SSA APPRAISAL MISSION TO EIGHT DISTRICTS OF MIZORAM

REPORT

(January 03-6, 2002)

Section I Introduction

1.1 The Appraisal Mission

The Government of India Team comprising of Dr. Arun C. Mehta & Dr. K. Biswal, NIEPA. New Delhi; Dr. K. Gupta & Dr. Kanan Sandhu, NCERT, New Delhi, and Dr. Subash Gujaria, Technical Support Group, Ed. CIL, New Delhi visited Aizawl from 3rd to 7th – January 2002 to appraise the elementary education plans of Aizawl, Lunglei, Champhai. Mamit, Kolasib. Serchhip. Saiha and Lawngttai districts of Mizoram. Mr. H.L. Thanliana, DEO, Saiha district and Ms. Zothanmawll. Lecturer. SCERT, Mizoram were the state representatives in the Appraisal Team. During their stay in Mizoram, the members of the Appraisal Team visited Aizawl and Kolasib districts extensively. The team met cross-section of people and officers of Mizoram and had useful discussions at different levels.

The Appearsal Team sincerely thanks, the Government of Mizoram and Shri F. Lahura, Director of School Education. Government of Mizoram for all arrangements, made during their stay in Aizawl. The Team also expresses its thanks to officers of the Education Department, members of the District Planning Teams, Head Masters, Teachers. Presidents & members of Village Education Committees, parents and students for their warm welcome and lively interaction

The Appraisal Team is also thankful to the officers of the Department of Elementary Education & Literacy, MHRD, New Delhi in particular to Shri Sumit Bose, Joint Secretary, and Shri Praveen Kumar, Director for their initial briefing and support during the mission to Mizoram.

2

The Mission Report is divided into six sections. Section I deals briefly discusses the educational profile of the districts. An attempt has been made in Section II to discuss the planning process under SSA in Mizoram. Section III examines the planning methodology and intervention strategies. Section IV deals with the interventions for quality improvement at elementary level of education. Brief report of our field visit is given in Section V. Comments and suggestions on eivilworks are given in Section VI.

1.2 Educational Profile

Mizoram is one of the seven sister states of the north-eastern part of the country having 0.89 million population in 2001 with a sex ratio of 885 females per 1,000 male population. The state capital Aizawl has the highest population (340 thousand) and the Champhai the lowest (38 thousand). Its literacy rate (88.49 per cent) is second highest in India with a male/iemale differential of about 5 percentage points. Barring Lawngttai district, all other districts have literacy rate above 80 per cent. Lawngttai district has a literacy rate of only 56.45 per cent, which is far below than the state average of 88.49 per cent. The sex ratio (901 females per thousand males) in Lawngttai is also lowest in the state. Four of its districts namely, Aizawl (96.64 per cent), Champhai (91.88 per cent), Kolasib (90.47 per cent) and Serchhip (96.13 per cent) have literacy rate higher than 90 per cent.

The state has a very log tradition of making available educational facilities as the first primary school in the state was opened as early as in 1898. Christian missionaries have played a significant role in creating and making available schooling facilities in the state. At present the state has a total of 745 primary and 540 upper primary schools; thus giving a ratio of upper primary to-primary schools 1: 1.38, which is far better than the ratio at the national level (1: 3.5). Most of its habitations have

got access to primary schools but the same is not true in case of upper primary schooling facilities, as still a tew habitations do not have access to upper primary schooling facilities. In 1993-94, more than 95 per cent habitations had primary schooling facilities within a distance of 1 km as against 89 per cent having access to upper primary schooling facilities within 3 km. The highest number of un-served habitations is in the hunglei district that has 38 habitations that do not have access to primary schooling facilities as compared to 91 habitations not having upper primary schooling facilities. The state also has a number of Anganwadi centers.

