PREFACE

The Directorate of Economics & Statistics, regularly brings out various publications from time to time for dissemination of statistical data relating to different sectors. The "**Statistical Abstract-2011**," which is in your hands is the most important and comprehensive document of the Directorate of Economics and Statistics.

The Current issue of " Statistical Abstract-2011" is the 50th edition in the series and relates to the Calendar year 2009 or Financial/Agriculture/Co-operative year 2009-10 except wherever indicated. The publication contains five-year time series data for the state aggregate generally for 2005-06 and onwards, upto the latest available year with districtwise breakup of reference year. In this issue, for the benefit of the users, efforts have been made for the first time to provide brief analytical notes accompanying the tables.

This publication presents data from almost all the sectors of the state's economy. Attempt has been made to enrich the coverage and contents of the publication to cater to the felt needs of users.

The Directorate of Economics and Statistics is grateful to the various Central and State Departments /Agencies/ Corporations for providing data to DES for bringing out this issue. I would also like to place on record my deep sense of appreciation for the efforts put in by the officers and statistical staff of the DES who were instrumental in preparing this publication.

I hope this publication will prove useful for planners, policy makers, researchers and academicians.

Constructive suggestions for further improvement of the content and quality of the publication are welcome.

Notes: 1 For Census of India, 2001, in Urban Agglomeration it was, decided that the core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town and the total population of all the constituents should not be less than 20,000 (as per 1991 census), with these two basis criteria having been met, the following are the possible different situations in which urban agglomerations could be constituted-

- (i) A city or town with one or more contiguous outgrowths
 - (ii) Two or more adjoining towns with or without their outgrowths.
 - (iii) A city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Urban agglomerations/cities with a population of a million and above are known as metropolitan areas. For this classification the Urban agglomeration of 2001, has been treated as a single unit.

(3) ENVIRONMENT STATISTICS

TEMPERATURE - Observations of temperature of air in shed are recorded at most of the observatories twice a day at 08.30 and 17.30 hours IST. For this purpose there- mometers are installed at a height of 4 feet 6 inch above the ground in Stevenson screens which provide free access to the air but at the same time protect the theremometers from direct rays of the sun.

HUMIDITY - Relative humidity is the measure of water vapours present in the atmosphere relative to the corresponding amount for saturation. It is recorded at the principal observatories by standard record at 8.30 and 17.30 hours IST.

The temperature and humidity data has been supplied by Indian Meteorological Department, Jaipur.

RAIN FALL - Actual rain fall is recorded at the stations at 8.30 hour IST every day. The amount measured gives the rain fall of the previous 24 hours and the data is tabulated by the Board of Revenue (Land records), Rajasthan.

Normal annual rain fall is the average of rain fall data for the fifty years ending in 1950.

VITAL
STATISTICS

(4) VITAL STATISTICS

This chapter associated with vital statistics of Rajasthan State.

Table 4.1 :- In this table the data are based on the reports received from the medical and Health Department and compiled in the Directorate of Economics and statistics , Rajasthan with breakup of Male , female's causes of death. The maximum cause of death in 2007 is 5413 by certain conditions originating in the Perinatal period , while in 2008 it is 6620 by Diseases of the circulatory system.

Table 4.2 and 4.3:- Both tables are based on SRS Bulletin, published by registrar general of India, New Delhi, Estimated Birth rates, Deaths rates and Infant Mortality rates for the years 2008 and 2009 are presented in the table . The B.R.per 1000 population is 27.5 for the year 2008 and 27.2 for the year 2009 in the state . the D.R. per 1,000 population is 6.8 for the year 2008 and 6.6 for the year 2009. The I M R is 63 for the year 2008 and 59 for the year 2009 per 1,000 live Births. Again table 4.3 shows DR and IMR with breakup of Male,female and by residence Rural, Urban also.

Table 4.4:- This table presents status of districts in Birth and Death registration in Rajasthan. Highest Birth registration is 106.63 Percent in Jaisalmer and least in Bundi district which is 74.97%. On another side Death registration is highest in Ajmer 114.73% and least in Barmer 44.48% in the year 2009.

Table 5.5 :-The base year of this table is 2001 census and associated with child mortality by sex and residence.

In demographic notation, the probability of dying before exact age X is denoted as $q(X)$. The Brass type estimates are for $q(1)$, $q(2)$, $q(3)$, $q(5)$, $q(10)$, $q(15)$, $q(20)$. For child mortality, the estimates up to age 5 i.e., $q(1)$, $q(2)$, $q(3)$, $q(5)$ are relevant. These are based on mean children ever born and mean children surviving to women of ages 15-19, 20-24, 25-29 and 30-34 respectively at the time enumeration. The two terms, $q(1)$, which is the Infant Mortality Rate (IMR) in life table terminology and $q(5)$, Which is the Under Five Mortality Rate (U5MR), that is the probability of dying before completing five years of age , are most frequently used. It is customary to express these rates in terms of per thousand live births; thus $1000 * q(1)$ and $1000 * q(5)$ are given as IMR and U5MR respectively.

