Agriculture is the predominant occupation of the project area. It employs 76.0 per cent of the total workers of the area. In order to provide a proper conceptual framework for planning agricultural programmes different alternatives have been thought over in the light of various factors like financial returns, risks involved and maximisation of employment opportunities together with the idea of increasing productivity in case of food grains, oil seeds and sugar cane. The area has fertile land and sufficient resources of surface and ground water. Efforts made so far in stepping up agricultural production has yielded good results, particularly with the adoption of high yielding varieties of major cereal crops. The Khatima project area is very near to the agricultural university of Pant Nagar where Terai Development Corporation is functioning with an enormous capacity of production of certified seeds. The cropping pattern of the area has thus, undergone a major change in so far as the increase in productivity of some major crops (like wheat, paddy, Sugarcane etc.) is concerned. On the other hand, production of pulses has registered gradual decline. It is becoming increasingly clear that whether from the State or the district point of view, the entire cropping pattern will have to be reorganised so as to reduce the area under sugarcane with increase in production and widen the coverage under fruit trees, pulses, oil seeds, vegetables and fodder crops.

The targeted increase in the production of cereals is sought to be brought about mainly, through the adoption of package of improved practices, which would result in increase in per ha. yield. The programme of agricultural

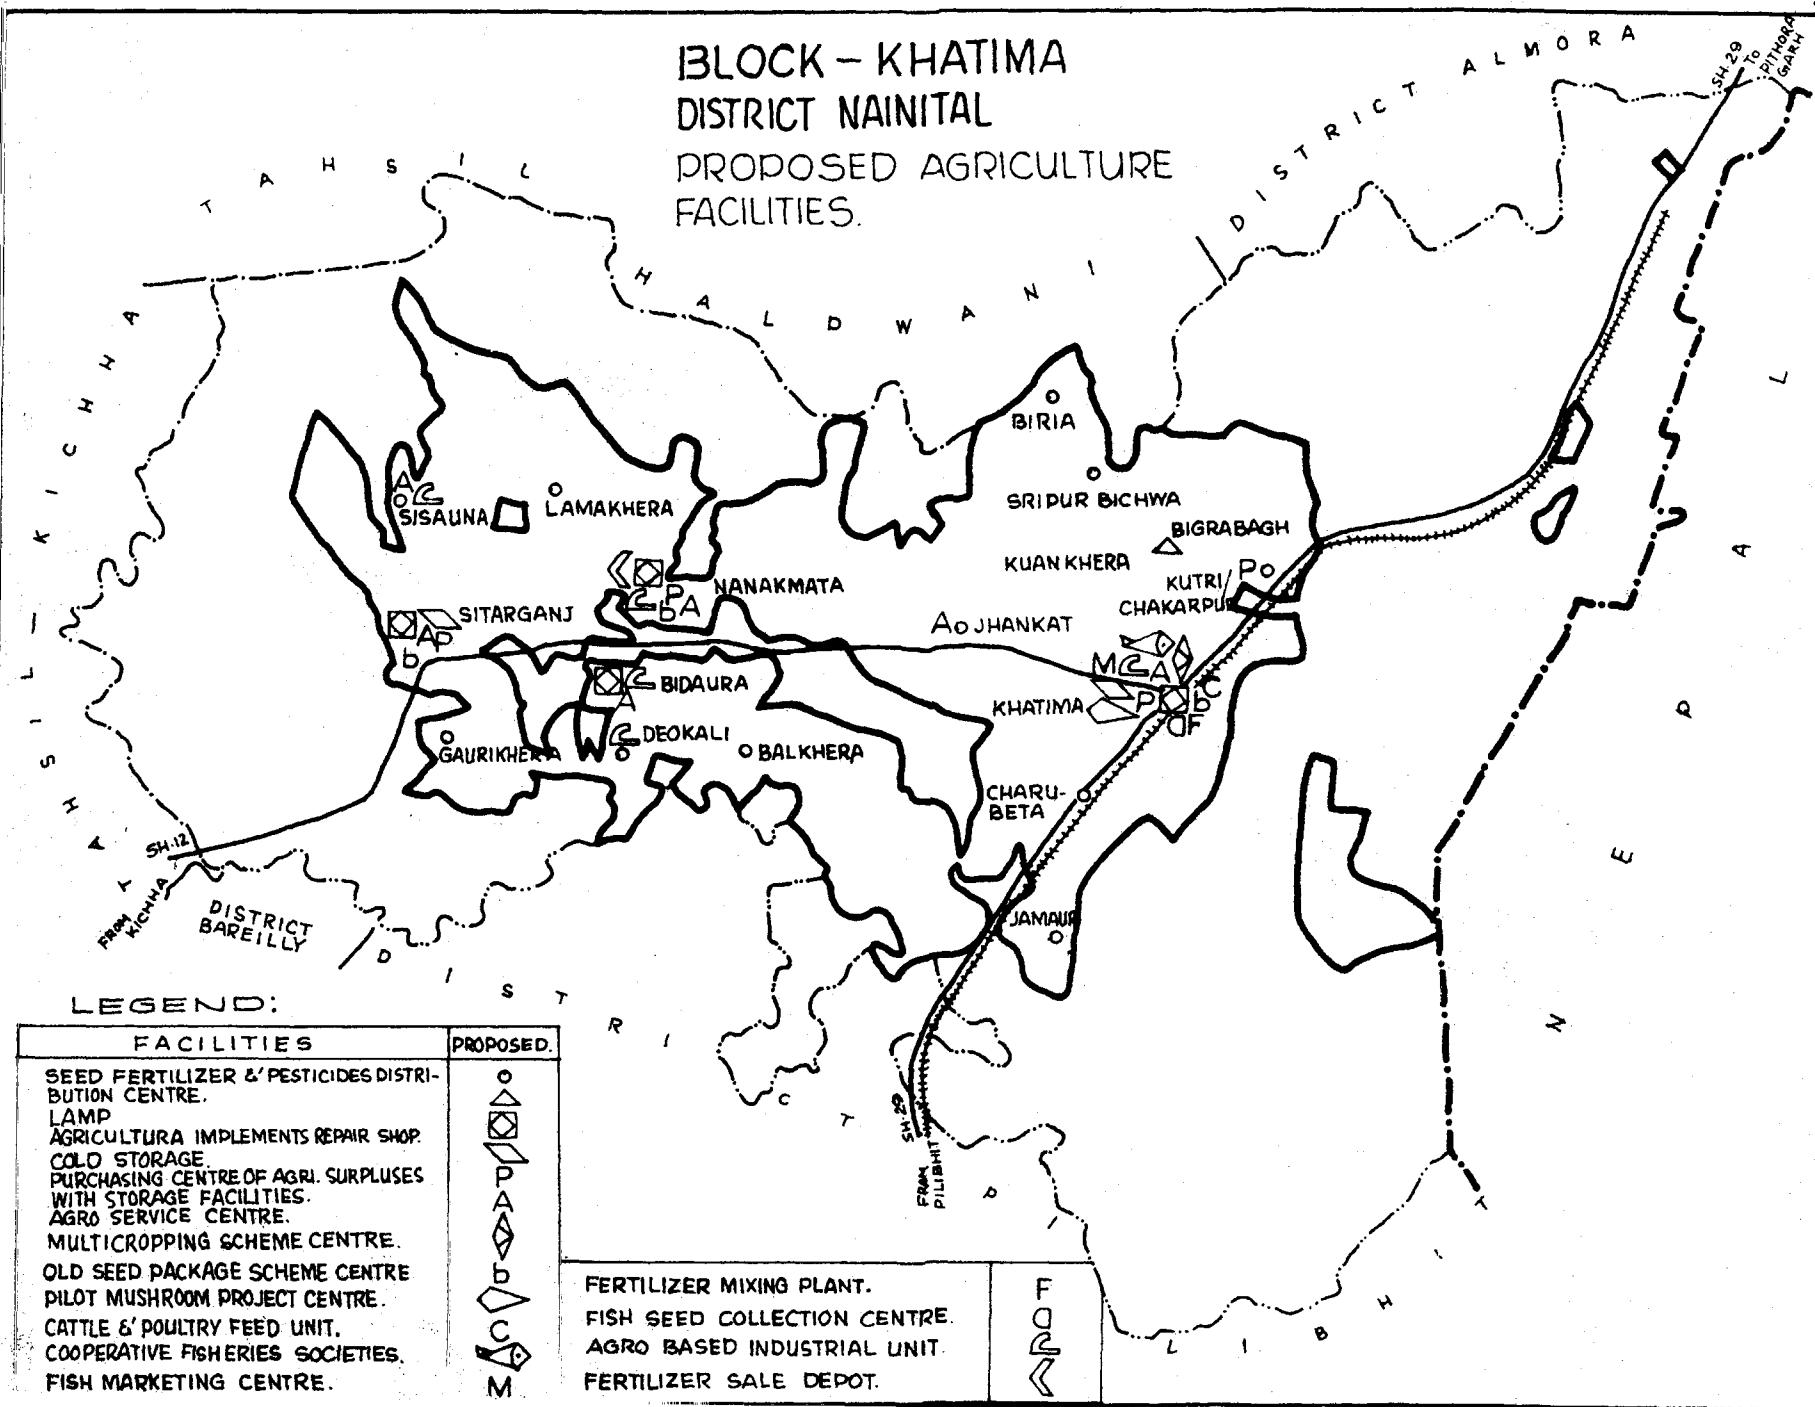

development is being chalked out, keeping in view the available local potential and suitability of different crops along with a sound policy to make available all the required inputs at the minimum travel distance. The project area has already attained an advanced level of development, intensity of cropping of the area is still higher than the State average. For that matter, the agricultural plan of the project area may not compare favourably with any backward area having the cropping intensity below the state average. The programmes which are being dealt in detail include increase in irrigation potential, establishment of seed and fertilizer centres, organisation of plant protection measures, establishment of processing units of raw materials available, creation of proper marketing facilities for marketable surpluses of agricultural produce together with an effort to balance secondary and tertiary sectors in order to utilize optimal available manpower to increase the income of the family. This would provide a greater social justice and an equitable distribution of income among the tribals which would enable them to join mainstream of society at the earliest possible.

The existing land use pattern available in this report indicates that about 500 hectares of culturable land is lying as waste. This land is proposed to be brought under plough. It is also clear from the land use data that extensive production measures can not be adopted because the net area sown has almost reached an optimum level; So the strategy of agricultural development mainly rests on the policy of increased intensive cultivation measures and shifting of area under less profitable crops to higher profitable crops. The proposed

BLOCK - KHATIMA  
DISTRICT NAINITAL  
EXISTING AGRICULTURAL  
FACILITIES

BLOCK - KHATIMA  
DISTRICT NAINITAL  
PROPOSED AGRICULTURE  
FACILITIES.

cropping pattern of this area for the plan period is given in the table below:

Table  
Proposed Cropping Pattern

(Area in ha.)

Sl.No.	Crops	1980-81	1981-82	1982-83	1983-84	1984-85
1	2	3	4	5	6	7
1.	Paddy	26092	26311	26630	27049	27568
2.	Maize	1666	1774	1882	1990	2098
3.	Wheat	15394	15744	16094	16444	16800
4.	Gram	4117	4230	4340	4450	4560
5.	Potato	172	280	390	500	610
6.	Sugarcane	3212	3212	3212	3212	3212
7.	Oil Seeds	1097	1217	1337	1457	1587
8.	Vegetable	362	463	565	667	769
9.	Barley	583	558	533	513	493
10.	Peas	1231	1452	1673	1894	2115
11.	Others	2448	2267	2086	1905	1724
12.	Moong	108	132	156	180	204
<b>TOTAL</b>		<b>56472</b>	<b>57690</b>	<b>58898</b>	<b>60261</b>	<b>61740</b>

#### Agricultural Production

The Proposed increase of additional 34.84 thousand tonnes of foodgrains by the end of 1988-89 is based on the assumption that the average yield of the foodgrains of the State is higher than the average yield of the project area, hence, there is still ample scope to enhance the per hectare

yield. Year-wise production of foodgrains in metric tonne with 4 per cent rate of increase are given below:

Table  
Year-wise production of food grains

Year	Production in tonnes	Increase in Yield (M.T.)
1	2	3
1978-79	72556	-
79-80	75458	2902
80-81	78477	3019
81-82	81612	3135
82-83	84876	3264
83-84	88275	3399
84-85	91803	3528
85-86	95473	3670
86-87	99298	3825
87-88	103271	3973
88-89	107399	4128

The proposed increase in food grains indicated above needs further break up so far as the crops are concerned. The following table gives the break up of these crops.