District	Population (In '000)	Literacy Rate	Sex Ratio	Nº of Habitati Without		Pupil-Teacher Ratio		Ratio of Upper
بې دوې دی. پې مې مې مې	annoar on analysin and manyor in the			Pry School	Upper Pry School	Pry Level	Upper Pry Level	Pry School to Pry School
Aizawl	339	96.64	954	υ	26	18	12	1.53
Lunglei	137	84.2	922	38	91	18	23	1.33
Champhai	38	91.88	955	2	19	29	10	1.43
Mamit	62	80.08	902	7	19	20	8	1.80
Kolasib	61	90.47	913	8	13	19	9	1.57
Seichhip	55	96.16	952	1	71	21	13	1.49

Mizoram	891	88.89	938	67	267	20	13	1.60

Table 1.1: Basic Educational Indicat	ors of	Mizoram
--------------------------------------	--------	---------

Source: State Component Plan, Mizoram

The state has a favorable teacher-pupil ratio, both at the primary (1:20) and upper primary (1:13) levels of education. The average number of teachers per primary school is about four, and all the primary classes have at least one teacher. Upper primary schools are better placed in both the average number of teacher as well as teachers per class. However, a large number of primary and upper primary teachers

4

are under-qualified and also untrained. The percentage of female teachers is about 40 and 26 respectively at primary and upper primary levels of education. The survey that has been conducted reveals that a large number of schools do not have minimum infrastructure facilities both in the primary as well upper primary schools.

The estimated number of out-of-school children is about 29 and 31 thousand respectively of age group 6-11 and 11-14 years. The GER and NER at the primary and upper primary levels in 1997-98 was about 114 and 73 per cent respectively but attendance rate was far below than the enrolment ratio. However, the dropout rate is comparatively high at 62 per cent at the primary level, thus affecting the efficiency of education system. On an average, a child is taking about 6.3 year to become primary school graduates. However, the transition rate from primary to upper primary level in Mizorain is above 90 per cent and that is true for both boys and girls.

Section II

Planning Process

This section deals with the process of formulation of perspective as well as annual **District Elementary Education Plan (DEEP)** under the SSA in eight districts of Mizoram. Besides, an attempt has been made in this section to briefly discuss the organization of Household Survey in these districts in August 2001 as one of the pre-project activities to facilitate development of district elementary education plans in Mizoram. The comments and suggestions given in this section are based on data and information provided in the perspective and annual plan documents and discussions with state as well as district level officers on 4th January 2002. Some of the comments and suggestions are also based on field observations and data and information gathered during through discussions with primary and upper primary school teachers; community members, particularly members of Village Education Committee (VEC) & Village Development Committee (VDC), Young Mizo Association (YMA), Young Miso Women Association (YMWA), School Education Committee (SEC); representatives of NGOs and other grassroots level organizations; circle, block and cluster level officials; teachers of recognized and unrecognized schools; and parents during field visits to Aizawl and Kolasib districts on 4th, 5th and 6th January 2002.

2.1 Orientation and Pre-project Activities

To start with, in Mizoram, orientation programmes on Sarva Shiksha Abhiyan (SSA) have been organized at state and district levels before planning and implementing pre-project activities. However, details of such programmes have not been given in the plan documents. Druing this phase of planning process three major activities have been implemented, which are as follows:

- (i) Formulation of *Mizoram Sarva Shiksha Abhiyan Rajya Mission Rules in 2001* to facilitate coordinated implementation of SSA;
- Formulation of Core Groups at state, district, eircle, cluster and village levels, and Planning Teams at state and district levels; and
- (iii) Organization of *Household Survey* in all districts in August 2001.

Formulation of *Core Groups* and *Planning Teams* at state and district & sub-district levels and organization of household survey have greatly facilitated the process of formulation of DEEP in the state. Specifically, in the absence of reliable time series secondary data on various aspects of development of school education in Mizoram, household survey has helped create a database for plan formulation at the district level. *Besides, organization of household survey in August 2001 in Mizoram has also facilitated the process of conscentization of the community about the SSA, and as a result, it has contributed to the process of participation of the community, teachers, NGOs and other grassroots level organizations/institutions in the plan formulation process.*

However, during the pre-project phase, many important interventions have not been implemented because of lack of funds. Specifically, there was a delay in transferring funds from the Department of Finance to the Department of Education, Government of Mizoram to implement the pre-project activities. Even the household survey has been conducted in August 2001 using the available funds (other than SSA funds) with the Directorate of School Education, Government of Mizoram. The Department of School Education has however received the pre-project activities about a month before the Appraisal Mission visited the state from $A^{\mu\mu}$ to α^{μ} January 2002. As a result, many important activities have not been implemented during the pre-project phase. Some of such activities are:

- (i) Baseline studies to assess the level of learners' achievement;
- (ii) Orientation and conscentization programmes at sub-district and village levels;
- (iii) Formation of resource groups and planning teams at circle, cluster and habitation levels;
- (iv) Strengthening of state, district and sub-district level offices for education;
- (v) Redeployment of teachers, both at lower and upper primary levels,
- (vi) Interventions for assessing the contribution of related departments such as welfare, tribal development, rural development, health, etc. (i.e. convergence efforts) for development of Early Childhood Care and Education (ECCE), Informal Education (IE) and Elementary Education; and
- (vii) Training programmes/workshops for formulation of DEEP, particularly for the educational functionaries at the sub-district levels.

