1. INTRODUCTION

1.1 The new pattern of Secondary Education. 10+2 had been introduced in the Union Territory, of Delhi in 1976 as a sequel to the reorganisations of Higher Secondary Education. The first batch of students was admitted to 9th standard in the new pattern in June, 1975. This batch will complete their 10 years of general education in April/ May, 1977. Facilities for 2 years of higher secondary education will, therefore, have to be provided in June, 1977 all over the Union Territory.

1.2 Since the characteristic feature of the two year higher secondary education is diversification which aims at offering students opportunities to choose programmes of study in a much wider field of education in keeping with their aptitudes, interests, & abilities with a view to increasing their employability, adequate facilities should be provided not only for the academic stream but also for a large number of vocational streams which would generally be terminal in character. In organising vocational programmes considerable thought has to be given to the vocations for which facilities have to be provided and to selecting the schools where these courses should be offered. Efforts should be made to utilise the available facilities of equipment and teachers in the existing educational and training institutions and other agencies as far as possible.

13 In view of the fact that the vocationalization programme should be introduced in Delhi from the academic year beginning from July, 1977 and there is an urgent need for making necessary preparations which include among others identification and organisation of the courses, and associating the existing technical and professional institutions, the Ministry of Education & Social Welfare have set up a Working Group-with the following members and the terms of reference :

- Shri V.R. Reddy, Chairman Director (Technical), Ministry of Education and Social Welfare, Government of India, New Delhi.
- Shri B.K. Singh, Education Secretary, Delhi Administration, Delhi.
- Prof. C.V. Govinda Rao, Department of Work Experience & Vocationalisation of Education, National Council of Educational Research and Training, New Delhi
- Dr. R.P. Singhal, Secretary, Central Board of Secondary Education, New Delhi.
- Shri B.N. Chaturvedi, Joint Director of Education (Plg.) Directorate of Education, Delhi Administration, Delhi.

Terms of Reference

a) Identification of institutions and industries where the existing facilities can be utilised for developing programmes of vocational education in selected higher secondary schools;

A

- b) Selection of higher secondary schools to be associated with this project;
- c) Identification of subjects/courses for which such facilities can be utilised;
- d) Determination of the extent to which such facilities could be utilised in terms of student numbers, hours of work, etc.;
- e) Financial implications, if any, of implementing this project;
- f) Suggestions for a suitable administrative and organisational mechanism to ensure maximum co-operation between participating institutions and to develop the project

as an essentially collaborative one between the concerned authorities;

g) Any other matter relevant to the effective implementation of this project.

1.4 The Group was assisted by Shri A S. Ahluwalia, Assistant Education Officer in the Ministry of Education and Social Welfare in its work.

1.5 The Working Group met several times and held discussions with individuals and representatives of organisations concerned with industrial, social and economic activities in the union territory of Delhi and officials of the concerned Ministries of the Government of India and the Delhi Administration.

2. ECÓNOMIC DEVELOPMENT

- A Background

2.1 Union Territory of Delhi has an area of 1,485 sq. kms. According to 1971 census, it has a population of 40,66,000 (rural 4,19,000 and urban 36,47,000). The density of population per sq. km is 2738. The territory is surrounded by the State of Uttar Pradesh in the East and by Haryana in the North, South and West. Apart from being the Union Territory, Delhi, as the Capital of the country, is the hub of national activity in various spheres.

Agriculture

2.2 The territory covers an area of 1,48,000 hectares of which over 1,00,000 hectares of land is under cultivation. As much as 25 per cent of the area is urbanised. Being primarily an urban area, Delhi has to depend for its food requirements on the adjoining States. The total production in the territory is hardly enough to meet even 1/6th of its food requirements. Bulk of the food, milk, eggs and fish requirements as well as practically the whole of fruits have thus to be imported. The future agricultural development has great potentialities for dairying, poultry, piggery and fisheries because of the perishable nature of these commodities on the one hand and higher per capita demand for them on the other. Along with poultry, ancillary industries like poultry feed manufacturing, manufacture of poultry equipment and commercial hatcheries have ample opportunities. The role of agriculture will however be quite insignificant. According to the estimates' of State Income of Delhi published by the Bureau of Economics and Statistics, Delhi Administration (July 1973), the share of agriculture and allied industries in the total income was about 6 per cent as against nearly 50 per cent for the country as a whole. The import of large quantities of dairy, fish and horticulture products, food grains, sugar etc. from different parts of the country creates huge problems of management, transportation and storage. To solve these problems effectively large numbers of trained workers at various levels are essential.

Industry

2.3 There are adout 32,000 industrial units employing over 2,52,000 persons in Delhi. Of them 65 to 70 are large-scale industrial establishments and the rest are units under the small-scale industries sector. The total investment in these units is of the order of Rs. 216 crores and the value of their annual production is about Rs. 365 crores. Industries make the single largest contribution to the economy of the, union territory of Delhi. Among the industries, textiles group occupies the top position followed by non-metallic products, metal products, transport equipment and miscellaneous manufactures. Together, these five major industry groups employ about 57 per cent of Delhi industrial force.