Table.  
Phasing of Increase In Yield (yield in M.T.)

Sl.No.	Crops	1979-80	80-81	81-82	82-83	83-84	84-85
1.	2	3	4	5	6	7	8
1.	Paddy	32352	33646	34992	36393	37849	39363
2.	Maize	2071	2154	2340	2330	2423	2520
3.	Wheat	24879	25812	26844	27919	29036	30197
4.	Gram	3171	3298	3430	3567	3710	3858
5.	Ground Nut	24	26	29	32	35	39
6.	Potato	290	319	351	386	425	467
7.	Oil Seed	1069	1176	1293	1423	1565	1722

The above table shows the net increase of 13445 M.T. food grains is based on the assumption that cereals will be increased at the rate of 4 per cent per annum excluding the production of pulses.

The cultivation of pulses i.e. Arhar is not popular in this area because of its topographical conditions. The area gets waterlogged which is unfavourable for Arhar cultivation and is most favourable for Paddy. The food habits of Tharus do not include Arhar instead they use 'CHAKHANA'. Some times they use Nessor pulse which is grown in small area according to their convenience.

The existing culturable waste is proposed to be utilised according to the crops given in the table below:

Table  
Utilization of Culturable Waste

Sl. No.	Crops	( Area in ha.)				
		1980-81	81-82	82-83	83-84	84-85
1	2	3	4	5	6	7
1.	Paddy	80	140	180	225	260
2.	Maize	10	15	25	30	40
3.	Wheat	70	120	155	200	240
4.	Gram	10	10	20	20	30
5.	Mustard	10	15	20	25	30
TOTAL		180	300	400	500	600

1 'CHAKHANA' is a dish prepared with potato, spices and chillies boiled with water. This preparation mostly used with rice and is commonly known as Chakhana.

The phasing of utilization of culturable waste has been done on the basis of increase in intensity of cropping. The irrigation potential is also planned towards sizeable increase and other facilities will have the way for higher percentage of cropping intensity.

#### Cash Crops

The predominant cash crops in the area are Sugarcane, Potato, Vegetables & Oilseeds. Their percentage to net area sown is given as under:

Crops	Percent
1. Oil Seeds	3.27
2. Sugar Cane	1.75
3. Potato & Vegetables	1.0

The percentages given above under cash crops are meagre, and hectic efforts are required to increase the area and production of cash crops in order to raise the income of the cultivators. The proposed increase in production of cash crops including oil seeds has been given in the following table:

Table  
Phasing of increase in Yield of Commercial Crops

Sl.No.	Crops	YEARS					(Yield in M.T.)
		1980-81	81-82	82-83	83-84	84-85	
1	2	3	4	5	6	7	
1.	Potato	319	351	386	425	467	
2.	Oil Seeds	1176	1293	1423	1565	1722	
3.	Sugarcane	64240	64500	65000	65500	66000	

## High Yielding Varieties

The existing use of H.Y.V. seeds is quite high because of radiation effect of Pant Nagar Agricultural University which is rather very near to Project Area. The area under H.Y.V. of different crops is given in the following table :

Table  
Area Under High Yielding Varieties

(Area in ha.)

Sl. No.	Crops	Total area	Total area under H.Y.V.	Percentage to total area under the crop	proposed targets of H.Y.V. (in per cent )	1980-84	1984-89
		3	4	5	6	7	
1	2						
1.	Paddy	26045	16323	62.67	80.00	100.00	
2.	Maize	1528	246	16.10	25.00	35.00	
3.	Wheat	15394	12905	83.33	90.00	100.00	

The increase in H.Y.V. area under different crops has been proposed keeping in view the existing percentage of the Hybrid varieties. It is beyond doubt that there is wide adaptability of improved agricultural practices as far as the seed is concerned. But no information is available of tribal families to ascertain their specified quantum of adaptability. Of course it can be assumed that through the radiation effect of new progressive settlers, the tribals must have adapted to a great extent. The research team while extensively visiting the area has observed that a pace of modern civilization and techniques have been introduced, the wheels have started rolling, only they need acceleration. Increased use of H.Y.V. Seeds is interlinked with use of chemical fertilizers and irrigation facilities as have been observed. The per ha. use of chemical fertilizer during the year

1977-78 is N.44, P.3.2 & K. 3.3 Kg. per hectare respectively. While proposing the area under H.Y.V. seed, consideration of availability and consumption of fertilizer has been taken care of.

#### Crop Rotation

It has been stated above that the intensity of cropping is proposed to be increased from 175 to 200 by utilising culturable waste on the one hand and increasing the area under different crops. The increase in area under different crops can only be augmented by changing the existing crop rotations and introduction of short duration crops coupled with early growing varieties. Different crops rotations are suggested in order to suit different pockets of the project area:

##### I.

1. Paddy - Potato - Wheat
2. Sugarcane - Maize - Wheat
3. Sugarcane - Maize - Potato - Wheat
4. Paddy - Oilseed - Wheat - Summer Vegetables.

##### II.

1. Paddy - Pea - Vegetables
2. Maize - Gram - Potato
3. Paddy - Wheat - Moong
4. Paddy - Wheat.

##### III.

1. Paddy - Berseem - Potato
2. Paddy - Potato - Chari.

#### Chemical Fertilizer

The use of chemical fertilizers is dependent on irrigation facilities and H.Y.V. As the Project area is comparatively progressive in use of H.Y.V. the additional irrigation facility will automatically ensure the use of fertilizers in form of N.P.K. As the

-:124:-

intensity of cropping of the project area is planned to increase from 175 per cent to 200 per cent of the net area sown, the repeatability of the crops demands more of fertilizers and irrigation because the humous and moister of the land gets degenerated. In order to increase and maintain the fertility of the area more of the fertilizers have to be used. Thus it is proposed that the quantum of N.P.K. per ha. in the project area will be 80:10:10 as N.P.K. respectively. Besides, the tribals will be using as much of the farm manure as possible. The advised dose of 80 Kg.  $N_2$ , 10 Kg.  $P_2O_5$  and 10 Kg.  $K_2O$  per hect. is seemingly high because the existing consumption of fertilizer per ha. is very small. Thus on existing gross cropped area the requirement of the chemical fertilizer will be as follows:

Table  
Requirement of Chemical Fertilizers

( in Kg.)

Sl. No.	Fertilizers	Consum- ption per ha.	Proposed Use				
			1980-81	81-82	82-83	83-84	84- 85
1	2	3	4	5	6	7	8
1.	Nitrogen	80	320	360	400	520	640
2.	Phosphatic	10	40	45	50	65	80
3.	Potash	10	40	45	50	65	80

The soil testing of the area has revealed that there is very small need for P & K fertilizers. While proposing the doses of chemical fertilizers per hectares the above mentioned findings have also been considered. The Nitrogenous fertilizers are widely used in Paddy and Wheat. Fifty per cent subsidy component in fertilizer distribution programme will be made available only to the tribal people of the project area.

### Increase in Intensity of Cropping

Increase in intensity of cropping has been proposed at 200 per cent of net area sown. This has been augmented by increasing the net area sown to the extent of fuller utilization of culturable waste, increased irrigation potential, by adopting judicious crop rotations supported by institutional framework and infrastructural facilities.

### Improved Agricultural Implements

The data of improved agricultural implements made available by the Block Development Office clearly indicates that there is wide spread adaption of improved agricultural implements but it is not known, to what extent the tribals have adopted these implements. The data about tribals and non tribals regarding these items is not available at the Block head quarter. So the fifty per cent subsidy component being proposed for these items will be available only to tribal people. The following table gives the proposals for distribution of agricultural implements on subsidised rates.

Table  
Distribution of Agricultural Implements

Sl. No.	Implements	YEARS					Total
		1980-81	81-82	82-83	83-84	84-85	
1	2	3	4	5	6	7	8
1.	Cultivators Nos.	20	20	20	20	20	100
2.	Power Threshers- Nos.	10	10	10	10	10	50
3.	Handhoes Nos.	10	10	10	10	10	50
4.	Mould board Plough	50	50	50	50	50	250
5.	62 Discharrow	10	10	10	10	10	50
6.	Cheff Cutter	10	10	10	10	10	50
7.	Singh Peta	5	5	5	5	5	25
8.	Neo Pack Sprayer	5	5	5	5	5	25
9.	Grainbins	20	20	20	20	20	100

The total required outlay for the above 700 implements will be Rs. 2.05 lakh.

#### Compost Making

The fecundity of soil decreases as the intensity of cropping increases. Thus, there is inverse relationship between the two. The chemical fertilizer use provide a boost to the crops but it does contribute to the fertility of the soil. The soil fertility is very much dependant on humous which comes from Cow-dung, leaves and green manuring etc. therefore, while advocating for higher doses of chemical fertilizers, the compost can never be ignored; The tribal families of the area have plenty of cattle and so the availability of cow-dung is not a problem. About half of the available cow dung is used as a fuel and the rest is not stored on scientific lines resulting less preservation of nitrogen and humous. For conserving humous and retaining the fertility of the soil, a sizeable programme of compost pits is being proposed. During the plan period, it is proposed that, all the families have at least one compost pit. The size of the compost pit would be 3 metres long, 2 metres wide and 1 metre deep. It would be made of pucca bricks so that the nitrogen is preserved. The year-wise construction programme of compost pits is given in the following table:

Table  
Year-Wise Programme of Compost Pit

Items	YEARS					Total
	1980-81	81-82	82-83	83-84	84-85	
1.Compost Pits(Nos.)	100	200	350	400	450	1500

The subsidy component in this programme will be 50 per cent of the total cost of the pit. It is estimated that every pit will cost Rs. 550. The subsidy will be available in the form of material like cement, bricks etc.

In order to enhance the nitrogen in the compost, the experts are of the opinion that, it is possible by mixing rock phosphate in the form of  $P_2O_5$ . The dose advised is 12.5 Kg. of rock phosphate in one metric ton. This will increase the per centage of nitrogen by 2.5 per cent. It is proposed to provide 50 per cent subsidy on the cost of rock phosphate in order to popularise it in a short span of time. The year-wise provision of Rock Phosphate is given in the following table:

Table  
Provision of Rock Phosphate

Items	YEARS					Total
	1980-81	81-82	82-83	83-84	84-85	
Rock Phosphate ( $P_2O_5$ ) in Kg.	200	400	700	800	900	3000

#### Plant Protection Programme

The Block of Khatima is having only one plant protection unit. The area served by this unit is 7386 hectars by the end of March, 1979. Since the cultivators are using hybrid varieties to a great extent the plant protection measures have to be given a proper weightage. The hybrid varieties are more prone to virus and other diseases. Hence it is very necessary that intensive plant protection measures have to be adopted so that disease free yield and seed is ensured.

The plant protection measures proposed in terms of additional area covered in hectares are given below:

Table  
Year-Wise Targets of plant protection measures  
( in ha.)

Sl. No.	Items	YEARS					Total
		1980-81	81-82	82-83	83-84	84-85	
1	2	3	4	5	6	7	8
1.	Soil Treatment	600	800	900	1100	1200	
2.	Seed Treatment	450	490	510	610	650	
3.	Intensive Control	450	490	510	610	650	
4.	Weed Control	200	220	240	260	280	
5.	Rat Control	200	220	240	280	300	

The requirement of pesticides and insecticides has been worked out in the following table:

Table  
Year-Wise Physical Targets of Plant Protection Programme

Sl. No.	Items	YEARS					Total
		1980-81	81-82	82-83	83-84	84-85	
1	2	3	4	5	6	7	8
1.	Soil Treatment (Qtls.)	120.00	160.00	180.00	220.00	240.00	920.00
2.	Intensive Plant Protection Programme						
(i)	Wheat (litres)	200.00	220.00	240.00	280.00	300.00	1260.00
(ii)	Paddy (Qtls.)	41.2	45.4	49.4	57.6	61.8	255.0
(iii)	Sugar Cane (Qtls.)	1.00	1.00	1.00	1.00	1.00	5.00
3.	Seed Treatment (Qtls.)	0.62	0.70	0.74	0.82	0.86	3.76
4.	Weedicides (Qtls.)	46.00	50.60	55.20	64.40	69.00	285.00
5.	Rodenticides (Qtls.)	121.00	133.10	145.20	157.30	169.40	620.00

The fifty per cent subsidy component being proposed for above items will be available only to tribal people.