It may be noted that the plan documents do not detail out the activities undertaken during the pre-project phase. Similarly the plan documents also do not mention the expenditures incurred on pre-project activities. It is expected that the plan documents should discuss, at least briefly, the contribution of the pre-project activities and/or database created during this phase in the plan formulation process. The plan documents are not explicit on this.

2.2 Formation of Core Groups and Planning Teams

Under the Mizoram Sarva Shiksha Abhiyan Rajya Mission Rules, 2001 core groups have been formed at state, district, circle, cluster and

village levels to facilitate planning and implementation of the SSA. Planning teams have been formed only at state and district levels. In the absence of planning teams at sub-district levels, circle, cluster and habitation plans have not been developed in Mizoram. The core groups however are mainly responsible for implementation of SSA interventions at various levels.

Specifically, in Mizoram, a Core Committee has been formed at the state level and Core Groups have been formed at the district and subdistrict levels. There is also a State Monitoring Committee in Mizoram The Chief Minister of Mizoram is the President of this committee and the Minister for Education and Human Resource Development is the Vice President. The Director of School Education, Government of Mizoram acts as the Member Secretary of this Committee, A State Executive Committee has been formed having the Chief Secretary, Government of Mizoram as its Chairman, the Secretary, and Department of Education Human Resource Development as its Vice chairman and and Commissioners of other Departments, Directors/Joint Directors of SCERT and other nominated officials of the State Mission as its members. The State Executive Committee mainly administers the affaura of the State Mission for the SSA

The members of the District Core Group are the officials of related government departments; representatives of Teachers Service Associations, NGOs, YMA; and prominent persons of the locality. The Deputy Commissioner of the district acts as the Member Secretary of the Core Group. At the circle level, the Block Development Officer/President of the Village Council is the Chairman of the Circle Core Group and the Circle Education Officer is the Member Secretary. The Core Group at the circle level consists of the representatives of Teacher Service Associations, YMA, YMWA: Chairman of each cluster; President of Village Councils; representatives of PTAs; Coordinators of ICDS and IED, and the CAEO concerned. Further, each circle is divided into a number of clusters, each consisting of two or more villages. The President of the Village Council at the cluster level is the Chairman of the Cluster Core Group/Committee and the Headmaster of the largest upper primary school in the cluster is the Member Secretary. The members of this group/committee consist of representatives of YMA, MHIP, PTA and all heads of institutions/schools of the cluster.

Village Core Group and Village Core Committee have been formed in all villages of Mizoram. This group consists of President of the Village Committee (as Chairman), cleadmaster of the upper primary school (as Member Secretary), representatives of YMA, MHIP, MUP, PTA, teachers, and parents, members of VEC, etc. as members. The Core Groups at the sub-district level, particularly at the village/habitation level have played a very important role in developing the DEEP. The village level core groups have facilitated school and community contact programmes, which have been launched in the state to gather feedback from schools and the community for evolving appropriate intervention strategies for development of elementary education.

2.3 Household Survey and Development of Database

In Mizoram, household survey has been conducted in August 2001, the findings of which have mostly formed the basis for preparation of perspective as well as annual plans in all districts. In the household survey, parents, community leaders, members of Village Councils, teachers and local level educational functionaries had participated. Structured schedules were used to collect data and information from households, Village Councils and schools. Accordingly, three types of instruments (i.e. Household Schedule, School Schedule and Village Schedule) were used in the survey.

Teachers of primary and middle schools were appointed as Field Investigators. The community members assisted the Field Investigators in identifying households and facilitating the interactions with heads of households and other community members. In July 2001, training programmes were conducted at the block level to train the teachers for household survey. Each teacher was given the responsibility of canvassing 50 to 100 households in the cathchment area of his/her school. The household survey was conducted in the state from 14th to 28th August 2001.