2.4 The elaboration and diversification of the industries in Delhi is well reflected in the detailed break-up of the manufacturing activity relating especially to the small scale sector. While the

production of items like textiles, articles of food consumption, foot wear, pottery, brass wares and ivory goods etc. has tended to become more and more varied, the addition of newer items has proceeded on a more impressive scale. This is particularly true of chemical, metallic products, electricals, machinery and transport equipment industries. These newer items include a great variety of machine tools, electrical and electronic goods, metal products, auto parts, plastic goods and precision measuring instruments. Particular mention may be made of the role of small scale industries in venturing into new lines of production. They are now engaged in producing modern sophisticated items like precision instruments, machine tools, automobile parts, automatic toys, transformers, tape recorders, transistors, room coolers, air conditioners, refrigerators, electrical gadgets, microscopes, hospital equipment and television sets.

2.5 The relative importance of the industrial sector in Delhi's economy is also reflected by the proportion of workers engaged. According to the industrial classification of workers from 1971 census, 21.5 per cent of the total work force is engaged in industry which is next only to the services sector. The fact of Delhi being the capital of the country and, therefore, of concentration of administrative and other services of Central Government is reflected in the proportion of workers engaged in other services which was as much as nearly 37%. Trade and Commerce occupies the third place employing 20 per cent of the work force.

2.6 Printing and publishing is also a very important category of industries in Delhi with heavy capital investment and employing a large number of workers. Food manufacturing industry is also an equally important category. The industries in Delhi are grouped into the following 21 categories on the basis of investment, production and employment. They are :

- 1. Textiles
- 2. Printing and publishing
- 3. Food manufacturing industries

- 4. Non-metallic mineral products
- 5. Metal products
- 6. Transport equipment
- 7. Electrical machinery, apparatus and appliances.
- 8. Other machinery
- 9. Beverages
- 10. Tobacoo
- 11. Foot wear and wearing apparel
- 12. Paper and paper products
- 13. Wood and cork industries
- 14. Furniture
- 15. Leather goods
- 16. Rubber products
- 17. Chemical and chemical products

ţ

- 18. Petroleum and coal products
- 19. Basic material industries
- 20. Miscellaneous
- 21. Personal services.

2.7 Delhi is at present in the midst of a remarkable phase of industrial growth. There is a reasonable hope that the process of growth will continue over the foreseeable future, in spite of the fact that the Union Territory of Delhi does not possess any natural resources on which industry could be based. The factors that favour industrial expansion in Delhi are its status and location, the growth in the size and increasing cosmopolitisation of its population, its infra-structure of services and facilities.& the positive role of the official agencies at the Central, State and local levels. Its location is a positive factor promoting growth of industry. Delhi dominates the entire northern India as a transport nodal point in respect of road, rail and air travel and haulage. It is this unique position that has helped to retain its importance as a distributing centre and developing also into a centre of banking, finance and a host of other commercial activities serving the trading community.

Banking, Trade and Commerce

÷,

2.8 There are about 44 commercial banks including the Reserve Bank of India in the Delhi Metropolis which comprises the Delhi Municipal Corporation, New Delhi Municipality and Delhi Cantonment. These banks are made up of 30, scheduled banks, one non-scheduled bank, six cooperative banks and six foreign banks. The total number of their offices and branches is 275 comprising 9 registered offices, 28 pay offices, 40 subbranch offices and 198 branch offices. All the different localities of the Delhi Metropolis are served by these offices. The importance of Delhi as a trade centre has been progressively increasing because of its important location with a net work of railways and national highways linking it with all parts of the country. It is undoubtedly the largest trading centre in the whole of Northern India. More than 20 per cent of the work force in Delhi is employed in banking trade and commerce.

Communications

2.9 Delhi has fairly good roads and transport system. There are about 69,000 private cars, 4000 other private vehicles, 5000 taxis and 2000 public buses of the Delhi Transport Corporation operating on more than 60 routes. The persons, employed in the transport, storage and communications is 9 to 10 per cent of the total work force.

Construction

2.10 This is another activity which employs a

large percentage of work force i.e. between 5 to 6 per cent. Delhi Development Authority is responsible for planning and implementing the Delhi's Master Plan. Under the large scale acquisition, development and disposal of land scheme. over 4856 hectares have been developed for setting up new residential, industrial, commercial and institutional enclaves. So far more than 20,000 residential, 4500 industrial and 6000 commercial plots have been developed. Besides under the special housing scheme over 14,337 house flats have been constructed and about 19,000 more are under construction. About 15 parks and woodlands have also been developed in the area. Construction sector in Delhi will continue to provide good employment opportunities at all levels in view of increasing tempo of construction activity.

Public Health

2.11 There are 55 hospitals, '248 dispensaries and eight primary health centres in Delhi in addition to private nursing homes. 'The total bed strength is 10352. Hospitals and public health organisations employ large number of para medical personnel besides doctors.

3. EDUCAFIONAL FACILITIES

3.1 The Union Territory of Delhi has been divided into four districts; East, West, North and South for the purpose of educational administration and providing educational facilities.

3.2 The literacy rate in Delhi is as high as 56.61 per cent, next only to Kerala which is 60.42 per cent. The all India average is 29.46 per cent. In the urban area of the territory the literacy rate is 58.95 per cent while in the rural area it is 36:23 per cent. The literacy rate among men is 63.71 per cent and among women 47.75 per cent.

3.3 In 1975-76 there were 1629 primary schools, 375 middle schools and 594 higher secondary schools. At the beginning of the academic year 1976-77 the number of higher secondary schools has risen to 607 out of which 73 schools are located in the rural area. Of them 372 schools are for boys and the rest 235 are for girls.