A word of caution is in order before the estimates are interpreted. In the Brass method, estimates of $q(1)$, $q(2)$, $q(3)$, $q(5)$ are independently obtained as these arise out of the report on proportion of children dead to women in the four age groups, 15-19, 20-24, 25-29 and 30-34 respectively. However, this no longer holds if graduation is adopted. Essentially, a set of four values is provided based on pooled information via model life tables. therefore estimates of , say, $q(1)$ and $q(5)$, should not be treated as two separate indicators of early childhood mortality, but rather collectively of childhood mortality.

AGRICULTURE

(13) AGRICULTURE

Data relating to the pattern of land utilisation, Area, production, and yield per hectare of principal crops, Index numbers of Agricultural area, production, productivity, agricultural machinery and implements, No. of operational holdings etc. is covered in this chapter.

OPERATIONAL HOLDINGS - This information of operational holdings by size of holdings and irrigation facilities was collected from all the villages at the time of Agriculture census in the year, 2005-06.

LAND UTILISATION - The main purpose of the table for land Utilisation is to indicate broadly the ways in which the land of the State is utilised. The classification of area was formerly available under five classes, which has been simplified to fall in line with standard classification as laid down by the Ministry of Food and Agriculture, Government of India.

REPORTED AREA - Reported area for land utilisation purpose is based on the returns of area estimates prepared by the Revenue staff of the state.

FOREST - The area shown under forest in the table on Land utilisation may not tally with that given by the Forest Department because (i) The Forest Department reports, forests worked out by the Forest Department while the table on Agriculture Statistics includes in addition, forest area administered by district officers and (ii) certain villages and other lands not covered by the forest but worked out by Forest Department as forest, are not treated as forest in the returns of Agricultural Statistics.

AREA NOT AVAILABLE FOR CULTIVATION - This stands for all land which is absolutely barren or uncultivable covered by buildings, Water or roads or otherwise appropriated for non-agricultural purpose Under sub-Head "Land put to non-agricultural use" is included land occupied buildings, roads, railways or under water and other lands put to uses other than agriculture while under the sub-head "Barren and un-culturable land" includes mountains, desert etc.

OTHER UNCULTIVATED LAND EXCLUDING FALLOW LAND - This denotes land available for cultivation but not taken up and includes culturable waste, permanent pastures and other grazing land and land under miscellaneous trees, crops and groves. The last one is that type of culturable land which is not included under area sown but is put to some agricultural use.

FALLOW LAND - It includes current fallow i.e. land which is left fallow during the current year only and other fallow land i.e. lands which were taken up for cultivation but are temporary out of cultivation for a period of not less than one year and more than 5 years.

NET AREA SOWN - Area Sown More Than Once and Total Cropped Area in computing the net area sown, area sown more than once have been counted only once under the head "Area Sown more than once" area sown with two and more than two crops in the same year is counted as many times as the crop is sown. Total cropped area is the total of net area sown and area sown more than once.

INDEX NUMBER -

COVERAGE : The present series of Index Numbers of Agricultural Production in Rajasthan covers 34 principal crops for which forecasts are issued by the Board of Revenue from time to time. These crops occupy major Portion of the gross sown in the State. These 34 crops are further sub-divided into two main groups, namely, food-crops and non-food crops and seven sub-groups, namely cereals, pulses, oil-seeds, fibres, spices & condiments, vegetables and others.

The data about the crops included for the preparation of index cover about 83 percent of the cropped area and as such the trends in their production are fair representation of trend of the entire agricultural production in the State.

BASE PERIOD - The base period for these indices has been changed from the triennium 1979-80 to 1981-82 to the triennium 1991-92 to 1993-94 considering the recommendation of the Economics & Statistical Advisor, Ministry of Agriculture & Irrigation, Govt. of India, Technical Committee on Index Numbers related to agriculture economy and of the technical committee on Prices & Cost of living. This is also reasonable period from the point of view of weather, Agriculture production and prices in Rajasthan.

WEIGHTS - Weights have been assigned to the different commodities in the same proportion which is the average value of its production bears to the total average value of production of all commodities during the period. The production has been valued at the annual harvest prices of the commodities prevailing each year during the base period.

METHOD OF CONSTRUCTION OF INDEX NUMBER - The percentage production relative for each crop for the current year has been calculated with the corresponding estimated production in the base period. To obtain group-level indices these production relatives have been multiplied with the weights of the respective crops. The aggregative of the products has been divided by the total weights.

The Concept of production utilised in the construction of index number is that of gross production of crops Revised estimates of yield for each year have further been processed as indicated above to get the estimates yield for which figures have been used for construction of the index number.

AVERAGE YIELD OF PRINCIPAL CROPS - It has been calculated by dividing production figures by area.

AREA AND PRODUCTION OF CROPS - The figures of area and production are given for principle cereals, Pulses and commercial crops. The area figures are compiled by the Board of Revenue (Land Records), Rajasthan from the Agricultural Statistical returns prepared by the Revenue staff. While the production figures for the state as a whole are estimated on the basis of crop cutting experiment results for Bajra, Maize, Jowar, Sesamum, Cotton, Groundnut, Sugarcane, Paddy, Wheat, Barly, Gram, linseed and Rape & mustard. For other crops it is calculated on the basis of average normal yield of past 10 years. For estimating different crops and remaining districts the estimates are only tentative. The total of the district tallies with the production for the State as a whole.