Data and information collected through the household survey were consolidated at village/habitation, cluster, circle and district levels. The database thus generated by the survey, to a large extent, helped the District Core/Planning Team to develop perspective and annual plans for UEE. Data generated through household survey have been manually consolidated and analysed. This is perhaps one of the reasons as to why the District Planning Teams have not made the best use of available data and information. Household survey being the regular activity under the SSA, there is a need for computerization of such data and information in Mizoram.

2.4 Plan Formulation Process

The plan formulation process in Mizoram was participatory. As has been mentioned earlier in this section, after the household survey in August 2001, awareness drives and community contact programmes were organized in Mizoram at cluster and village/habitation levels in September 2001. This helped gather qualitative information on problems and issues of elementary education at the local level. In fact, VECs submitted, in writing, specific problems and issues of schooling in their villages and schools. This further strengthened the database already developed through the household and school surveys in August 2001.

In Mizoram, bottom-up approach has been adopted to develop DEEP. The level of participation of the community, particularly the members of the VEC and the YMA, was relatively quite high in the plan formation process. Prior to introduction of SSA in Mizoram, community involvement in developmental activities at local level was very high. The community contact programmes under the SSA further strengthened the school community linkages

After the formation of Core Groups/Planning Teams at various levels, the members of these groups were trained by the State Resource Team in Aizawl from $12^{m} - 13^{m}$ July 2001 to develop District Elementary Education Plans. It may be mentioned that the district education plans in Mizoram have been developed mostly on the basis of data and information generated through the household survey in August 2001. However, habitation, cluster and cucle level plans have not been developed in the state, though data have been consolidated at these Moreover, the findings of the analysis of data at the circle level levels. have not been shared with the community members, particularly with the members of VECs and Village Councils. Perceptions of disadvantaged groups, women, minorities, parents, teachers, NGOs, the church and other local level organizations have been taken into consideration, especially in diagnosing the educational situation and evolving local specific strategies.

Consultations with related departments, NGOs and other grassroots level organizations have been made in the process of formulation of perspective and annual plans at the district level. The draft district elementary education plans have been shared and discussed at state and district levels only before finalisation. In all,

12

efforts have been made in Mizoram to ensure participation of the civil society organizations, particularly the community, parents, teachers, administrators, NGOs, YMA, YMWA, the church and other stake-holders in the process of development of perspective district elementary education plans and annual work plans under the Sarva Shiksha Abhiyan.

2.5 Some Observations

The district elementary education plan formulation process in Mizoram was participatory. It was based on primary data and infermation generated through household and school surveys. Largescale community contact programmes had been conducted prior to plan formulation in Mizoram. However, following are some of the suggestions to further make the planning process more participatory and effective:

- Given the geo-physical features of the state and mobile population in some of the districts, there is a need to undertake household survey every year;
- Based on the findings of the survey, the *Village Education Register* may be prepared in each habitation;
- In the household survey, instead of teachers, members of YMA and/or YMWA, particularly young educated may be involved for further strengthening the school-community linkage and to raise the level of participation of the community in the planning process;
- Data and information thus generated from household and school surveys may be computerized;
- Habitation, cluster and circle level plans may be prepared, which should ultimately form the basis of developing the DEEP;
- The findings of the analysis of data at habitation, cluster and circle levels may be shared with the community;
- There is a need for participation of the private sector, particularly the Church, in the planning process; and
- More awareness and community contact programmes may be implemented for effective planning, implementation and monitoring of SSA

Section III

Planning Methodology and Intervention Strategies

This section looks into the planning methodology and proposed intervention strategies both in the perspective as well as annual plans of Mizoram. Specially, the attempt here is to examine the data utilization and presentation, target setting, and intervention strategies

3.1 Data Utilization and Presentation

All the eight plans are entirely based upon household, village and school surveys, which were conducted in these districts in August 2001. Except data on literates, no other statistics from any other source are presented in the plans. However, the documents contain background information that includes location map of the district. The facilities available in schools are adequately presented in most of the district plans.

Whatever little statistics, presented in plans are not adequately analyzed and utilized to evolve local specific strategies. Barring pupilteacher ratio, not a single indicator is used to analyze the situation with regards to access, enrolment, retention and quality of education. The basic indicators, such as, Gross Enrolment Ratio and Net Enrolment Ratio and Dropout and Retention Rates have not been utilized. However, figures in absolute numbers (like out-of-school and number of dropout children) have been presented with little analysis. Presentation and analysis of data at disaggregated levels have not been given adequate consideration. A few districts have presented grade-specific enrolment. But, the same is not at all analyzed. The primary level in Mizoram consists of Grades I to IV, and that the upper primary, Grades V to VII. The state may like to consider Grade VIII students in order to cover all children up to the age 14 under the SSA.