3.4 The total enrolment of girls and boys in the Union Territory of Delhi in higher secondary schools from class 9 onwards was 1,92,000 for the year 1973 out of the population of 2,95,000 children in the age group of 14-17 and 97,000 in the age group 17-18. In 1975-76 the enrolment in the higher secondary classes from 9th to 11th was 2,20,000 comprising 1,28,000 boys and 92,000 girls. Extensive facilities are available for higher education. There are 54 colleges of general education offering courses in humanities, sciences and commerce at the under-graduate, honours and post-graduate levels. All these colleges are either constituent colleges or affiliated to Delhi University. The enrolment in these colleges in 1975-76 was around 77,500.

3.5 In technical education a big net work of institutions from colleges down to technical higher secondary schools has been established. There are six institutions offering courses in engineering and technology at the first degree level and above. These institutions have an annual intake capacity of nearly 800 students. Of them the Indian Institute of Technology, one of the five higher technological institutions in the country and the School of Architecture and Town Planning, have been established by the Government of India as All-India Institutions. The courses offered by degree institutions include civil, chemical, electrical, electronics and mechanical engineering, textile, technology, architecture pharmacy and applied art.

3.6 There are 14 institutes offering a wide range of diploma courses in engineering and technology for higher secondary passed students. The annual admissions to these institutions is nearly 2500. Among them are three polytechnics for boys, three polytechnics for girls, one Institute of Hotel Management, Catering and Nutrition, two Schools of Pharmacy, one School of Art and one School of Commercial Practice. The courses offered include civil, electrical, mechanical, electronics, communication and automobile engineering, air conditioning and refrigerations, architectural assistantship, secretarial practice, hotel management, commercial art, library science, printing technology, beautician course, marketing and sales management, and company secretaryship. These institutes offer full time day courses as well as part time evening courses. The total number of courses offered is around 40.

3.7 For providing training in crafts and trades there are eight industrial training institutes in Delhi including one at Kasturba Gandhi Marg exclusively for women. These training institutes offer wide variety of courses numbering 46 in engineering and non-engineering crafts and trades. The number of students admitted is 5700 a year.

3.8 In the early sixties three junior technical schools for providing technical and vocational training at the secondary level were established at Kashmere Gate, Narela and Okhla. For various reasons these schools did not prove to be successful and fulfill the objectives for which they were established. They were, therefore, converted into technical higher secondary schools. The course of study in the three year technical higher secondary programme comprised all the subjects which are prescribed for the science stream of higher secondary education and training in mechanical and electrical workshops. This experiment had also proved to be a failure. A committee appointed by the Delhi Administration to review the performance of the schools and to examine the feasibility/ desirability of their continuance had recommended to stop admissions to these schools from May 1975 and convert them into full-fledged vocational schools as and when the vocationalisation programme at the higher secondary level in the new pattern of education is introduced. The Delhi Administration had accepted this recommendation

and discontinued admissions in the technical higher secondary programme since 1975. The last batch of students from these schools in the old programme will pass out in June 1977. One of the schools at Narela was closed down in 1975 and the students were distributed among other schools. Some of the equipment in the school was transferred to an ITI and the rest are kept in Okhla School. These technical schools have facilities for training in sheet metal work, fitting, wood working, heat treatment, foundry, blacksmithy, machine shop and electrical workshop for an annual admission of 180 students each. All these facilities are available now for the vocationalisation programme.

3.9. Extensive facilities are also available for medical education in the Union Territory of Delhi. There are four medical colleges including the All India Institute of Medical Sciences, 11 nursing schools and three para medical schools for training doctors, nurses and para medical personnel. All these institutions are attached to hospitals. Among the para medical personnel, radiographers are trained in Irwin Hospital and Holy Family Hospital, Dental mechanics in Safdarjung Hospital, Pharmacists (compounders) in the Colleges of Pharmacy, Laboratory Technicians in V.P. Chest Institute and Holy Family Hospital and O.T. Assistants in Safdarjung Hospital.

3.10 A list of technical, vocational, medical, para medical and other professional institutions in the Union Territory of Delhi with the courses offered by them is given at Annexure-I.

4. IDENTIFICATION OF VOCATIONAL COURSES

4.1 The aim of vocational: education at the higher secondary level is to provide education and training for acquiring practical skills, attitudes, understanding and knowledge relating to occupations in the various sectors of economic and social life. The education should enable the students to vontribute their best to the economic development of the country and to employ their skills to earn thein living. It is, therefore, necessary to select those vocations which provide employment opportunities including self-employment either at present or in the near future: The courses should be based on the vocational needs of the community.

412 To identify the vocational needs of an area or state and to prepare a plan for education and training in vocations relevant to the needs, socioeconomic: and vocational survey of the area or state should be carried out. In such a survey, the present industrial, commercial, agricultural, trade, transport, health, construction, educational, social and other activities have to be taken into account. In addition to the existing activities, it is also necessary to identify the emerging industrial and commercial development trends to assess the employment opportunities responsive to these trends in the near future.

4.3 It has not been possible for the working group to undertake a survey of this type to identify the vocations and to estimate the numbers that are needed for various occupations, because of the very short time at its disposal. The group, however, examined several available reports of a similar nature relevant to the task, and interviewed representatives of organisations and individuals involved in the social and economic activities in the Union Territory of Delhi.