The figures as given are those based final forecasts, as well as those based on revised estimates as issue from time to time alongwith the final forecasts for the following year. The data relates to the agriculture year ending June.

AGRICULTURAL EQUIPMENT AND IMPLEMENTS - The figures relating to the Agricultural equipment and implements, actual use for 2003 are based on 17th Quinquennial Livestock Census. The data is compiled from Live Stock Census, 2003. Supplied by Board of Revenue for Rajasthan, Ajmer.

IRRIGATION

(14) IRRIGATION

The statistics of irrigation projects, schemes and area irrigated under different sources and total area of crops irrigated are shown in this chapter.

NET IRRIGATED AREA - The area irrigated from different sources represents the net irrigated area. If two or more crops are irrigated in the same year from the same source the area is counted only once.

GROSS IRRIGATED AREA - Total area irrigated under different crops represents the gross irrigated area and includes area irrigated under more than one crop during the same year. Area irrigated more than once in a single harvest is counted only once.

The data on irrigation by sources and crops is compiled by the Board of Revenue (Land Records), Rajasthan from the data contained in the Annual Agricultural Statistics Returns prepared by the Revenue Staff. The information on irrigation works is supplied by the irrigation department, Rajasthan. The data Contained in Table No. 14.1 (A to E) relates only to plan works in progress.

Table 14.1 (A) to 14.1 (E):- These tables are associated with financial and physical progress of irrigation projects and Schemes govern by water resources Department Rajasthan . Additional irrigation potential created during plan period highest is 5.06 l

Table 14.2:-This table gives information regarding districtwise net irrigation by sources during 2008-09 of the total 6245048 Hect. 25.35% from canals, 0.48% from tanks, 73.00% from wells and 1.17% from other sources are irrigated in the year 2008-09.

Table 14.3:-This table presents districtwise gross area of food and Non-food crops irrigated for the year 2008-09, which 52.47% food crops and 43.87% is Non- food crops irrigated area are recorded.

(20) ELECTRICITY AND POWER

The data on generation and consumption of electricity relates to both private and public undertakings in the State and excludes Military, Factory and Railway power stations. Electricity generated covers the total power generation in the State through steam gas, diesel and Thermal. Electricity purchased covers both from non-electric utilities and hydel power from adjoining States. The Data is obtained from Rajasthan Rajya Vidhyut Prasaran Nigam Limited, Jaipur, and Ajmer, Jaipur and Jodhpur vidyut Nigam Ltd. Rajasthan (All 3 Discom).

Table 20.6 relates to important physical achievements of Rajasthan Renewable Corporation, Jaipur.

Table 20.1:- This table supplied by coal controller, Kolkata relates with information of sectorwise consumption of coal and coal products from the year 2005-06 to 2009-10. Highest consuming sector is power 16926 (000'Tonnes) and lowest in textile/ Rayan is 34 (000'Tonnes), and total consumption is 18186 (000'Tonnes) in the state.

ECONOMIC
CENSUS

(34) ECONOMIC CENSUS**I. Introduction :-**

For making concerted effort in developing infrastructure for sound and reliable data basis particularly for the un-organised sectors of non-agricultural economy, a scheme on Economic Census and surveys was launched by central statistical organisation, Government of India, in the year 1976. Under this scheme the first Economic Census was conducted in 1977. The Second and Third Economic Census was conducted during 1980 and 1990 alongwith houselisting operations of population census 1981 and 1991 respectively. To get reliable and timely data, the Fourth Economic Census was conducted in June 1998 independently instead of linking in with houselisting operation of next population census. Similarly Fifth Economic Census was conducted during 16th may to 15th june 2005 independently in the State. In this census information regarding location of enterprises, description of activity, nature of operation, type of ownership, social group of owner, power/fuel used, the total number of persons and hired persons usually working in the agricultural (excluding crop production and plantation) and non agricultural activity were collected.

The Economic Census (EC) is the official count of all entrepreneurial units located in the geographical boundaries of the state, involved in any economic activities of either agricultural (Excluding crop production and plantation) or non agricultural sectors of the Economy, engaged in production and/or distribution of goods and/or services not for the sole purpose of own consumption.

(iii) Non-Agriculture enterprise : The non-agriculture enterprise is defined as the enterprise engaged in the activities other than agricultural activities.

(iv) Workers : The workers in an enterprise may consist of members of the household or hired workers or both.

(v) Activity of the enterprise : The activity of the enterprise may be carried out at one or more than one distinct location. The activity of the enterprise may also be carried out only for a part of the year but on a fairly regular basis i.e. it is in operation for the major part of season/year.

(vi) **Ownership of an enterprise** : An enterprise may be owned or operated by a single person or a single household or by several households jointly (on a partnership basis) or by an institutional body or by Government.