14

Many districts have only a few out of school children and the statistics that have been presented also suggest that the number of dropout children is also not very high. However, the procedure adopted in estimating dropout rate is not correct, and hence needs refinements. The districts should have used statistics over a period of time to work out retention at the end of primary and elementary levels of education as well as grade to grade transition rates. Therefore, as it seems that quality of education is the major concern across eight districts. But, since the baseline assessment study is not conducted in any of the districts, it is not known what is the achievement level both at the primary and upper primary levels of education. It may, however, be noted that, barring one district, the amount released by the Government of India to carry out pre-project activities has not yet been transferred by the State Government to any of the districts. Once the money is released, the districts should initiate the pre-project activities so that the same would form the basis of developing perspective plans

The focus of the plans in all the districts are however on primary education and upper primary education has not been given adequate attention. Indicators such as graduation rate and transition from primary to upper primary level have not at all been used. In the absence of necessary indicators, it is difficult to assess the status of upper primary education as well to fix realistic targets on different aspects of education. The districts should also have a separate section on convergence within the education department and between different departments. They should also present details of ongoing schemes along with their proposed activities in years that follow. This is not at all has been mentioned in any of the district plans.

Needless to mention that in case of few districts, tables have not been numbered, titles are not clear, source of information not mentioned and lot of repetition has taken place. In many tables, only absolute numbers are presented without analysis. In the light of the above, the districts in their perspective plans should present the following set of statistics:

- They should explore all possible sources, such as, District Census Handbooks, publications of Directorate of Education, Mizoram, All India Educational Survey etc. to analyze the educational development;
- Wherever necessary time-series data should also be presented to examine trends in variables like enrolment and population;
- In view of the above the district teams should ensure that each and every table presented should have the number, unit and the year for which data is presented as well as the source of information and the consistency of data presented should be maintained throughout the plan documents;
- Each district should ensure to present data for all of its blocks/circles and also at the district level in their revised document;
- The district team should also ensure that the data presented is adequately analyzed and the strategies formed are based upon the analysis of data presented; and
- The district teams should give adequate attention to both the primary as well as upper primary levels of education.

Specifically, the following sets of data need to be presented in the plan documents:

- Total population, by sex and rural and urban distribution and percentage of SC/ST population (up to 2001 Census);
- Number of physically challenged children and child workers;
- Break-up of age specific child population at present and projections in future years, by which the goal of UPE (say year 2007) and UEE (2010) is to be achieved;
- Total number of habitations: number of habitations having primary and upper primary schooling facilities as per the distance &

population prescribed in state norms. Availability of non-formal education centres, number of un-served habitations (as per the state norms) both with regards to availability of primary and upper primary schooling facilities;

- Male/female and rural/urban literacy rates in 2001;
- Growth of primary and upper primary schools over a period of time and ratio of primary to upper primary schools. Number of private unrecognized schools;
- Physical and infrastructure facilities: number of primary and upper primary schools according to availability of school buildings and type of school buildings, building-less schools, distribution of schools according to number of instructional rooms and according to major and minor repairs and need of additional classrooms. This should be presented for the latest available year. Most of the plan documents contain this information but need to present it separately for primary and upper primary level;
- Ancillary facilities: distribution of schools according to drinking water and toilet facilities and separate toilet facilities for girls,
- * Total, boys' and girls' enrollment in primary and upper primary classes during last 3 years. Encollment ratio, separately for boys and girls, out of school children (current year) and grade-wise enrollment.
- and repeaters in classes I to VIII during last two years. Number of disable children in schools and enrolment in private unrecognized schools;
- Fercentage of over-age and under age children in Classes I to V & VE VIU:
- Retention rates (boys and girls) at primary and upper primary levels of education, grade to-grade dropout, promotion and repetition rates separately for boys and girls both at the district and block levels and also at the primary and upper primary levels of education;
- Number of primary school graduates: completion rates separately in case of boys and girls;
- Transition rate from primary to upper primary level; and.

• Number of teachers (male and female) over a period of time, pupilteacher ratio at primary and upper levels of education and distribution of schools according to number of teachers.