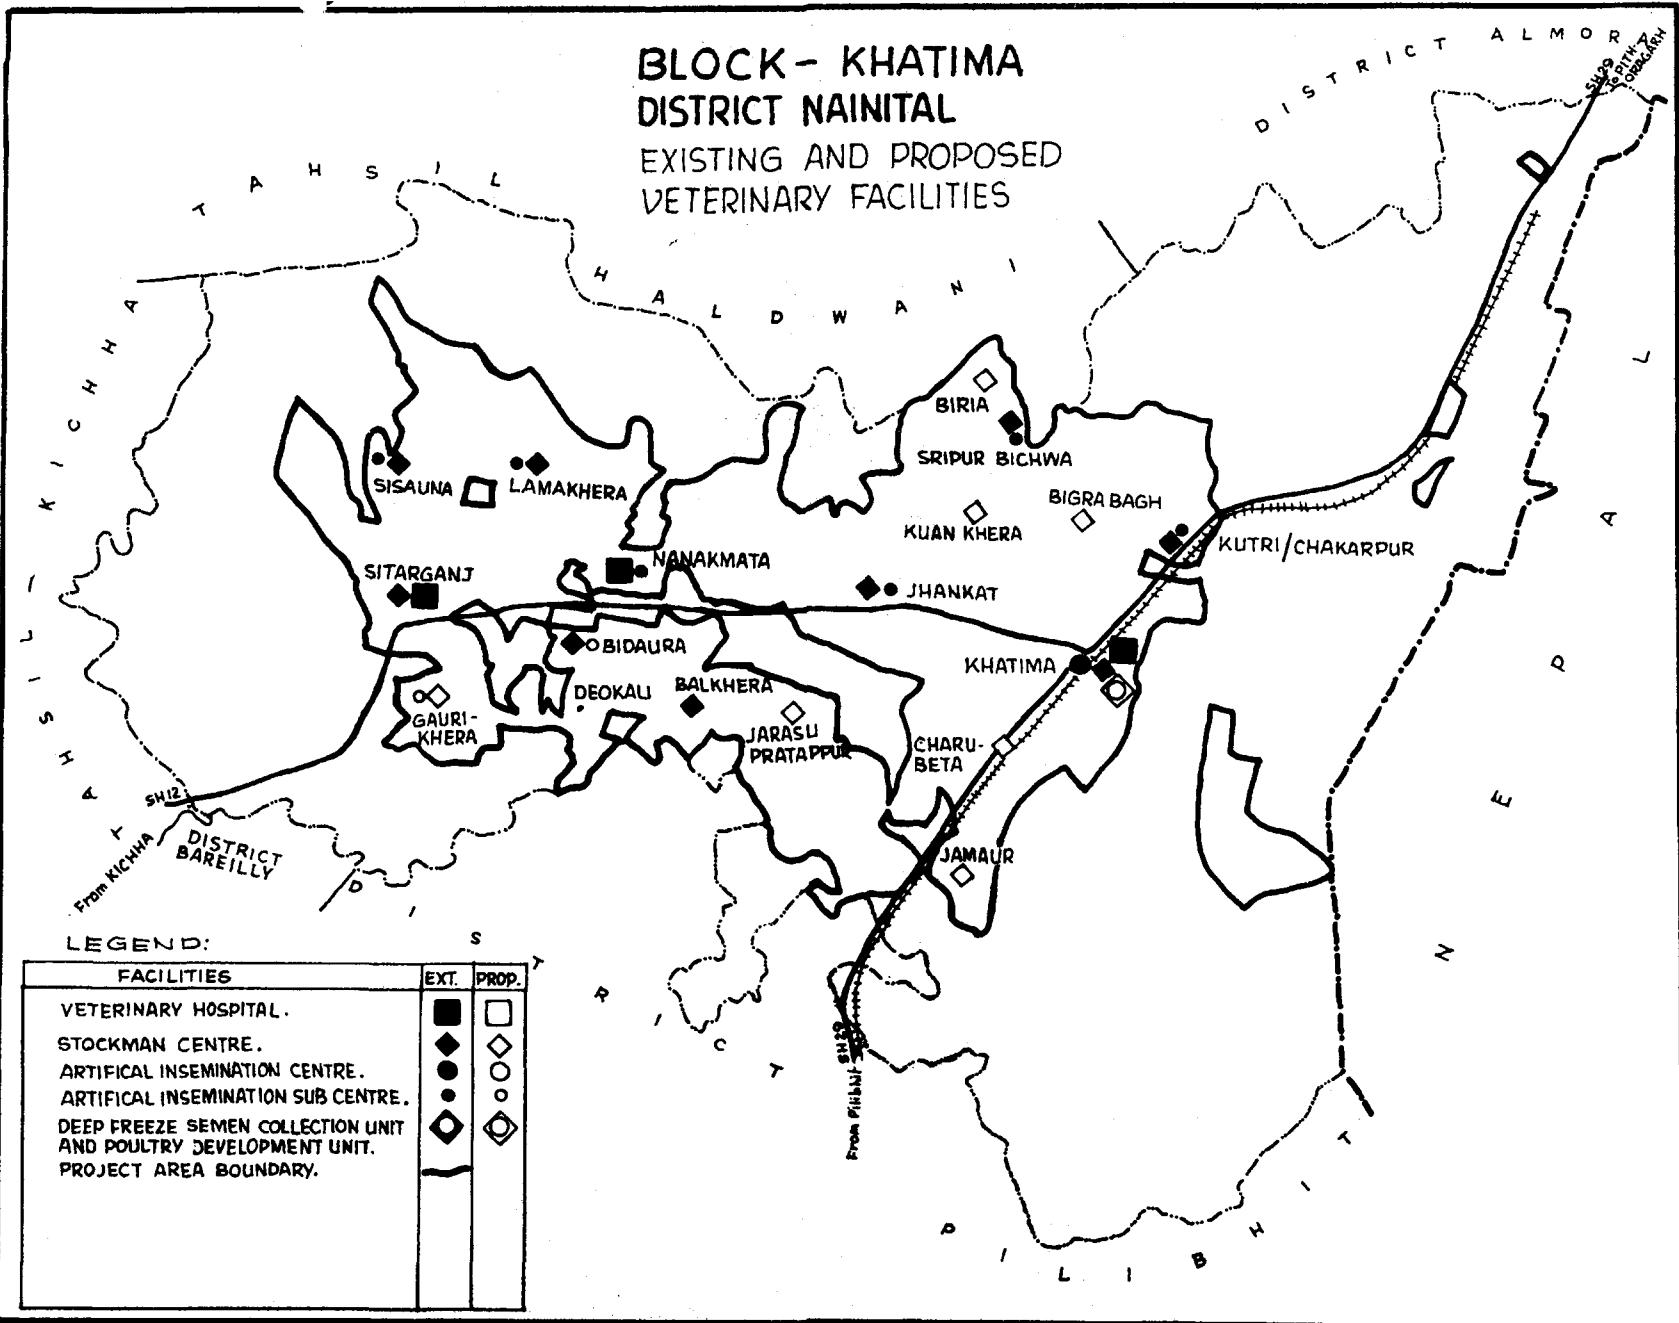

Note : BHC (10 per cent) dust @ 20 kg./ha.  
or Rs. 19.20 per ha. or Aldrin (30 EC),  
3.5 litre per ha. or Rs. 100 per ha.  
for soil treatment.

Vitrex 75 per cent @ 200 gms. per  
100 Kg. seed or per hectare, or  
Rs. 55 per hectare for feed, Strepto  
cyclene or Rs. 3.45.

#### Animal Husbandry

The small farmers can not entirely bank upon agriculture since their holdings are very small in size. So they need a supportive programme with a view to meet the minimum requirements of daily life. The programme of animal husbandry is easier to adopt because the background is already available with the tribals. They can meet the requirement of fodder either from the forest or by growing fodder on their own small lands. If organised on scientific lines and proper veterinary care is available, the animal husbandry programmes are quite profitable. As a common practice they do not milk their cows. The breed of the cows is indigenous and animals are smaller in size than a normal cow of other breeds, so they do not have enough milk. With a view/raising bullocks from these cows, they do not milk them and leave the milk for male calves. The research team while intensively visiting the area contacted many Tharus and found out that there is no religious tenets prohibiting them to milk the cow. Now the team has seen that they have no inhibition in their mind in this regard, and cows of improved breed are milked by them. A wide spread programme of shebuffalo and cow keeping has a great

BLOCK - KHATIMA  
DISTRICT NAINITAL  
EXISTING AND PROPOSED  
VETERINARY FACILITIES

potential. The market for the milk is easily available in Khetima, Sitarganj, Nanakmata and even in Pilibhit. It is proposed that 500 farmer families should maintain two she-buffaloes and one cow, cost of which is estimated at Rs. 2500 and Rs. 1000 per head respectively. The total required outlay for this programme is Rs. 30 lakh. The year-wise distribution of milch cattle along with their cost is given in the following table:

Table  
Year-Wise Distribution of Milch Cattle along  
with their cost

Sl. No.	Items	YEARS					Total
		1980-81	81-82	82-83	83-84	84-85	
1	2	3	4	5	6	7	8
<b>1. Buffaloes</b>							
	(a) Numbers	250	250	400	500	600	2000
	(b) Cost in lakh (Rs.)	6.75	6.75	10.00	12.50	15.00	50.00
<b>2. Cows</b>							
	(a) Number	250	250	400	500	600	2000
	(b) Cost in Lakhs(Rs.)	2.50	2.50	4.00	5.00	6.00	20.00

As a policy, it is suggested that, 90 per cent of the cost of milch animals is to be mobilised through either co-operative institutions or through the lead bank of the area. The animals purchased under this scheme will also have an insurance cover in order to compensate the farmers in case of death or theft of the animals."

As the tribals are fond of keeping goats which is indicated in the present status in which it has been observed that there were 2546 goats. The small animal

programme can be effectively organised, in view of the pastures and forest land available for grazing purposes. In view of a contention at Benbasa, and non-vegetarian food habits of new sikh settlers, the marketing of meat poses no problems. For sending meat and poultry to other markets, a deep freeze unit is proposed to be established at Khatima through the collaboration of a cooperative marketing society. For making this programme more profitable it is proposed that steps should be taken up to improve the breed of goats. The animal husbandry department will be involved in procuring and distributing 5 goats per family to five hundred families of agricultural labourers. For improving the breed of the existing animal 50 Barbari bucks will be distributed in the area for natural breeding purposes. These bucks will be given to youth clubs and fifty percent feed subsidy is proposed in order to maintain the health of the bucks. The remaining amount can be made good imposing a fee on those who obtain services.

This programme is very important and is supportive to the family income so it is very necessary that veterinary and insurance cover is provided. For preventive and curative activities of the different ailments. It is necessary that a stockmen centre is available at the distance of 3 Kms. or less from each villages. For this purpose 8 stockmen centres are to be established on the following places.:

1. Balkhera
2. Gauri Khora
3. Jamaur
4. Sigribagh
5. Jarasu Pretop Pur,
6. Biriya
7. Kunj Khora
8. Charubeta.

The existing stockman centres and new proposed centres are to be strengthened in order to provide services for :

1. Incubator
2. Monthly Vaccination of poultry.
3. Prevention of epidemics
4. Facilities for artificial insemination
5. Making available fodder seed
6. Making available poultry and cattle feed, and
7. Other required services.

#### Poultry Development

The poultry programme will necessarily include the distribution of improved breed chicks. These chicks and their feed will be provided on 50 per cent subsidy basis. The year-wise phasing of distribution of chicks is given below:

Items	YEARS						Total
	1980-81	81-82	82-83	83-84	84-85		
1	2	3	4	5	6	7	
1. No. of Chicks	4000	6000	8000	8000	8000	34000	
2. 2 months old @ Rs. 8/- per cost of chicks (Rs. in lakhs)		0.32	0.48	0.64	0.64	0.64	2.72
3. Medicine & Feeding utensils (Rs. in Lakhs)		0.12	0.18	0.24	0.24	0.24	1.02
4. No. of Deep Litters (100 per Unit)	40	60	80	80	80	340	
5. Cost of Housing (Rs. in lakhs)	0.80	1.20	1.60	1.60	1.60	6.80	
6. Cost of feeding	0.40	0.60	0.76	0.78	0.78	3.32	

programme can be effectively organised, in view of the pastures and forest land available for grazing purposes. In view of a confinement at Benbasa, and non-vegetarian food habits of new sikh settlers, the marketing of meat poses no problems. For sending meat and poultry to other markets, a deep freeze unit is proposed to be established at Khatima through the collaboration of a cooperative marketing society. For making this programme more profitable it is proposed that steps should be taken up to improve the breed of goats. The animal husbandry department will be involved in procuring and distributing 5 goats per family to five hundred families of agricultural labourers. For improving the breed of the existing animal 50 Barberi bucks will be distributed in the area for natural breeding purposes. These bucks will be given to youth clubs and fifty percent feed subsidy is proposed in order to maintain the health of the bucks. The remaining amount can be made good imposing a fee on those who obtain services.