4.4 In order to indentify the vocations/occupations that are currently in demand in the Union Ferritory, the following information was obtained from the Directorate of Employment, Delhi Administration :

- (1) Requisition received by the Employment Exchanges, occupation-wise, during, the last one year.
- (2) Number of placements made, occupationwise during the same period.
- (3) Occupations for which no objection certificates were issued by the Employment Exchanges because suitably qualified candidates were not a ailable on the live registers maintained by the Employment Exchanges.
- (4) Occupations for which there was large turn over.

4.5 The information supplied by the Directorate of Employment for the period 1.7.1975 to 30.6.1976 in respect of Employment Exchanges at Pusa, Daryaganj and Arab Ki Sarai may be seen at Annexure-II. It covered technical, clerical and para-medical occupations. Among the technical category, occupations for which no objection certificates were issued, include Surveyor, Architectual Draughtsmen, Draughtsmen Civil, Draughtsmen Mechanical, Electronics, Cutting and Tailoring, Interior Decoration, Photography, Instrument Mechanic, Refrigeration & Air-conditioning

Octupations, Wireless Operators, Business Machine Repairers and Textile Designers. In the Para Wediweal and Clerical Categories, Laboratory Assistants, Office Assistants, Catering Managers, Accounts Receptionists and Social Workers Assistants, figured prominently. 77

"From'the data furhished on requisitions 46 received by the Employment Exchanges and the placements made occupations-wise during the last one year, 'it was observed that there had been a great demand for draughtsmen of 'all categories, cutting and tailoring, wireless operators, électricians, electronic 'technicians, motor' mechanics, refrigeration and air-conditioning mechanics, sheet metal workers, anstrument mechanics, pump operators, pharmacists, nurses, primary teachers, PGTs and trained graduate teachers, 'laboratory assistants, librarians, office assistants, accounts clerks, retail salesmen, and agricultural field men. "The Directorate of Employment has also, furnished a list of shortage occupations as noticed through the Employment Exchanges', statistics as well as those indicated by various employers in the returns rendered by them periodically under the Employment Exchanges (Compulsory Notification tof Vacancies) i Act, 1969. They short age occupations include steppersphere, electricians, computer programmers, daboratory assistants, accountants, rregeptionists, boiler attendants, etc. Details of these occupations are given at Annexure III.

It is reasonable to assume that jobs in 4.7 large and organised industry and services will not sincrease fast enough to employ appreciable numberrof trained work force. On the rother hand, small scale industries sector including handicrafts. bcottage industries and village dindustries; agriculature sector; cooperative marketing; servicing; repairs, and maintenance of tools, limplements, phousehold gadgets and machinery provide not apply, more semployment opportunities, but also , scope, for self employment, and centrepreneurship. Sufficient-mativationsphould therefore the develo-. ped in boys and girls! for self employment and rentreprepeurship in the vocationalisation program-Entrepreneurship, requires imagination, mes, enterprise and ity to take risks and, therefore,

Mechanic, Electrician, Glass Blowing, Relating 11 is difficult to rachieve from the beginning. It is not always we find many people possessing the requisite qualities for entrepreneurship much less among the students at higher secondary level. However, a systematic and organised , training in rselftemployment and entrepreneurship, right from the beginning will go a long way in changing their outlook and building confidence in them to be selfreliant.

> 4.8 'National Alliance of Young Entrepreneurs (NAYE), an organisation financed by industries for their own future development and for training 'suitable personnel, during the discussions the group had with their representatives, laid greater emphasis on this aspect of training to every stu-"dent taking up vocational studies. NAYE is prepared to organise short term training courses in this area and, conduct tests to select prospective entrepreneurs who may be given later an intensive training for about a year or so during which period selection of tradessor industries, arrangement for financial resources and various other things can be worked out. This appears to be a positive approach to train entrepreneurs in the 'country,' however, small the number may be. NAYE is also willing to train teachers in batches by organizing orientation courses.

4.9 The All India Handierafts Board land the All India Khadi and Village Industries: Commission are also eager to coordinate their training progutammes with the vocationalisation scheme. A variety of activities such as carpet making, wood carving, leather work, soap making, hand made paper, 'toy making, spinning and weaving, textile printing, block, making require to , be integrated with the scheme.

14.10¹ The toy industry in the country has "plans to, raise its output. to about 10 crores within the next - few years, and to increase export earnings' from the present Rs. 30 lakhs'a 'year to TRS: 13 crores a year. There are proposals to form a Toy Development Board and a Toy! Design Centre. Manufacturers of mechanical and educational toys have a great potential. The Union Territory of Delhi is one of the few centres in India, which has already , developed this activity to a significant extent. Future plans being, undertaken for the development of this industry will create ample opportunities for self-employment as well as for jobs.

4.11 Another very important area which will provide vast avenues for employment at all levels is export and international trade. The country is poised for a great break-through in the international trade. By the end of the 5th Plan period the trade is expected to reach the target of Rs. 10,000 crores per annum. The operations involved at various stages require people in large numbers with different skills and competences particularly at the middle level. Representatives of several agencies, whom the group met, indicated a great need for properly trained export and import assistants.

4.12 Tourism and Hotel Industry is yet another activity which is fast developing. Along with its development, the need for trained persons in occupations such as reception and book keeping, bakery and confectionery, cookery, restaurant counter service and tourist services will also be on the increase. Delhi being the capital of the country, has become a very important centre for internal as well as international tourism. The hotel and restaurant industry is also fast growing. Facilities for training middle level work force for this activity have been, so far, very limited.¹

4.13 In the recent past, another economic activity which has made rapid strides in terms, of production, distribution and export, is the garment and wear apparel industry. India has great potentialities to compete in the International market in this area which is labour intensive because of the availability of cheap fabour and the raw material. Printing industry, is another one which falls in this category. Therefore, occupations like cutting and tailoring, costume design and garment making, printing, composing, type, setting, proof reading, litho press operators, block making will need trained personnel.