3.2 Target Setting

Perhaps the most significant limitation of the district plans is lack of seriousness in setting targets. Some district plan documents even do not mention targets and those which mention do not cover all the four components of universal elementary education. None of the districts have adopted district and block/circle specific targets. Not a single district has set separate targets in case of boys and girls and also for primary and upper primary level of education. All the districts have developed perspective (budgeted for 10 years) as well as detailed plan for the last three months of the present year. But annual targets on any of the components of UPE/UEE are not at all set out. In the absence of annual targets it will be difficult to monitor progress made on different components of UEE over time.

The education system is expected to receive continuous flow of children through Grade I. The district teams at least should have analyzed the entry rate that gives idea about coverage of child population (6+) in the system. This is more so important because the district has decided to enroll all children of age '6+' by 2003. Even the districts have not projected clientele population in 2003 and 2007, the years by which they intend to achieve UPE & UEE respectively

Districts have adopted SSA target years as it is through which they intend to bring back all left out, never enrolled and out-of-school children under the education system by 2003, achieve UPE by 2007 and UEE by 2010. The districts have reported that they have provided access to most of the habitations and they have only few out-of-school children. The districts are not expected to take so many years to bring all of them under education system. A few of them may achieve the goal well before 2010, and the rest of them may not achieve even after 2010. Had the diagnosis exercise been effective, it would have helped the district planning teams to set realistic targets. Since annual targets have not been set, the strategies are based upon the perception of the district teams, as FGD across districts have not taken place.

The best way to set realistic targets is through population and enrolment projection techniques, which have not been attempted in any district plan document. The present status of educational development along with demographic and enrolment projections will help district teams to adopt district-specific, and within district, block/circle-specific targets on different aspects of UEE. The districts can also use information collected from household survey to project clientele population in years that follow or they should extrapolate the past population data to project it in the future. Applying enrolment projection techniques based on 'student cohort' analysis, enrolment can be projected at the district and block/circle levels. Depending upon the availability of grade-specific enrolment and number of repeaters in different grades, Grade Ratio/Grade Transition method should be applied to project emolment at the primary level. The projected enrolment in Grade V and the transition from primary to upper primary level should be used to project enrolment at the upper primary level. The enrolment projection techniques will also help districts to fix realistic targets on retention/dropout rate.

In the light of the above, the planning teams in their perspective plans should give adequate attention to targets, which should be linked to educational development and population and enrolment projection techniques. Needless to mention that targets specified in the SSA guidelines are indicative in nature. The targets so adopted should be district-specific and within district circle-specific and separately in case of boys and girls and for both primary and upper primary level of education. They should also ensure to set annual targets and on all the components of UPE/UEE, such as access, enrolment, retention and quality of education.

and the second second

Section IV Interventions for Quality Improvement

In a state like Mizoram, where the participation rate is around 95 per cent, the major task under SSA is to bring about improvement in the quality of elementary education. The interventions related to the quality improvement are relatively difficult to plan and implement. The State has already implemented some of the pre-project activities such as household survey, community based micro-planning, etc. On the basis of these activities, the state has proposed some interventions to address the issue related to quality improvement at the elementary level of education. The proposed interventions have been discussed in the following sections.

4.1 Access

Since one of the objectives of SSA is to bring all children to schools, Education Guarantee Centres. Alternate Schools, Back-toschool camps by 2003, the Appraisal Mission agrees to opening of new primary and upper primary schools in habitations which are not having any schooling facility. Also, it is agreed that, in some places, the upgradation of existing primary schools to upper primary schools may be carried out. Further, there is a need to open Early Childhood Education (ECE) Centres.

The Mission observed that some districts have proposed new primary schools while others have not proposed. Almost all districts have proposed for reinforcement of schooling facilities. Additional rooms have also been proposed in both primary and upper primary schools. A primary school in Mizorane imparts education up to IV standard while upper primary education up to VII standard. As per the SSA framework, children up to the age 14 years should be covered for compulsory education. Therefore, the Mission observes that primary level in Mizoran should have classes I to \forall . The Upper Primary schools should have classes from VI to VIII standard. If need be additional room may be provided in the existing schools.