This programme is very important and is supportive to the family income so it is very necessary that veterinary and insurance cover is provided. For preventive and curative activities of the different ailments. It is necessary that a stockmen centre is available at the distance of 3 Kms. or less from each villages. For this purpose 8 stockmen centres are to be established on the following places.:

1. Balkhera
2. Gauri Khera
3. Jamarur
4. Bigrabagh
5. Darasu Pratap Pur,
6. Biriya
7. Kunj Khera
8. Charubeta.

The existing stockman centres and new proposed centres are to be strengthened in order to provide services for :

1. Incubator
2. Monthly Vaccination of poultry.
3. Prevention of epidemics
4. Facilities for artificial insemination
5. Making available fodder seed
6. Making available poultry and cattle feed, and
7. Other required services.

Poultry Development

The poultry programme will necessarily include the distribution of improved breed chicks. These chicks and their feed will be provided on 50 per cent subsidy basis. The year-wise phasing of distribution of chicks is given below:

Items	YEARS					Total
	1980-81	81-82	82-83	83-84	84-85	
1	2	3	4	5	6	7
1. No. of Chicks	4000	6000	8000	8000	8000	34000
2. 2 months old @ Rs. 8/- per cost of chicks (Rs. in lakhs)		0.32	0.48	0.64	0.64	2.72
3. Medicine & Feeding utensils (Rs. in Lakhs)		0.12	0.18	0.24	0.24	1.02
4. No. of Deep Litters (100 per Unit)	40	60	80	80	80	340
5. Cost of Housing (Rs. in lakhs)	0.80	1.20	1.60	1.60	1.60	6.80
6. Cost of feeding	0.40	0.60	0.76	0.78	0.78	3.32

Annual Feed of Poultry Required

(in Qts.)

YEAR				
1980-81	81-82	82-83	83-84	84-85
160	390	520	520	520

It is also estimated that 130 to 260 Qtls. of poultry feed will be required annually for giving a boost to the poultry programme. It is proposed to establish 3 Govt. poultry farm located at the following places :

1. Bhur ( Near Khatima )
2. Charubeta
3. Sitarganj

These farms will provide an impetus to the poultry keepers for adoptions of this programme on domestic as well as commercial use. There is no problem of supply of eggs and chickens since this area is well connected with Banbasa, cantonment, district, of Pilibhit, Sitarganj, Nanakmata and Kiccha on the other. If the supply of these commodities need some more transportation facilities, Khatima is well connected with Lucknow. The capital of Uttar Pradesh where a huge market is available.

Pisciculture

In the background of Sharda Sager, Nanak Sagar and other lakes and ponds, the importance of fisheries programme has attained a great scope. The project area has 10.5 hectares of surface water spread

over in eleven villages. The names of these village along with the water area is given below:

Name of the village	Water area in hectares
1. Jadavpur	1.60
2. Nauser	1.20
3. Karhatia	0.40
4. Banusa	0.40
5. Khetal Sonda Mustaja	0.40
6. Biria	0.40 +0.40
7. Sisauna	0.60
8. Sitarganj	0.40
9. Pratap Pur	2.50 +1.50
10. Ratanpur	0.40
11. Nanakmata	0.30
TOTAL	10.50

These ponds are of natural origin, and for scientific pisciculture they will need primarily three things i.e. (i) construction of escapes (ii) ensuring perennial water supply and (iii) availability of fingerlings. It is estimated that construction of escapes per hectare of water area entails an expenditure of Rs. 9523.80. Thus a total sum of Rs. 1.00 lakh will be required.

The water required for these tanks will be taken from private/government tubewells on custom charges.

The requirement of fingerlings can easily be fulfilled from Sharda Sagar where a batch of workers of Fisheries Department headed by an Assistant Director is stationed. The production of fishes at a large scale can be doubly utilized. Firstly by raising

domestic consumption of nutritious articles and secondly supplementing the family income by selling the fish.

All these eleven tanks are proposed to be adopted by the block. First of all these ponds will be cleared off from the existing fish, so that no damage is done to the fingerlings proposed to be dropped. For efficient functioning of this programme a Fisheries Inspector is proposed to be posted to supervise these tanks. A watchman on each pond is also proposed to lookafter the pond and provide feed to the fishes. This watchman will be taken from amongst the Tharus of these villages. Rs. 100 per month will be given to these watchmen. It is estimated that 52500 fingerlings will be dropped in these ponds costing about Rs. 2200/-

For scientific pisciculture direct and indirect feeding to fingerlings is to be done. Six cart loads of cawdung amounting to Rs. 120/- per year will be dropped in one hectare of water area costing about Rs. 1260 in all the selected ponds of the area. Oil cakes can also be provided for the feeding of these fingerlings. Keeping 50 per cent of mortality in view after the expiry of two years 40,000 Kgs. of fish production is estimated. At present rates of Rs. 6/- per kg. the total value of the produce is estimated at Rs. 12.40 lakhs.

The Research Team visited many places inhabited by the Tharus and contacted many Tharu leaders and found that there were many rivulates and Nalas along with one village's pond where these tharus go for fishing. In view of the above observations it is proposed to establish two fishermen cooperative societies in the project area to fulfil the needs of the fishermen. In these societies facilities will be available to fishermen to raise loan for boats & nets etc. The marketing facilities of the 'catch' of these fishermen is proposed to be

organised through these societies. These societies will substitute the middle men who earn huge profits in return of small labour. Thus it will directly benefit the Tharu population of the area.

### Irrigation

Irrigation facilities and use of chemical fertilizers alongwith H.Y.V. seeds go hand in hand. There seems to be no need to emphasise the role of irrigation in stepping up of food and fodder production. But the data of the project area has unique characteristics and is quite dissimiler to the data of the State, in the sense that percentage of area under H.Y.V. is higher than the State average but net irrigated area to the net area sown is lower if compared with the State. The factors responsible for such vide variations may be higher rainfall, greater moisture retaining capacity of the soil and shallow water table of the area.

The project area has only about 31.5 per cent irrigated area to the net area sown. Since this percentage is lower than the state average a greater emphasis has to be laid down on increasing the irrigation potential. Minor Irrigation provides the most important input of assured irrigation for cultivation of H.Y.V. for increasing the intensity of cropping and for general increase in productivity of different crops in areas served by them. It is obvious from the table 12 chapter 3 that almost all the area irrigated by different sources is covered by private sources; Only 13.27 per cent area is irrigated by canal, which is meagre. There are 3 Govt. tubewells in Khetima block but none of them is functioning . From the above discussion it is very much clear that Govt. minor irrigation sources are nil in the area. In this way highest emphasis will have to be placed for State/Private minor irrigation works so that assured irrigation can be provided for boosting the agricultural production and further provide a base for increase in multiple cropping. In

in order to increase the irrigation potential of the project area, the following villagewise private minor irrigation works are being proposed:

Sl. No.	Name of village	No. of Pumpsets	Private Tubewell's	Irrigation Potential created (in ha.)	
1	2	3	4	5	6
1.	Khatima	2	-	1	15

130.	Bhajanpur	5	-	1	30
<b>TOTAL</b>		<b>1320</b>	<b>335</b>	<b>215</b>	<b>9350</b>

Thus, 1320 electric pumpsets, 335 diesel pumpsets and 215 electric tubewells have been proposed creating an additional irrigation potential of 9350 hectares.

The State minor irrigation works in shape of 5 State tube-wells are being proposed for the project area. The location of these State,tube-wells will be decided by the block authority with the consultation of minor irrigation specialist available at block level.

These State tube-wells will create an additional irrigation potential of 800 hectares.

This will cater almost all the irrigational needs of the area. It needs to be mentioned that this area is tarai area of the foot hills of Kumaun. The hills cause the rains in this area in more frequent numbers. So the rain-fed crops do get the natural water required for the growth of the crop.

#### Cooperation

Cooperation has been instrumental in promoting the development of not only agriculture,dairying & pisciculture but also cottage industries throughout the world. In India it has particularly helped the agriculturists by reducing their dependance on money lenders for finance needed for the various agricultural activities. Cooperation can be defined as a mode of working where all the members share common responsibilities and liabilities with a common objective. There are different types of cooperative societies with different motives. Their multi-farious activities led to the birth of multi purpose cooperative societies. In fact, cooperation is the main pillar of strength in the rural areas of India where almost all the economic activities rotate around it.

100-42-1

As already stated in chapter -3, out of 7129 tribal families in the project area 3956 tribal families were the members of cooperative societies. It is proposed that remaining 3173 families will be brought under the cooperative fold during the next five year. The year-wise proposed enrolment of tribal families is given in the following table.

Table  
Yearwise Proposed Enrollment

Sl. No.	Name of Societies	YEARS					Total
		1980-81	81-82	82-83	83-84	84-85	
1	2	3	4	5	6	7	8
1.	Khatima(South)	85	85	85	85	86	426
2.	Khatima (North)	110	135	135	162	195	752

<b>TOTAL</b>		<b>68.50</b>	<b>89.50</b>	<b>118.50</b>	<b>144.00</b>	<b>172.00</b>

Out of these 7 LAMPS, 3 (Khatima North), Khatima (South), and Nanakmata are having their own godowns. For the remaining 4 LAMPS, a scheme of construction of godowns has been sanctioned by the cooperative deptt. with the financial help of World Bank. These godowns will be constructed at Siterganj, Jhenkai, Bigrabagh & Kanchanpuri (Bhilaya).

These godowns will be utilised to store and distribute consumer goods at fair prices. Other agricultural inputs like seed, fertilizer etc. will also be available at these centres. For efficient functioning these societies shall be linked with a lead society of Khatima. This will ensure sufficient and regular supply of articles on demand. It is estimated that each society will have a business of about 2 Lakh Rs. per year. The following table provides the yearwise break up of requirement of Govt. subsidies.

Table  
Requirement of Govt. Loan and Subsidies

(Rs. in 000's)

Sl. No.	Items	Yearwise break up				
		1980-81	81-82	82-83	83-84	84-85
1	2	3	4	5	6	7
1.	Managerial Subsidy	25.20	25.20	25.20	25.20	25.20
2.	Risk fund for tribals (10% of total loan)	387.50	397.75	407.50	422.25	437.70
3.	Difference of interest between societies & bank 2%	77.50	79.55	81.50	84.45	87.55
4.	1% compensation for losses due to price fluctuation	7.00	7.00	7.00	7.00	7.00
5.	Non recurring subsidy	7.00	7.00	7.00	7.00	7.00
6.	Subsidy for transport	7.00	7.00	7.00	7.00	7.00
	TOTAL	511.20	523.50	535.20	552.90	571.50

With a view to provide guidance in organising rapid-repaid-development programmes mainly suited to tribal a branch of District Cooperative Development Federation (DCDF) is proposed to be established at Khatima. The Government subsidy and grants to these LAMPS is proposed to be rented through the officers of the cooperative development in order to avoid wastage and misutilisation.

#### Power/Electricity

Transportation net work and the availability of power supply are two major factors responsible for major break through for rural development. The analysis of the existing data is revealing. There are many villages having the facilities of pucca road and electricity but they have failed to develop. It is possible that some subdued factors may be responsible for reaching these facilities to these villages where no other function exists. Because of a huge power house besides, Khatima a number of villages could get the power supply, which is being mainly used for running private tubewells. These facilities are to be exploited to the fullest of their use while planning for spatial and sectoral programmes.

About 58.5 per cent i.e. 79 villages are electrified. The names of these villages are given below :

1. Ratenpur
2. Fulaiya
3. Banusi
4. Phenian
5. Gongi
6. Deuri
7. Jhankat
8. Sarasariya
9. Banusa

48. Jhankaiyan
49. Kishanpur
50. Bihi
51. Nagla
52. Chandpur
53. Dohari
54. Seijna
55. Jogither Nagla
56. Seijni

The year-wise phasing of the villages to be electrified are given below:

Table  
Yearwise phasing of electrification of villages

<u>Sl. No.</u>	<u>Year</u>	<u>Number of village</u>
1.	1980-81	10
2.	1981-82	10
3.	1982-83	12
4.	1983-84	12
5.	1984-85	12

---

However, since the project-area has already attained the norms as formulated in R.M.N.P. but because this is a special plan for tribals it is proposed that all the tribal villages will be electrified by the end of 1984-85.

#### Industries

For promoting the existence of the present units it is necessary to make arrangements for training facilities. It is proposed to establish four training cum-production centres situated at places mentioned below:

1. Khatima
2. Nanakmata
3. Sitarganj
4. Jhankat

Through these centres training will be imparted in different trades like wood-craft, carpentry, black-smithy, tailoring, basket and mat making.