4.14 Electronics and electrical appliances, radio and television, airconditioning and refrigeration are some of the areas of activity which need trained manpower not only for production but also in equal numbers if not more, for maintenance, repairs and servicing. As communications develop and the standard of living improves, these industries grow providing more employment. The growth of electronics industry has been very impressive and the future for this industry is very bright.

4.15 All the production activities discussed above, have distributive functions like distribution, sales and retailing etc. which need personnel trained in these occupations. Whether we talk of industry, trade, commerce, transport, health, public service, education or any other economic or social activity, there are certain occupations common to all which are normally referred to as business and office occupations. These are stenography and typing, book keeping and accounts, business machine operation, computor operation, programming, data processing, system analysis; materials management involving receiving, storing, issuing and requisitioning of materials, inspection and identification, inventory control and administrative occupations like office assistants, receptionists, secretaries to the executives etc. All these and many more allied occupations need trained personnel.

4.16 Education and health sectors require a large work force that can be trained at the +2 level of education. Kindergarten teachers, primary school teachers, health workers, radiographers, dental mechanics, opticians, anasthesia mechanics, X-ray technicians, nursing attendants and laboratory assistants are a few among several categories of personnel required.

4.17 Individuals, officials and representatives of the agencies and organisations actively involved in the socio-economic development activities in the Union Territory with whom the group individually or collectively had discussions on vocationalisation of higher secondary education, have envinced great interest and welcomed the programme. They suggested several courses from their experience and perception which in their opinion would be relevant and responsive to the needs of the Union Territory. The names of persons, the group met, are given in Annexure IV.

4.18 The Central Board of Secondary Education, Delhi, has, with the help of academics and others, identified several vocational courses in a large number of fields such as agriculture, industry, trade and commerce, arts and crafts, medicine and public health, home management, and secretarial training etc. and prepared syllabuses for the same. While suggesting the courses, the Board said that great care should be taken by the individual schools in the selection of courses. It will not be appropriate to introduce any course in any school unless it is relevant to local needs, and employment potential, and unless the school possess adequate resources and training potential... The Board also said that it would be better if the selection is based on employment demand surveys.

4.19 Similarly, the NCERT through its various committees such as Vocational Education Implementation Committee and the Curriculum Committee has also identified several courses under broad areas of human activity such as agriculture, distribution, health, home economics, business and office, technical education, industrial, and special needs on All India level.

4.20 The group is of the opinion that the proper and-correct way of approaching this problem is to identify the occupations which are in demand in various sectors of economic and social activity. This should be done by carrying out scientific, social economic survey and area skill survey of the Union Territory in cooperation with the industry, trade and commerce. Such surveys will not only identify the occupations in demand but also estimate quantitatively the numbers required. These surveys are not one time exercise. As technology changes the nature and pattern of occupations change. It is, therefore, necessary that these surveys should be updated continuously.

4.21 The next step is to delineate the precise functions; to determine the knowledge, skills and competencies needed to perform the functions; and to design courses which will best serve the purpose. This demands job analysis or activity analysis of occupations: It is neither possible nor is it necessary for any educational system to provide education and training to persons to occupy particular positions or jobs. But the system should be responsive to the training of people for clusters of occupations.

4.22 On the basis of job analysis, occupations of allied nature may be grouped together to form clusters, according to well defined common characteristics and a clear understanding of the functional requirements of each cluster developed. The understanding must be expressed in terms of knowledge, skills and competencies for different clusters of occupations. It is advisable to undertake this analysis in cooperation with employers wherever possible. The curriculum should be designed after carefully defining the objectives of the courses.

4.23 While recommending the above approach for identifying courses and designing curriculum for them, as an expedient measure for the present, the group, on the basis of the analysis of available data and discussions with several people, identified some courses for introducing in the schools in the Union Territory. They are given at Annexure V.

- <u>.</u>

5. SELECTION OF SCHOOLS

From the 606-higher secondary schools in 5.K. the Union Territory of Delhi, according to the Directorate of Education; about 70,000 students are expected to appear for the 10th standard exal mination in the new pattern of education in March/ April, 1977 although the Central Board of Secondary Education estimates the number around 60,000: On the basis of the performance of students the previous years, it is estimated that 45,000 to 50,000 students would be eligible for further education. Many of them may join higher, secondary schools with academic stream at +2level with the idea of joining universities and other institutions for t⁺e tertiary level education in Humanities, Sciences, Commerce and professional courses like Agriculture, Engineering and Technology, Medicine and Veterinary Sciences. Some of them may join polytechnics and some others may. join industrial' training institutes, para, medical schools and institutions offering job-oriented courses. Of the total number of successful, students in the 10th grade examination, ilfose going for academic studies at the +2 level will undoubtedly be the largest in number. It is estimated that nearly 25,000 to 30,000 students would join academic stream. Polytechnics and other technical institutions will take nearly 2,500 students. Industrial Training Institutions admit about 6,000 students. Para-Medical and other Institutions may provide facilities for over 1,500 students. A substantial number may drop out from the educational system for some reason or the other.

