The area of this district is 17,658 Sq. Kms. and maintains total Population of 24.07 lakhs as per 1981 Census, with a density of 136 Persons per Sq. Km.

## 2. PHYSIOGRAPHY :

Two important mountain ranges in the district viz., Nallamalas and Erramalas running in parallel lines extending from north to south are situated in the district. The Erramalas divide the district into two well defined tracts from east to west. Between Erramalas and Nallamalas lies the eastern part of the district comprising of Nandikotkur, Pagidyala, Kothapalli, Pamulapadu, Atmakur, Velugodu, Jupadu Banglow, Midthur. Bandi Atmakur, Gadivemula, Nandyal, Mahanandi, Panyam, Banaganapalli, Owk, Koilkuntla, Saujamala, Kolimigundla, Uyyalawada, Dornipadu, Allagadda, Sirvel, Gospadu, Rudravaram, and Chagalmarri mandals. To the north in the Pagidyala mandal this tract is crossed by the crest of Krishna and Penner water shed at about 1000 ft. above the sea level, From this height the grounds slopes to the south along the river Kundu till it traverses into Pennar Valley. Major part of this tract is predominated by block cotton soil.

The western tract is occupied by Pathikonda, Tuggali, Maddikera, Devanakonda, Gonegandla, Dhone, Peapully, Veldurthy, Bethamcherla, Krishnagiri, Kurnool, Orvakal, Kallur, Kodumur, C. Belagal, Gudur, Adoni, Pedda Kadubur, Kosigi, Kowthalam, Alur, Asqari, Holagunda, Halahrvi, Chippagiri, Yemmiganur, Nandavaram and Mantralayam mandals. The terrain here slopes from south to north as district from other parts which generally slope from north to south, This part is drained by the river Hundri which Joins the river Tungabhadra near Kurnool town. The soil in the north western parts by the river Hundri are of black cotton contents, while the South-eastern parts are predominated by poor red soils.

## 3. CLIMATE :

The Climate of the district is normally good and on the whole healthy. The first three months are usually pleasant with moderate winds from South-East. In April and May the wind shifts to South-West with increased force and brings in welcome showers towards the end of May. During the succeeding four months the wind blows from Western side in the major parts of the District and brings in a fair quantum of rainfall. The wind is light and variable at the end of September forecasting the onset of North-East monsoon. After October, the weather is usually fine, rainfall is rare and wind is rare and the wind is light with occurrence of heavy dew.

## II

Although the total rainfall received is fair, it varies largely from year to year and is unevenly distributed in the district. The normal rainfall of about 620 m.ms. is so close to the minimum requirement of about 610 m ms. for normal cropping and that even a 5% shortfall in the annual rainfall is likely to affect the agricultural operations Quite adversely. Further variations in distribution of rainfall even in the years with more than annual normal rainfall lead to the failure of Crops. These two factors are mainly responsible for the frequent occurrence of drought conditions in the district.

The Hundri, a tributary of Tungabhadra rises in the fields of Maddikera in Maddikera Mandal receives a stream from Erramalais at Laddagiri in Kodumur mandal and joins Tungabhadra at Kurnool. It drains much of Maddikera, Pathikonda, Devanakonda, Gonegandla, Kodumur and Kallur mandals. This is turbid stream with sudden rise and fall.

The Kunderu also called Kumudvati rises on the Western side of Erramalais winds its way into Kunderu valley and flows in a southern direction collecting drainage all along its course from either side. It flows through Orvakal, Midthur, Gadivemula, Nandyal, Gospadu, Koilkuntla, Dornipadu, and Chagalmari mandals and there enters Cuddapah District.