In the tribal area there is no group effort so far as cottage industries are concerned. The observation made by the research team has revealed that following types of raw materials are available :

1. Bamboo
2. Paddy Straw
3. Paddy husks
4. Bagasse
5. Lime-stone

The tharus usually inherit the skills in weaving of mats, making of baskets, weaving of fishing nets, tailoring and carpentry. If some training programmes are organised to train these people for

further refinement in design and shape of mats, baskets and tailoring, there is a wide scope of considerable cash returns. These cottage industries have full scope to flourish in the following settlements:

1. Khatime
2. Sitarganj
3. Kutri/Chakarpur
4. Jameur
5. Lamakheda
6. Balkhera
7. Bidaura
8. Gouri Khera
9. Sripurbichhua
10. Chandeli
11. Jhankat
12. Jaresuprntappur
13. Nanakmata
14. Sisauna
15. Naugawanath
16. Biria
17. Bigrabagh
18. Bhurakishni
19. Umru Khurd
20. Kula-Kheda
21. Uldan
22. Charubeta
23. Bhagchuri
24. Sunkheri Kalan
25. Deokali
26. Sedhunager.

The basket making art is very fine in this area and the baskets made by the tharus can even be kept as decorative pieces in the drawing rooms of the people. If some training is imparted to them they can make struc-

hats and beautiful shoulder bags. These fine articles can find a market in the large urban centres, through the already available net work of U.P. Handicrafts. The units of straw articles and basket making are proposed to be located at the following places :

Table

Sl. No.	Name of Industry	No. of Units	Places	Proposed employment (No. of persons)
1	2	3	4	5
1.	Straw Hats	5	Jhankat, Lama-Khera, Bidaura, Sripurbichwa	20
2.	Straw Shoulder Bags	5	Sisauna, Jamur, Jerasu Pratappur, Nanakmata	20
3.	Basket Making	10	Jamaur, Jhankat, Jerasu Pratappur, Sripur-bichwa, Bidaura, Nanakmata, Naugawanath, Bigrabag, Kua-Khera.	

In the vicinity of Khatima block, lime stone boulders are available at Tanakpur in abundance. These boulders can be fruitfully utilised for production of lime through burning process. The lime industry can be established at Khatima. The estimated cost of one unit ranges between Rs. 30 to 50 thousand. It is proposed that such a unit will be run under the cooperative sector.

Hand made card board units have a possibility to be established in view of the availability of bagasse,

paddy straw and paddy husk. The training cum-production work-shops will provide training of hand made paper and card board for promoting the establishment of these units. A field visit of leaders will be organised to visit Kalpi and have a direct experience there. These units can be provided at the following places:

Table

Sl. No.	Industry	No. of Units	Places	Proposed employment
1	2	3	4	5
1.	Card Board Industry	2	Khatima	10
		3	Nanakmata	15
		2	Kutri/ Chakarpur	10
		1	Jarasu Pratap pur	5
		2.	Sisauna	5

The programmes related to Khadi and Gram Udyog Board are also being proposed.

#### (I) Hand Pounding Units

These units will process rice. The hand pounded rice contains more of Vitamins which is present in the outer surface of the rice. This outer surface of rice is scrapped in rice mills and hullers. The hand pounding is commonly in practice in this area and the tharus like the hand-pounded

rice. The hand pounding units are proposed to be established at the following places :

Sl. No.	Places	No. of Unit	Proposed employment
1	2	3	4
1.	Jemaur	5	15
2.	Kutri/Chakar pur	5	15
3.	Lemakhera	2	6
4.	Balkhera	2	6
5.	Bidaura	3	9
6.	Sri Pur- bichwa	2	6
7.	Chandeli	2	5
8.	Jhankat	5	15
9.	Pratap Pur	3	9
10.	Nanakmata	5	15
11.	Sisauna	5	15
12.	Naugawanath	2	6
13.	Biriya	2	6
14.	Bigrabagh	2	6
15.	Umrukurd	2	6
16.	Kuakhera	3	9
17.	Charubeta	3	9
18.	Uldan	2	6
19.	Bhagchuri	2	6
20.	Deokali	2	6
21.	Sadhunagar	2	6
22.	Sunkhari Kalan	2	6
TOTAL		63	189

(II) Hand Made Soap

The living habits of tharus are changing and they are now using soap to clean their clothes. The Khadi board provides technical knowledge and revolving funds also for making soap. There is no problem of marketing of this produced soap which can find a way in local tharu markets or a wide-net work of Khadi Gram Udyog Board sale Depot can handle this job. These units will be established at the following places:

Sl.No.	Place	Unit	Persons engaged
1	2	3	4
1.	Kutri/Chakarpur	3	6
2.	Jamour	2	4
3.	Lamakhera	2	4
4.	Balkhera	2	4
5.	Bidaura	2	4
6.	Gauri Khera	2	4
7.	Sripur Bichwa	3	6
8.	Jhankat	3	6
9.	Pratappur	3	6
10.	Nanakmata	2	4

(III) Match Box Unit

This unit is proposed for the tribal areas keeping inview the requirement of wood which is available in large quantities. A very large unit of match box is functioning at Bareilly but that would not affect this proposed match box unit. The tribal will surely use a thing produced by their own people. A Khadi Gram Udyog Board Unit can be established at an initial cost of Rs. 10,000. A fifty percent subsidy grant will be made available

to this unit. There are a number of progressive Tharu families who will come forward for establishing this Unit.

(IV) Carpentry

The forest is producing a large quantity of wood which can be utilised gainfully for productive purposes in the shape of furniture. These units can easily be established at the following places. Their Training may also be organised in the proposed training cum-production centres:

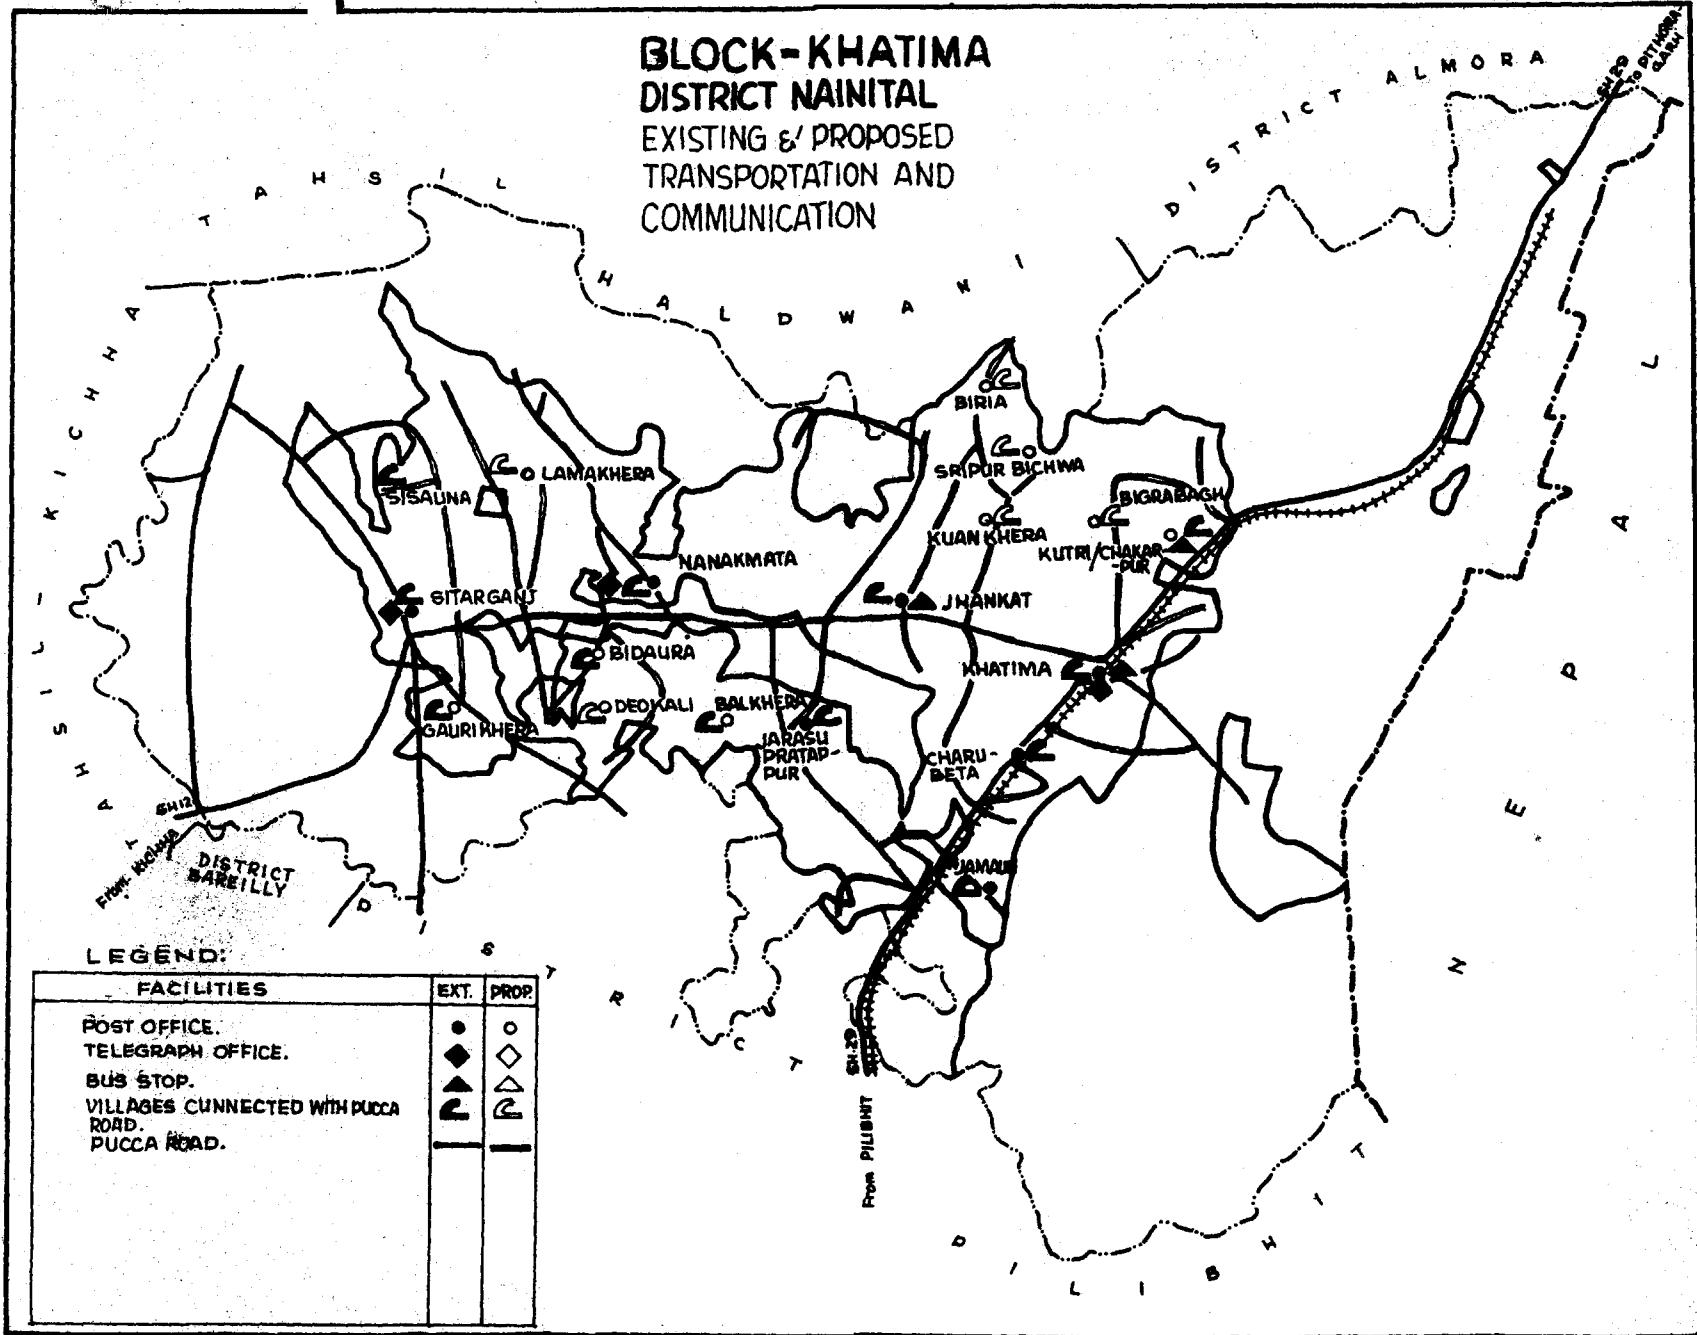

1. Khatima
2. Kutri/Chakprpur
3. Jamour
4. Lamakhera
5. Balkhera
6. Bidaura
7. Gaurikhera
8. Sriour bichwa
9. Chandeli
10. Jhankat
11. Pratappur
12. Nanakmata
13. Sisauna
14. Naugawanath
15. Biriya
16. Bigrabagh
17. Bhura Kishni
18. Umarukhurd
19. Kuakheda
20. Uldan
21. Charubeta
22. Bhagchuri