5.2 At the suggestion of NCERT a sample survey was conducted by the Directorate of Edu-

> 11 cation, Dethi Administration in October 1976 to: assess the views, interests, choices and aptitudesn of students in regard: to their furth r education. The students of Class X were asked to fill in quest tionnaire which was prepared in consultation with the NCERT. ' The sample' consisted of about 9,079 Boys and gitls in urban as well as rutal schools' (1201' ite:" 13'2% from 15'rural schools" and 7878 i.e., 86:8% from 95 urban schools)!." The survey covered among others, "the socioeconomic' and 'educational' background 'of the patents of the popils from rural as well as utbain schools. Apart from the opilion of the pupils. regarding their preferences for job, higher, studies. or training, information, has also been obtained. about their preference, for part time vocational, training in case they opt, for job or higher studies,

531 Off' the '9079" pupils; an overwhelmingmajority have opted for Higher education while! fairly 'large' proportion is' still undecided. The pupils opting for Higher education account for 6691 (73.7%) and those undecided are 14027 (15:4%). Offly 522 pupils (5:81%) Have expressed their option for vocational courses. Pupils prefering vocational courses are more from the lower income group. The maximum number of pupils offering vocational courses are in the income range below Rs. 1000 per month both in rural (60%) and urban (90.5%) areas. There is better understanding of the utility of the vocational courses amongst urban parents in that around 17 per cent wards whose fathers are either graduates or post graduates have opted for vocational courses where as it is only 5.2% in the case of pupils from rural area. Both in rural and urban areas pupils whose parents are in clerical and other occupations have opted for vocational courses.

5.4 About 71.1% (6457) out of 9079 pupils have shown positive inclination in undergoing parttime training at some stage or the other. Of these pupils 3835 (59.5%) have opted for part-time courses after 10th class and another 1941 (30%) pupils prefer to have part-time training after graduation and the remaining 681 pupils have expressed their desire to undergo part¹ time-train², ing at any other time.

5.5r: Theo result of the sample survey should not bestaken as the sole guide, in as much as the students/were not aware of theo benefits of the vocational seducations at the secondary; level. Proper vocational guidance and career counselling to students from the age of 114 would got a long way to enable them as well, as their parents to make, a choice, regarding the type of education they should obtain. The counselling should be organised in the schools by training teachers in connselling, by organising careers, talks, by ... industrialistse bankers, technical, teachers, and educators, and alsorby organising open days and exhibitions in schools, technical, institutions and, industry; Notwithstanding: the, finding of the survey the Group estimates: that about 5000 students would join vocational stream in 1977-78.

5.6 The Group considered at great length the citeria for selecting schools for offering vocan tided) courses. The Group also considered the optimum number of courses to be introduced in each school and the number of students to be admitted in each course. The Group is of the viewe that it would not be constant vocational courses in any school if the number is less than 60. The optimum number is 1601. At Group of four allied courses with 25 students in each course may be introduced in each school. Keeping in view that facilities for vocational education should be spread all over the Union Territory, the Group laid down the following criteria for the selection of schools :

- 1. Industrial, commercial and related occupational developmental and economic activities in the area.
- Availability of training facilities in the vicinity its existing: technical, vocational, medical, and para-medical institutions; thespitals, industry and commercial agencies for providing training, to the students wherever required to the extent, possible
- 3. Possibility of a large number of students, opting for vocational courses in the locality.
- Ayailability of class. room accommodation, laboratory, and library, facilities. and equip, ment, if any, useful for vocational programmes.
- 54 Past academic record of the school.
- 6 Availability of enlightened; motivated,
- c articulated and enthusiastic group of
- d' teachers, with a strong, commitment to vocationalistion.
- 7. Einancial resources, of the management in the case of private schools.
- 8. Capacity to secure the support and assistancerof the community and industry ground.

On the basis of the above criteria, 50 schools were selected for offering vocational programmes. The list of selected schools alongwith the justification is given at Annexure VI.

6. 14

6. ORGANISATION OF COURSES

6.1 The Union Territory of Delhi, in the present state of industrial development, trade, commerce and services, and with a big net work of technical, vocational, medical, para medical, and other institutions and also with an increasing potential for further economic activity, is ideally situated for organising vocational education programmes at the +2 level. The courses identified by the Group should be introduced in the proposed schools on the basis of the following considerations:

- i) Courses in the field of agriculture should be offered in the schools around which the corresponding production or trade activity exists, e.g. a course in dairy farming may be offered in a school near the Delhi Milk Factory or in a rural area. Similarly courses in Poultry, Floriculture. Olericulture and Ancillary Industries may be offered again in schools situated in rural surroundings.
- ii) Courses in the field of medical and public health should be offered in schools in the vicinity of hospitals and medical colleges.
- iii) Courses for hotel and restaurant industry may be offered in schools situated near Institute of Hotel Management, Catering and Nutrition, Pusa and hotels.
- iv) Electronics, electrical equipments, air conditioning and refrigeration, T.V. and radio courses may be offered in schools nearby polytechnics and I.T.Is. which are offering courses in these fields.

- v) Courses for business, commerce and services occupations, which do not require substantial hardware, may be offered in as many schools as possible where commerce subjects in the academic stream are taught since the corresponding activities are spread all over the Urban area of the Territory.
- vi) Teachers in the existing institutions and people from industry should be utilised for teaching on part time basis.

6.2 Keeping in view the principles stated above, courses to be offered in each of the fifty selected schools have been decided. They are given at annexure VII. Four courses out of those recommended against each school may be introduced on the basis of the demand from the students.

6.3 The technical higher secondary schools at Kashmere Gate and Okhla, mentioned earlier in the Report; although possess equipment and staff do not have proper buildings of their own. Okhla School is functioning in the hostel building of the polytechnic. The other school is housed in an old building in the Kashmere Gate Polytechnic Campus.' The Group was informed that action had already been initiated to provide permanent buildings to these schools. The Group recommends that these two schools may be converted into vocational schools in technical, industrial and other allied areas for which some equipment and staff are available in the schools. When proper buildings are constructed, the possibility of introducing academic stream in these schools at +2level may be considered.

6.4 Coordination of available facilities namely equipment and instructors in industry, educational and training institutions involves a great deal of work. Persons actively engaged in socio-economic activities in Delhi should be closely associated in this effort. The Group, therefore, recommends that a State Vocational Education Board be constituted to advise Delhi Administration on the planning, organisation, coordination, and development of vocational education in the Union Territory of Delhi. The Chairman of the Board should be no less a person than the Chief Executive Councillor. The Board may consist of 25 members which should include among others, the representatives of production activities and services, trade and commerce, administration planning and educational institutions. The Board should not only conduct a survey of economic activities and potentialities and consequent opportunities of work from time to time but also assess manpower needs. It will identify courses to be organised, select schools and recommend facilities to be provided for them. The Board should meet at least four times in a year. The Group suggests the following composition and functions for the Boar

1.	Chief Executive Councillor	Chairman
2.	Education Secretary	Member
3.	Finance Secretary	,,
4.	Planning Secretary	99
5.	Director of Education	"
6.	Director of Technical Education	**
7.	Director of Employment	,,
8.	Director of Industries	,,
9.	Director of Agriculture	,,
10.	Representative of Ministry of	
	Education	"
11.		
	General of Health Services/Health	
	Ministry	,,
12.	Representative of Ministry of Indus	
	trial Development/Development Commissioner of Small Scale In-	
	dustries	
	مد <u>د م</u> گس	,,

Functions

1. To make a survey of economic activities and potentialities and to prepare a 'Vocational Profile'.

2. To assess the manpower requirements at the middle level in different clusters of skills, vocations and occupational areas.

3. To project future manpower needs and estimate demands for various sectors and occupations.

4. To identify and formulate vocational education programmes to meet the manpower needs.

5. To design and develop, curriculum for courses on the basis of job requirements.

6. To modify the existing courses and introduc courses wherever and whenever necessary in the light of the shifting pattern of vocations.

15.	ance of Young Entrepreneurs	Member
14.	Chairman of Delhi State Develop-, ment Corporation	, , ,
15.	Representative of the Federation of Association of Sma ¹ Scale Indus- tries ,	"
16.	Representative of Banks/Insurance Companies	·,,
17.	Representative of Small Scale Services Institute, Delhi	,,
18.	Representative from Industry	, e c
19.	Representative of Delhi Chamber of Commerce	• •
20.	Representative of NCERT	"
21.	Representative of Central Board of Secondary Education	,,,
2 2.	∫ Representatives from schools	
2 3.	offering vocational courses	"
24.	Representative of All India Women's Conference	53
25.	Joint Director of Vocational Education	Member- Secretary

13. Representative of National Alli-

8. To coordinate the use of available facilities for training in all establishments.

9. To restablish links between productive activities and services, trade and commercecent the one side and administration, planning, and educational institutions on the other.

6.5 For the implementation of the recommendations of the Board a Vocational Education Unit should be set up in the Directorate of Education, Delfin, which will act as "A" Secretariat to the Board. The Unit may be headed by an officer of the rank of Joint Director of Education who will also be the Member-Secretary of the Board. He may be assisted by one officer at the level of Deputy Director of Education and two of the rank of Assistant Directors of Education and macessaty secretarial staff. The officers appointed , for the Unit should possess professional qualificaotions, with field experience.

"6.6 "The Unit should be responsible to monitor the vocational education programme. "It will carry out "the functions of the Board, collect "data, conduct surveys, 'assess manpower requirements with the help of experts and place the material before the Board for its consideration and advice. It should organise vocational guidance and career counselling to the students in the classes 9 to 10. One of the most important functions of the unit is the follow up action i.e., placement of students in the industry in cooperation with the employment exchanges and to obtain cooperation with the employment exchanges and to 'obtain'feedback from the employers regarding the duality of training. "In addition, the Unit should also organise pre-service and in-service training of teachers, and apprenticeship training for students.

7. FINANCIAL IMPLICATIONS

A. As stated earlier in the Report, it is proposed to organise vocational courses for 5000 s-students in 50 schools with an annual admission of 100 students in each school. Thus- the facilities to be provided should be for an enrolment of 10:000 'students.' Each school will offer four vocational courses with 25 students in each course." In selecting courses to be offered in each school, care has been taken to see that the courses are allied in nature as far as possible. The selection of courses was also influenced by location of the school and the instructional facilities available in the existing institutions in the vicinity and the availability of facilities in terms of class rooms, laboratories, library and staff for teaching tanguages, basic sciences and other common subjects in the school. The main reason for offering vocational dourses in schools: located near the existing professional and technical institutions industry, trade, commerce and other telated economio activities was to utilise the equipment and staff available in them for the vocational courses to the maximum possible extent.