Roads

A good net-work of roads is essential for proper and adequate exploitation of natural and other resources of the area and for enabling the produce to procure requisite inputs and carry produce to markets. The area is deficient so far as the road facility is concerned. The main roads connecting some of the villages are Tanek Pur Pilibhit road via Khatima, Khatima Sitarganj road & Khatima Puranpur road. Being the Tarai area majority of villages are water logged and the communication of these villages are almost disturbed. While proposing for new road construction the National norms under minimum needs programme have been considered. The following roads have been proposed in order of priority:

Sl. No.	Name of Road	Distance in Kms.	Cost in Lakh Rs.
1	2	3	4
1.	Pahenian to Sripur Bichwa road via Bhura Kishni & Kuan Khera	10.0	12.20
2.	Khatima to Kutri road via Kanjabagh and Bigrabagh	7.0	8.40
3.	Bhurā Kishnī to Majhola via Bankatia and Biria	7.0	8.40
4.	Garasariya to Gangi road via Fulaiya Ratanpur & Uldan	7.0	8.40
5.	Sarunja to Khalasi Road	3.5	4.20
6.	Dohara Magarsara Road	3.0	3.60
7.	Sunkhari Kalan to Bichai via Barki Dandi, Kaithulia, Tikuri & Bichwa	6.5	7.80
8.	Ainchta to Gangi via Bihi Nai-basti, Khassibagh	6.0	7.20
9.	Charubeta to Bari Anjania via Chanda	4.0	4.80

BLOCK-KHATIMA  
DISTRICT NAINITAL  
EXISTING & PROPOSED  
TRANSPORTATION AND  
COMMUNICATION

Sl. No.	Name of Road	Distance in Kms.	Cost in Lakh Rs.
1	2	3	4
10.	Sitarganj to Chandeli via Kumrah & Gurkhura	6.0	7.20
11.	Banuse to Jhankat Pucca Road	4.0	4.80
12.	Sarasaria to Pratap Pur	3.0	3.60
13.	Nauser to Ulani via Kutra and Mohanpur	2.5	3.00
14.	Kanchnouri (Pachpara) to Jedor-Pur via Karbala	4.0	4.80
15.	Jamaur to Jamaur	2.0	2.40
16.	Jamaur to Bendia Tharu	2.0	2.40
17.	Saijani to Pindari	2.0	2.40
18.	Pachpara to Matiha via Devri & Khempur	6.0	7.20
19.	Pachpara to Sunkharikalan via Jhankat	4.0	4.80
20.	Dohara to Salmata	4.0	4.80
21.	Baghaura to Bijti via Karghatia	4.0	4.80
22.	Khatima, Sitarganj Motarmarg to Nakulia via Turka Tisaur & Tharu Tisaur	5.0	6.00
<b>TOTAL</b>		<b>102.5</b>	<b>122.40</b>

The following roads are sanctioned by different Deptts.

1.	Jhankat to Majhola via Saveura Deuri & Biriya	BY P.W.D.	7.0	7.00
2.	Mundeli to Jhankaiya via Unchi Mahuwat	"	5.0	5.00
3.	Sitarganj to Nakulia	"	8.0	15.00
4.	Sisai Khera to Sadhunagar	"	12.0	20.00
5.	Sitarganj to Sadhunagar	"	12.0	15.00
6.	Chakarpur to Khetal Sanda Mustaza via Bigrabagh	"	9.0	13.00
7.	Khatima, Tanakpur Motarmarg to Bhurai (Mandi Samiti )		1.0	1.00
<b>TOTAL</b>			<b>54.0</b>	<b>76.00</b>

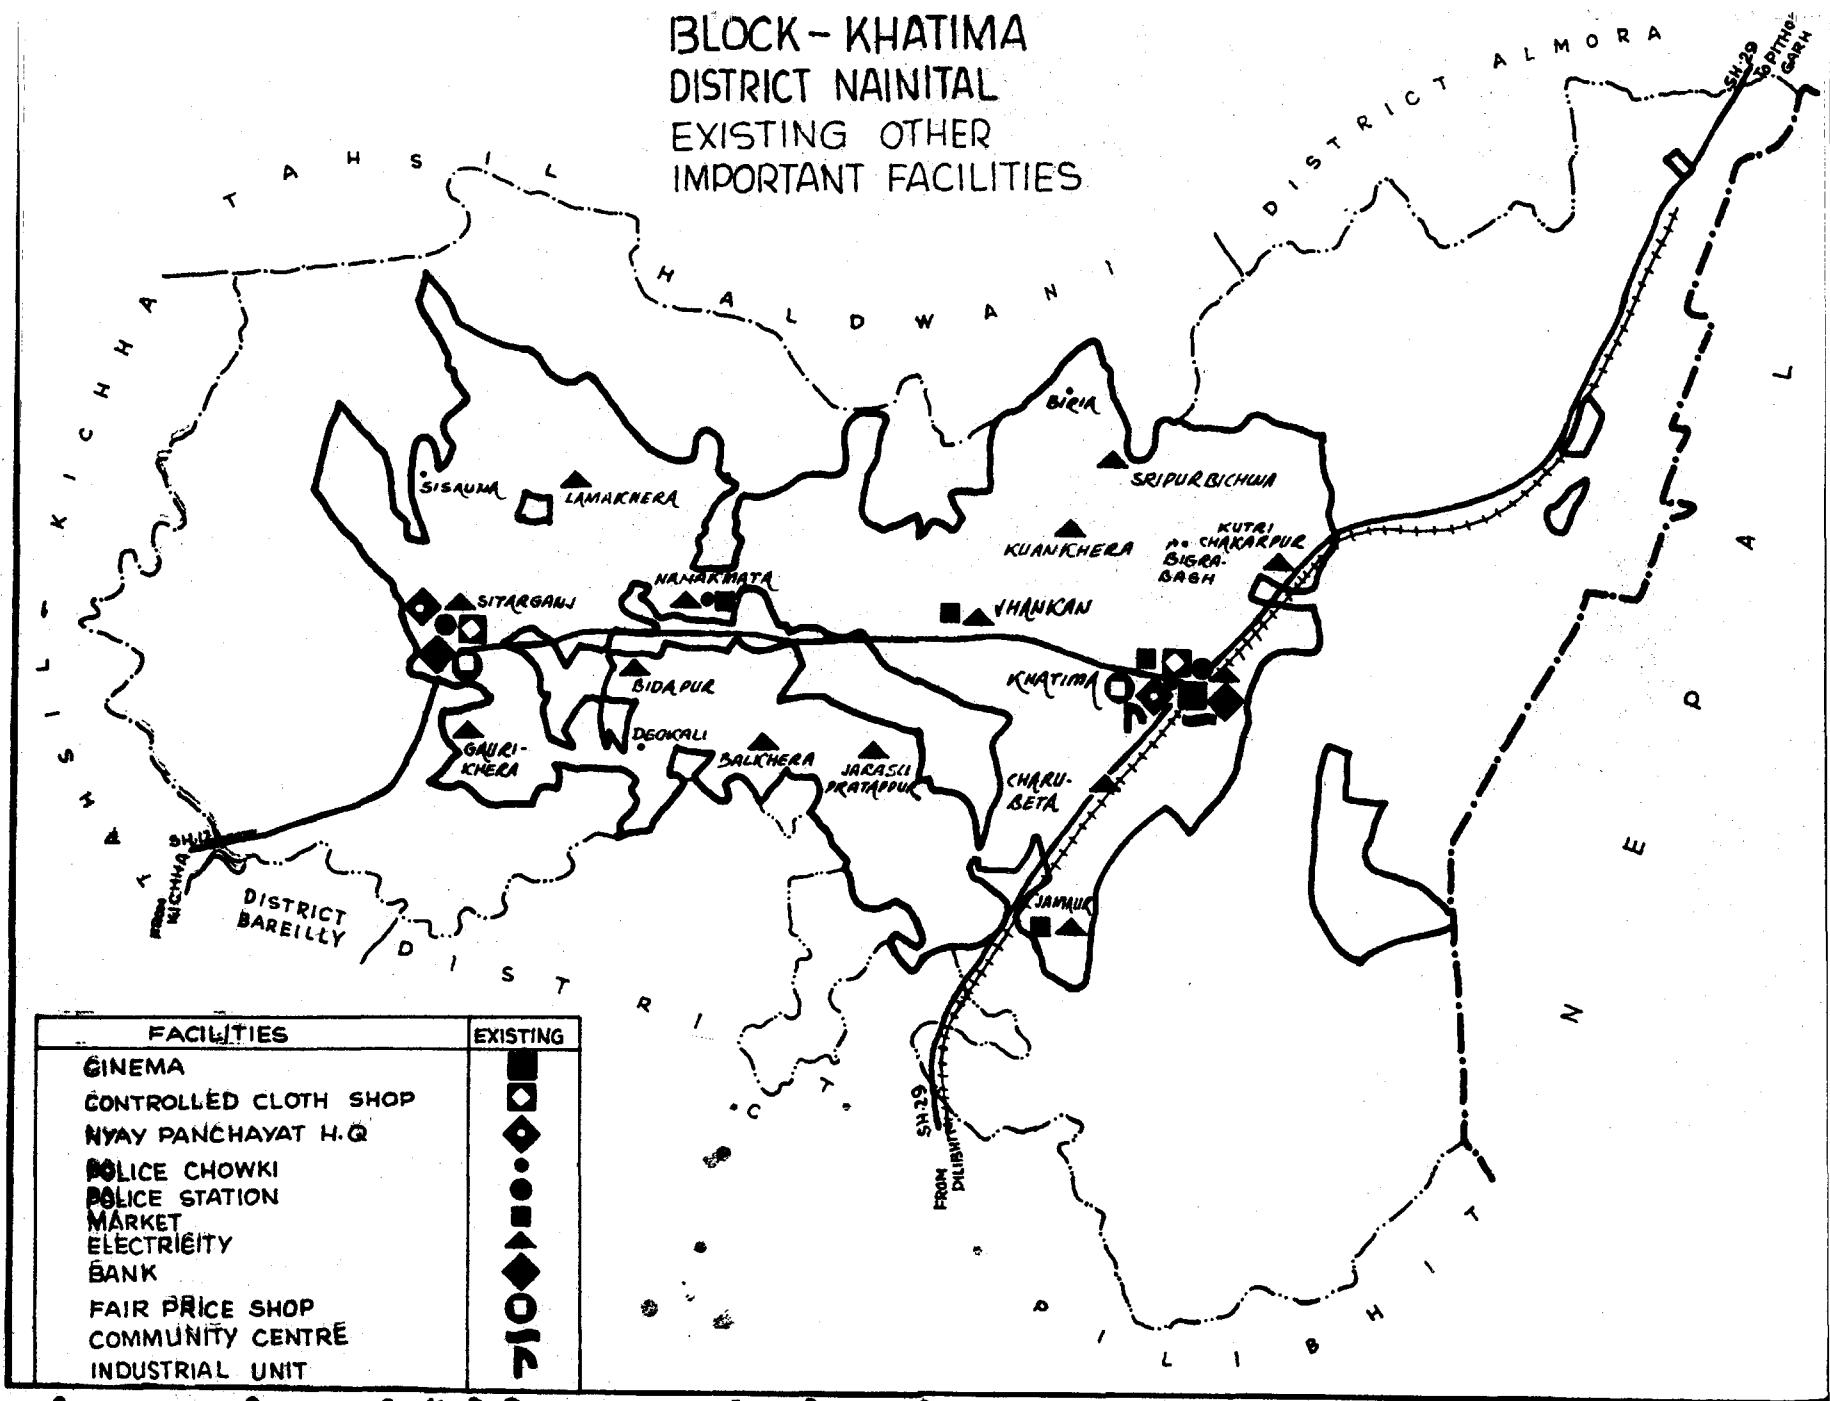

The proposed and sanctioned roads will connect all the villages of the project area. The total road length to be constructed is about 102.5 Kms. The estimated outlay required for construction of the above proposed road is about Rs. 122.40 lakhs including the cost of culverts which will have to be constructed along with it.