7.2 According to the frame work of vocational education suggested by the NCERT, °25 per cent of the time in the vocational stream will be devoted to the study of languages and the general studies (social, economic, scientific etc) and 25 per cent of the time will be spent on the study of science, social sciences and humanities courses designed to understand the basis and scope of various vocations and the remaining 50 per cent on vocational and practical work. Approximately 50 per cent of the education is common between vocational and academic streams. It should, therefore, be possible for the staff appointed for the academic stream to hundle 50 per term of the work load of the vocational stream also.

7.3 It may not be easy to recruit teachers who are qualified as well as possessing relevant occupational experience, on a full-time basis for the salaries offered in the higher secondary schools. In view of this, all possible efforts should be made to obtain the services of experts, technicians and skilled craftsmen from industry and teachers and instructors from professional institutions on parttime basis. It is always easier to train a master craftsman or a technician in vocational education to provide him with necessary teaching skills than to train a vocational teacher to acquire occupational skills and competences. Teachers should, therefore, be recruited as far as possible from the industry or the relevant occupational activity on the basis of their proven ability in their occupational field. Their occupational experience and training provide the technical content for their teaching. However, before the skilled craftsmen or technicians can translate their skills and knowledge to others, certain essential teaching skills and competences must be acquired through preservice or in-service teacher training-programmes. These training programmes are an integral part of the professional development process. Provision should, therefore be made for the continuous training of teachers to update and upgrade their teaching as well as occupational competences.

7.4 Until the curriculum for the vocational courses proposed to be introduced is designed

and the syllabus framed, it is not possible to precisely estimate the time spent in class rooms, laboratories as well as in workshops or industry. However, for the purpose of calculating staff requirements at this stage it is assumed that 50 per cent of the time will be spent by the students on vocational education which includes theory and practice.

7.5 Keeping in view the above points, the financial estimates for introducing vocational courses in the Union Territory of Delhi are calculated as follows :

Culated ab long to t	Hom course to course and Hom seneor to seneor

7 'n students in the existing professional institutions and industry, it may be necessary to provide facilities in certain areas and courses in the school

itself. At this stage, in the absence of the curri-

culum of studies for various courses and informa-

tion about the facilities available in the existing

institutions for these courses, it is not possible for

the Group to work out the precise requirements

of equipment and instruments to be provided in each school. The Group, therefore, recommends

that a lumpsum provision of Rs. 60,000 per school

(i.e. Rs. 50,000 for equipment and Rs. 10,000 for

library) for non-recurring expenditure be made

for buying equipment and books that are consi-

dered necessary. The requirements will differ

from course to course and from school to school

Rs., 60,00,000

per annum ne

1. Scientific socio-economic survey and area skill survey of the Union Territory in cooperation with industry, trade and commerce should be carried out periodically to identify the occupations in demand and to estimate the numbers required. Such surveys should be updated continuously:

4.20 2. Job analysis or activity analysis of occupations in demand should also be carried out to delineate the precise functions, to determine the knowledge, skills and competences needed to perform the functions and to design the courses which will best serve the purpose.

4.21

6.2

5.**5**

3. Students in vocational education should be motivated for self-employment and entrepreneurship. A course of training in this aspect should be made compulsory to all the students taking up vocational education. A systematic and organised training in self-employment and entrepreneurship right from the beginning will go a long way in changing their outlook and building confidence in them to be self-reliant.

4. Vocational guidance and career counselling should be given to all children from the age of 14 in the schools by organising career talks by people from industry, professional institutions and other experts.

5. Vocational education facilities should be provided for 5000 students at +2 level in 1977-78 in the Union Territory of Delhi. 5.5 6. The vocational programmes should be organised in 50 schools selected by the Group at the rate of 100 students in each school.

5.6

7. The selection of schools in future, should be based on industrial and other economic activities in the area, and the availability of training facilities in the existing industry and educational institutions.

''s. ' Four vocational' courses out of those reo commended against ''each selected school may be ' offered' in 1977-78 depending upon the demand from the students (38 al.)

6,2

5.6

9. The technical higher secondary schools at Okhla and Kashmere Gate should be converted into vocational schools.

6,3

10. The State Vocational Education Board should be set up under the Chairmanship of the Chief Executive Councillor with 25 members representing various production activities and services, trade and commerce, administration, planning and educational institutions to advise the Delhi Administration on the planning, organisation, coordination and development of vocational education in the Territory.

6.4 11. A vocational education unit should be set up in the Directorate of Education with full-time officers and supporting staff to work as the

secretariat to the Board and to monitor and administer the vocational education programmes.

6.5 & 6.6

As soon as the syllabus and the curriculum 12. for the courses proposed are ready, arrangements should be worked out for the staff and training facilities on a part-time basis from the existing institutions and industry.

Pre-service and in-service training for-13.

.

teachers of vocational education should be organised.

7.3

7.6

Ģ

14. The total non-recurring provision required for equipment and library for all the 50 schools put together is Rs. 30 lakhs. The recurring expenditure on salaries, materials and contingencies including the staff required for the unit in the Directorate of Education is estimated to be Rs. 60 lakh's per annum. 7.3

ACKNOWLEDGEMENT

The Working Group wish to express their appreciation and thanks to Shri S.R. Kapur, Education Officer, Directorate of Education, Delhi Admmistration and Shri Harpal Singh, Assistant Director of Technical Education, Directorate of Technical Education, Delhi Administration for their help in providing information and material required for the work of the Committee and to Shri N: K-Vyas, Artista College of Pharmacy, for his assistance,