Many Tharu villages were not having even Kharanja roads in their villages. The team observed that the position of the villages roads becomes very bad during rainy season. It is difficult to pass on these roads owing to mud and water. The transportation of essential articles also becomes very difficult. Therefore, it is proposed that Kharanja will be laid down in Fifty villages. All the focal units identified for the area development will be provided with this facility where even it would be found necessary. The cost of laying this kharanja could be about Rs. 20,000 per village to falling to Rs. 26.00 lakhs.

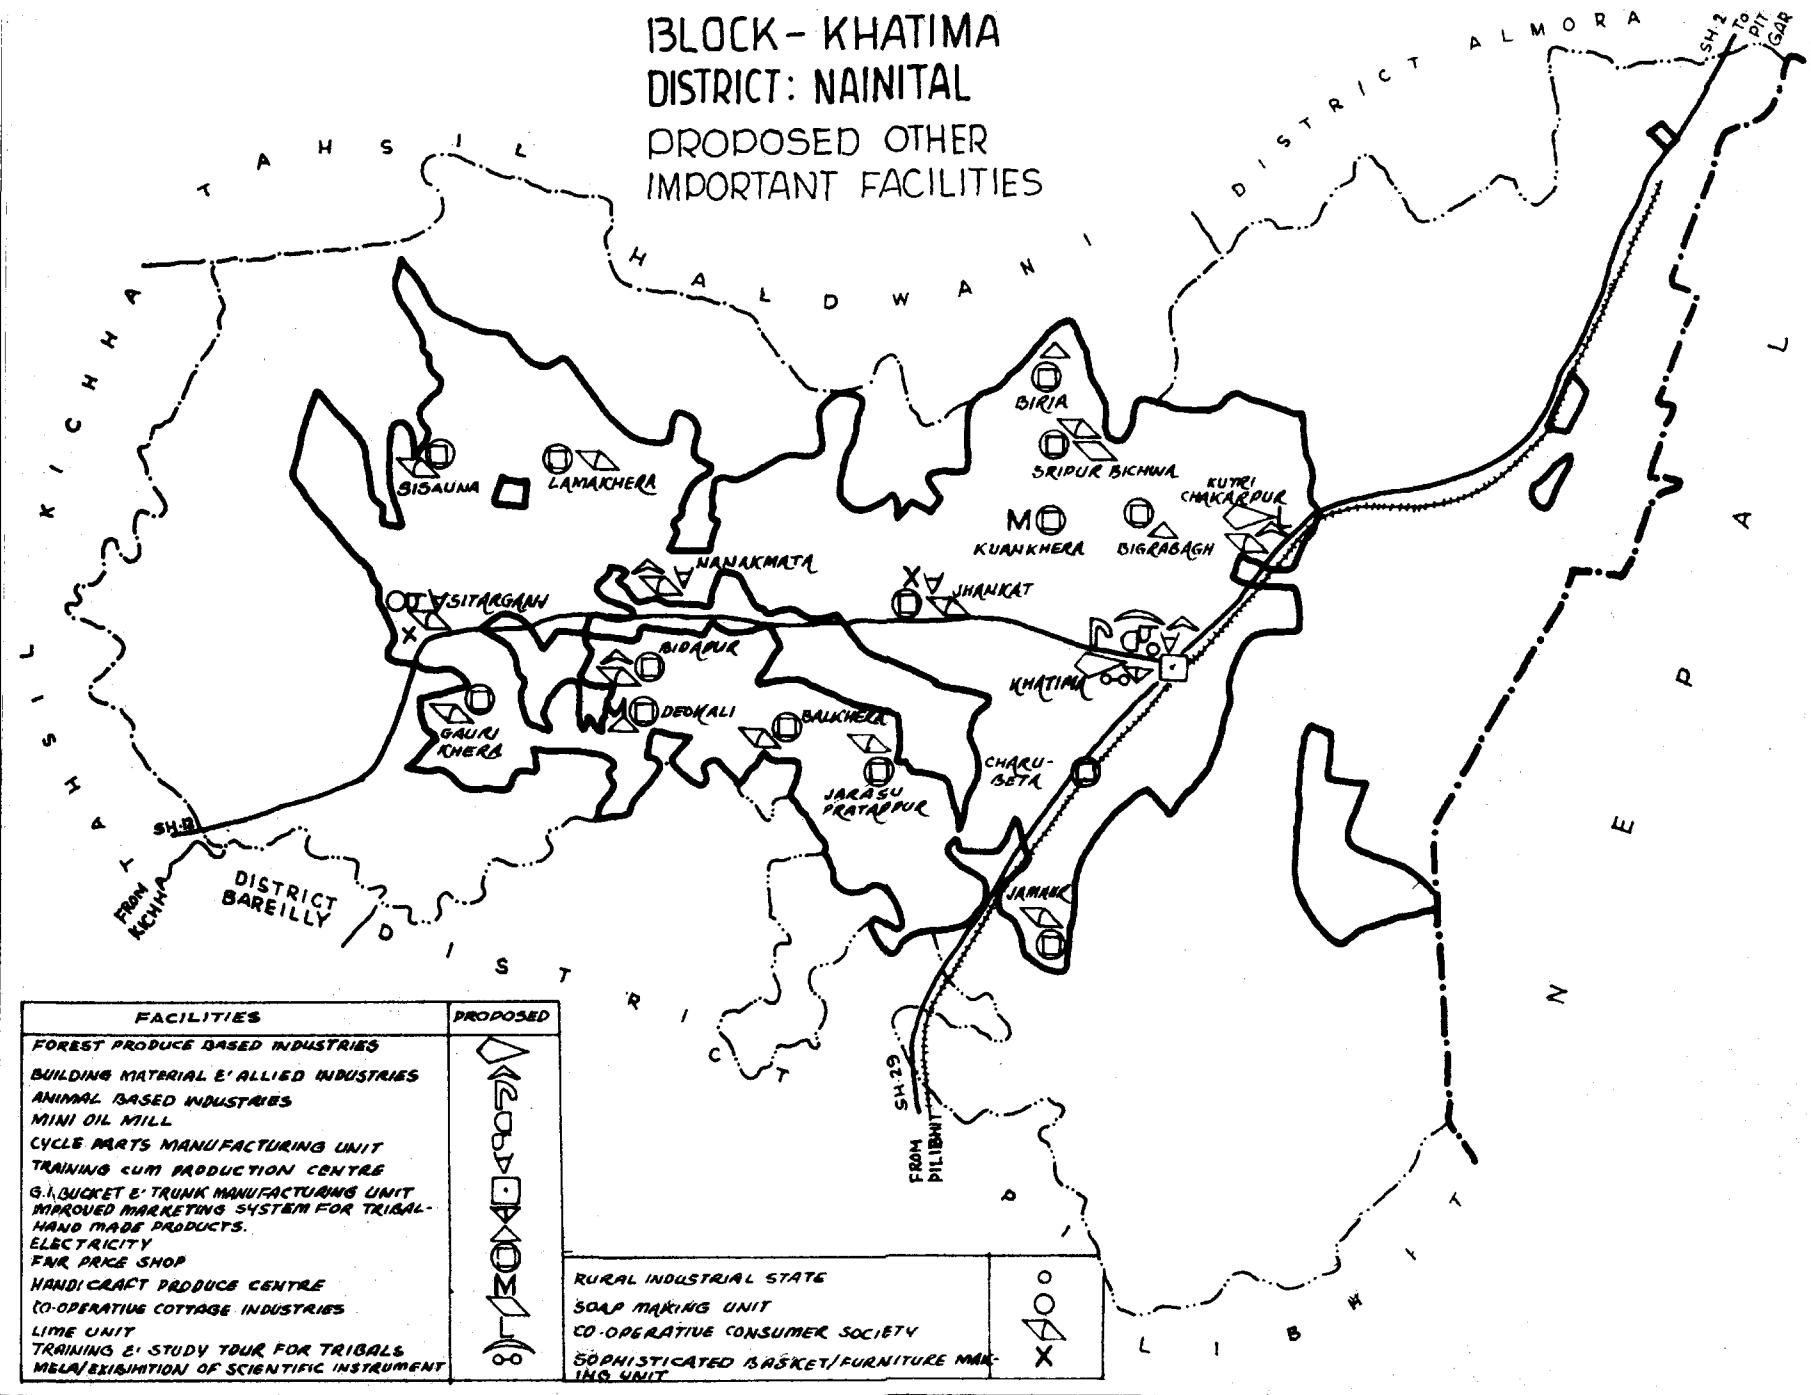

#### Education

The importance of education needs no elaboration. But this area being tribal these people lack aspirations. The aspirations are the main motivating force to strive for achieving better economic standard. The history of these people shows that they were original resident of Rajasthan and have fled to take shelter in the forests to keep themselves away from Mughal torture. So they were satisfied only with small meals and scanty clothes. Since they were afraid of Mughal and British influence, they tried to hide themselves and made themselves aloof from the other societies. They were even unaware of the Independence of the country and about the overthrow of British rule.

# BLOCK-KHATIMA

## DISTRICT NAINITAL

EXISTING & PROPOSED  
EDUCATIONAL FACILITIES

In view of the above fact they need more of education to inculcate a feeling of self help and for the betterment of their living standards. With this instrument i.e. education they can share the modern ideas through the different communication channels viz. papers, magazines of different types and also radio etc.

### Junior Basic Schools

Though the project area is having a large number of Junior Basic Schools, to be specific, 67 villages out of 135 villages are having a Junior Basic School but the minimum needs programme envisages that each village should have a JBS at a distance of not more than 1.5 km. Keeping this norm in view there are only twenty five deficient villages, where a Junior Basic School does not exist. The names of the villages along with their distances are given in the following table:

Table

Villages where a J.B.S. is beyond 1.5 Km.

Sr. No.	Name of Villages	Distance
1	2	3
1.	Ainchta	6
2.	Debipura	6
3.	Bihi	5
4.	Bhuriya Deshi	2
5.	Karghatiya	2
6.	Gauri Khera	2
7.	Goharpatia	2
8.	Kutri	2
9.	Khatal Senda Mustaza	2
10.	Chhinki	2
11.	Bankatiya	2
12.	Bhuriya Tharu	2

1	2	3
13.	Devri	2
14.	Etwa	2
15.	Khempur	2
16.	Navi Nagar	2
17.	Sundarpur	2
18.	Kisanpur	2
19.	Jhankaiya	2
20.	Gauskudan	2
21.	Bhuria	2
22.	Chanda	2
23.	Umru Khurd	2
24.	Tikuri	2
25.	Dhyen Pur	2

These villages have been arranged according to their distances which are in descending order. Thus it is clear that this list is also a priority list. Priority should be given to those villages where the Junior Basic School is located at the longest distance.

#### Senior Basic Schools

There are 15 Senior Basic Schools functioning in the area. By considering the RMNP requirement 59 villages will need this facility to gainfully engage the boys passing out from Junior Basic Schools. An exercise has been done to locate the place where Senior Basic School need to be opened taking into account the distance criterie, the following picture has emerged. The following table shows the settlements

along with the distances from the existing Senior Basic Schools:

Table  
Villages having Senior Basic Schools at a  
distance mentioned against them

Sr. No.	Name of Villages	Distance (in Kms.)

56.	Bisauta	3
57.	Uldan	3
58.	Gurkhura	3
59.	Nausar	3

Since the number of Senior Basic Schools required for the area is 59 a yearwise phasing of proposals is given in the following table:

Table  
Year-Wise Phasing of S.B.S. According to Priority

Year	Number	Name of villages
1	2	3
1980-81	6	Khetal Sanda Mustaza, Sripur-bichwa, Kunwa Khera, Ainchta, Debipura, Tikuri
1981-82	10	Kaithuliya, Bhara-bhuriya, Bhura-Kishni, Bigra-bagn, Kutra, Bari-Anjaniya, Diya, Chandpur, Bhuriya Tharu, Matiha.
1982-83	14	Deuri, Etwa, Dhusari, Bibi, Navi-Nagar, Kheli Mahuwan, Chandeli, Unchi Mahuwan, Dhyampur, Magar, Gare, Saijana, Albirchho, Jadavapur, Ulani.
1983-84	14	Tharu Tisaur, Turka Tis- pur, Gauhar Patiya, Chhinki, Sujiya, Balkhara, Khamariya, Doekali, Purangarh, Khampur, Chan- Kaiya, Ratanpur, Phulai, Rahaniyan.
1984-85	15	Savaura, Banusa, Richai, Dohari, Nagla Tarai, Naugawa Thagu, Nagla, Dohri, Biria, Heraia, Lama Khera, Biscuta, Uldan, Gurkhura, Nauser.

The existing Ashram Type Schools in the area not meeting the local demand. The capacity of the existing schools have to be increased. The Ashram Type School located at Khatima needs to be strengthened by adding number of seats. At present there are 70 students studying in IX and X classes in this school and it has been reported to the Research Team that a number of applications have been rejected for want of accomodation etc. So it is proposed to add 35 seats by the end of 1984-85. The Khatima Ashram Type School will need to be up graded to the level of Intermediate Standard inorder to accomodate the boys who get through the high school examination.

The village of Bidaura is having an Ashram Type School of Junior High School Standard. There is a felt need to upgrade it to High School level. This school is serving the surrounding area of Janakmata and Gitorgani located in the north-west portion of Khatima.

The Research Team while contacting the prominent Tharu leaders and making the field visits has come to the conclusion that some more Ashram Type Junior High Schools need to be opened to meet the requirements. An 'Ashram type School' is proposed to be opened at 'Nausair' which will serve the southern part of Khatima area. The other Ashram Type School will be opened at Bhure Kishni which will serve the northern part of Khatima Tharu concentration.

The district hospital of this area is situated at a distance of about 150 Kms. Therefore it becomes difficult for the patients to reach the hospital for specialised services, because of the long travelling distance. Therefore, the Primary Health Centre (PHC) at Khatima is proposed to be up graded into 30 bedded hospital with specialised services like 'X' Ray, Orthopedic, Ophthalmologic, Dermatic, Pediatric units. Under the revised minimum needs programme some of the PHC's are to be up graded as a 30 bedded hospital, therefore, Khatima will satisfy the aforesaid norms. The field-visit observations of the Research Team have revealed that there is wide spread incidence of eye and skin diseases. The Lion Club, however is trying to meet the needs but because of scarcity of resources, it is unable to fulfil the needs of the area.

Nanakmata is a big pilgrimage Centre of Sikhs and there is only a dispensary manned by a compounder, which is not sufficient in view of the health needs of this place. Therefore, a hospital is proposed. Similarly, in Sitarganj also a district board dispensary is functioning but the arrangement of medicines is not sufficient to cater the needs of this area. Therefore, it is proposed to take over this dispensary and get it converted into a provincialised hospital.

Intensified health facilities are proposed to be provided by opening the dispensaries at following places.

The number of beneficiaries along with the estimated cost is also being given as follows:

Table

Sr. No.	Places	Population benefited	Estimated cost
1	2	3	4
1.	Jarasu Pratap-Pur	About five thousand persons will be benefited with the establishment of each of these dispensaries.	About two lakh of rupees will be spent for establishing each dispensary.
2.	Bidaura		
3.	Kutari/Chakarpur		
4.	Biriya		
5.	Sisauna		
<b>TOTAL</b>		<b>25,000</b>	<b>10,000,00</b>

Besides above hospitals/dispensaries the following Maternity and Child Health Centres (MCH's) are proposed to be opened to cater the needs of maternity and child care facilities.

Table

Sr. No.	Places	Population benefited	Estimated Cost
1	2	3	4
1.	Jamour	About three thousand persons will be	About thirty thousand of
2.	Gaurikhera	benefited by establi-	rupees will be
3.	Jarasu Pratap-Pur	shing each of these MCH Centre.	spent on each centre.
4.	Sisauna		
5.	Kuankhera		
6.	Charubeta		
7.	Deokali		
8.	Lama Khora		
<b>TOTAL</b>		<b>24,000</b>	<b>2,40,000</b>

To meet curative requirements it is proposed that a mobile dispensary should come into operation and medicines for common ailments may reach the door steps in these villages where all weather road facilities are available.

On an enquiry by the research team, it was found that delivery is conducted by the oldest woman of the family. But this is unsafe and may cause many diseases to the infants. To overcome this problem, it is suggested that a training programme of indigenous Dais is proposed to be organised at each MCH level. These Dais will get Rs. 20/- per month and will conduct the deliveries in their villages. A medical kit is also proposed to be supplied. Some medicines of common ailments should also be supplied in the kit. These medicines and the other articles will be replenished by the MCH Centre.

#### Drinking Water

Safe and potable drinking water is a necessity to insulate against hazards. Piped water supply prevents many diseases which originate from unsafe water.

The Assistant Engineer of U.P. Jal Nigam posted at Khatima has supplied the information regarding the programme of piped water supply. This facility of piped water will be provided in 126 villages of Khatima block by the end of March, 1980. In the next two years i.e. 1980-81 and 1981-82, all the remaining villages will be served with piped water. Thus at the end of March, 1982 all the tribal villages will have piped drinking water. Hence no programme regarding this is being proposed in this plan.

The completed projects of water supply and project under construction along with the benefited villages are given in the following tables:

Table (A.)  
Completed Projects

Sr. No.	Name of the piped water supply project	Number of villages to be benefited

## CHAPTER - VII PROJECT IMPLEMENTATION

No integrated area development plan can be said to have been formulated on sound lines till its quality is tested during its implementation. Again, how ever good a plan may be, its impact will depend entirely on how well it is implemented. Thus, in a way plan formulation and plan implementation are both an integral part of the total planning process. The implementation of the plan encompasses a vast number of functionaries, agencies and institutions in different fields and demands some basic qualities of leadership, dedication and aptitude for working among the people in general and target-groups in particular.

Presently, at the district and block levels, there is a multiplicity of agencies for implementation of a number of special programmes like SFDA, DPAP, HADA, CADA etc. This has resulted in imposition of super administrative structures upon the normal block and district level administrations and has distorted the very concept of block/district as basic units of planning. Consequently, this situation has created some fundamental problems of co-ordination at various levels.

With this back ground, it would be desirable to evolve some suitable mechanism so that implementation of this plan is carried out through the normal block agency(ies) functioning in the Project Area. However, seeing to special significance of the project for the welfare of tribals, it is proposed to constitute a high powered Tribal Development Committee at the District level, which will also oversee the progress of implementation and also evaluate some weaknesses in the programme for improving the quality of execution. The proposed membership of the Committee is

as follows:

1.	District Magistrate	Chairman
2.	Additional Director, Harijan and Social Welfare, U.P.	Member
3.	District Development Officer/ A.D.M. (D)	Member
4.	Divisional Forest Officer	Member
5.	Chief Medical Officer	Member
6.	Executive Engineer(Irrigation)	Member
7.	District Agriculture Officer	Member
8.	District Live-Stock Officer	Member
9.	Assistant Registrar (Coop.)	Member
10.	District Industries Officer	Member
11.	Executive Engineer (Tubewell)	Member
12.	Assistant Engineer (Minor Irrigation )	Member
13.	Executive Engineer(PWD)	Member
14.	District Harijan & Social Welfare Officer	Member
15.	Soil Conservation Officer	Member
16.	Representative Land Development Bank	Member
17.	Member Tharu Rena Parishad	Member
18.	Superintendent of Police (Rural Area )	Member
19.	Block Development Officer	Member
20.	Local M.L.A.	Member
21.	Director,Area Planning Division	Member
22.	Assistant/Deputy Director, Harijan & Social Welfare, Nainital	Convener

The main functions of the proposed high powered Tribal Development Committee will be as follows:

1. Regulate and guide the development in the project area in the Space and Temporal frame work of the Integrated Tribal Development Project.
2. Co-ordinate the activities of different departments.
3. Evolve adequate institutional, financial and administrative arrangements for effective implementation of various programmes as per time schedule.
4. Act as a liaison agency between the fieldagency and the State Government.
5. Monitor the progress of implementation of various sectoral programmes as sustained in the plan.
6. Take up adequate measures to safeguard against the landalienation problem in wake of transfer of villages from the Forest Department to Revenue Development.
7. To make arrangement of custom services for small and marginal farmers through the Agro-Industrial Corporation.

To assist the B.D.O. it is proposed to provide him some additional staff which would be responsible for carrying out tribal welfare programme in co-operation with the existing block team and village level

staff already posted in the area.

Name of Post	Number of Post	Scale (Rs.)
1. Additional Block Development Officer (Tribal)	1	400-750
2. Senior Fisheries Inspector	1.	350-700
3. Assistant Development Officer (Tribal)	1	250-425
4. Village Level Worker(Tribal)	5	230-380
5. Senior Clerk Cum-Acctt.	1	230-380
6. Junior Clerk	1	200-320
7. Typist	1	200-320
8. Store Keeper	1	200-320
9. Class IV	2	165-215

The B.D.O. (already an Officer in the Special grade) should be given some monetary incentive in the form of special pay, say Rs. 150/- P.M. to shoulder the additional responsibilities of tribal Welfare Programmes as formulated in the Integrated Tribal Area Development Project. Thus, total outlay required for this purpose during the life span of the project is estimated to be Rs. 5.00 lakh only.

## ANNEXURE B

## YEAR WISE PHASING OF PHYSICAL TARGETS

Sl. No.	SECTORS	PHYSICAL TARGETS DURING					
		1980- 81	1981- 82	1982- 83	1983- 84	1984- 85	Total

CHAPTER - VIII

FINANCING OF PROJECT

The integrated area development project of Khatima is a special project for the benefit of Tharus residing in that area. Their problems have been considered while making suitable proposals of different programmes. The productive programmes proposed in this project are limited to Tharus only. However the social facilities can be equally shared both by Tharus and Non-Tharus. The financial flow under different proposed programmes will ultimately reach the Tharus and will directly benefit them. The existing subsidy component of different programmes has been adopted as such in this project. This subsidy component will come from the normal block programmes and will be routed through Project Authority so far as Tharus are concerned.

The outlays required for the implementation of the sector wise programmes is given in the following table :-

Table  
Sector-Wise Proposed Outlays

(Rs. in Lakhs)

Sr. No.	SECTOR	State/ Central Share	Institu- tional finance	People's Particip- ation	Total
1	2	3	4	5	6
1.	Agriculture	71.31	4.10	69.33	144.74
2.	Minor Irrigation	76.14	71.13	-	147.27
3.	Animal Husbandry	44.44	39.62	3.18	87.24
4.	Fisheries	2.09	0.50	0.43	3.02
5.	Cooperation	13.48	208.73	-	222.21
6.	Industries	6.55	1.16	-	7.71

Cont.... N.P.

1	2	3	4	5	6
7.	Road	122.40	-	26.00	148.40
8.	Medical & Health	17.40	-	-	17.40
9.	Education	35.52	-	-	35.52
10.	Project Administration	5.00	-	-	5.00
	<b>TOTAL</b>	<b>394.33</b>	<b>325.24</b>	<b>98.94</b>	<b>818.51</b>

From the above table it is clear that Rs. 144.74 lakh has been proposed in Agriculture sector out of which Rs. 71.31 lakh will come from the state and Rs. 69.33 lakh through people's participation. An outlay of Rs. 147.27 lakh is proposed under Minor Irrigation, out of which Rs. 76.14 lakh will be made available from the project budget and remaining Rs. 71.13 lakh will be mobilised through institutional finance. More over in order to provide a strong credit structure, an outlay of Rs. 221.21 lakh has been proposed for the cooperative Sector. The proposed outlays for education and medical and health sectors are Rs. 35.52 lakh and Rs. 17.40 lakh respectively. The road sector claims a larger share of outlay ie. Rs. 148.40 lakhs.

The total outlay required for carrying out all the proposed programmes during the project period is estimated at Rs. 818.51 lakh, out of which Rs. 420.33 lakh will be met from the state/centre sector, Rs. 325.24 lakh from institutional finance and remaining Rs. 72.94 lakh through people's participations. Year wise requirement

-184-

requirement of outlays are given in the following table.

Table

YEAR	Sector-wise Outlay (Rs. in lakhs)				Total
	State/Central Share	Institutional Finance	People's Participation		
1	2	3	4	5	
1980-81	61.20	52.36	10.46	124.02	
1981-82	79.76	60.13	12.29	152.18	
1982-83	83.63	64.93	13.03	161.59	
1983-84	93.93	71.14	16.62	181.59	
1984-85	101.81	76.65	20.57	199.03	
TOTAL	420.33	325.24	72.97	818.51	

The break-up of the proposed outlays for Central/ State Sector following a proportion of 2:5. The year-wise break-up is given below :

Table

(Rs. in lakh)

Sl.No.	YEAR	OUTLAY			Total
		Central Sector	State Sector		
1	2	3	4	5	
1.	1980-81	17.48	43.72	61.20