4.2 Teacher Training

Since teachers are the most important actors in the education process, their empowerment and competency are significant factors. which must be taken into account for the provision of quality education. In Mizoram, the teacher-pupil ratio is quite satisfactory, both at primary and upper primary levels. However, many teachers do not have the minimum academic qualifications and required training. It was observed from the district plans as well as from the field level interactions that a good number of teachers do not possess the required qualification -i.e. matriculation at the primary level and graduation at the upper primary Even the inservice training programmes are not conducted level The Mission therefore proposes that all untrained regularly. teachers to undergo training for 60 days; all new-recruits to be provided orientation training for 30 days; and there should be inservice training programme of 20 days duration at regular intervals for all primary school and upper primary school teachers. This will help updating teachers regarding the knowledge of new methods of teaching instead of following only the traditional methods. It will also update them in the content areas as well. The existing DIETs need to be activated. The Mission recommends that at least one training programme may be conducted during this financial year.

4.3 Teaching-Learning Materials

Majority of children drop out because of poverty. Currently, there is no provision for free textbooks and uniforms at the elementary level of education. Parents' inability to provide uniforms and textbooks is one of the major reasons explaining high dropout rate in Mizoram. The Mission therefore recommends that provision may be made to provide free textbooks and exercise books as well as at least 2 sets of uniforms for all SC/ST children, children from poor households and girls in the age group 6-14.

The Mission observes that it will be advisable for the state to develop teaching-learning materials like teachers' guide, workbooks and supplementary reading materials. These activities may require identification of subject experts, orientation of writers and reviewers through a series of workshops.

The teacher grant of Rs.500 per teacher per year may be provided to all primary and upper primary school teachers for developing suitable teaching learning materials to enhance their professional efficiencies for suring effective classroom transactions

4.4 Revision of Curriculum

Since the existing curriculum is found to be overloaded and irrelevant, the Mission recommends that seminars and workshops for resource persons and teachers may be organized to seek the suggestions for making the existing curriculum more realistic and more relevant to the present society, keeping in view the cultural in lien.

4.5 Infrastructure Facilities

For ensuring enrolment and retention of children of 6-14 year age group, infrastructure facilities available in schools also play a vital role. The Mission observed that many schools had semi-pucca building and a good number had kucha building. Most of the schools neither have toilets nor any drinking water facility. Many of the schools do not have any proper furniture. None of the schools, which the Mission visited, had any provision of sports equipments like swings, sea-saw, slides etc. not even in primary schools. Therefore, all needy schools may be given grants in accordance with their requirements as per SSA norms.

4.6 Supervision and Monitoring

The SCERT and DIETs in Mizoram need to be activated to take up academic monitoring of schools and provide support/training to teachers of primary and upper primary schools. Since there are only 2 DIETs for the whole of Mizoram, there is a need for DIETs in all the districts of Mizoram. District Resource Group may visit the schools to keep a track of the progress of various schools and provide guidance.

At the circle level, support for monitoring may be given by the Circle Education Officer assisted by three Cluster Resource Persons. They shall monitor the schools and classroom practices and provide guidance to the teachers.

4.7 Early Childhood Education

Many districts have proposed for Anganwadis and ECE centers Care should be taken to establish ECE centers where the existing Anganwadi centers are not sufficient. If possible, ECE center may function in school premises.

4.8 Education for Disabled

Some district plans have mentioned a number of disabled children in schools. The Mission agrees with the demand for creating facilities for mainstreaming disabled children.

4.9 Community Mobilization

The Mission observed that community participation is high in schooling activities in the state. At many places, the President of Village Council interacted with the Mission members. They appraised the buission about requirement of additional schools. They also demanded facilities of drinking water, toilets and teaching learning materials. The cooperation of the Village Council is appreciated by the Mission. However, the community was not actively involved in the household survey conducted by the education department. There is a need to activate Village Education Committee for planning and monitoring of the programmes.

Section V Field Visit Report

In this section, an attempt is to summarize the findings of the field wsits of the Appraisal Team to Aizawl and Kolasib districts of Mizoram The report of the field visit is based on data and information gathered through discussions with community leaders; members of Young Mizo Association and Young Mizo Women's Association: members of Village councils and Village Education Committees; teachers of both government managed and recognized private schools; representatives of NGOS: local level educational functionaries as well as functionaries of other related departments; District Education Officers; Circle Education Officers; members of the District/Circle/Village Core Teams; and Deputy Commissioner of concerned district. Also, relevant data and information have been collected through observations of the conditions of primary schools and other relevant field conditions. Specifically, the objectives of the field visit to Aizawl and Kolasib districts were

- (i) Fo assess the level of participation of the community, teachers and other stake holders in the process of development of District Elementary Education Plan.
- (ii) To understand better the grassroots level schooling processes in Mizoram;
- (iii) to identify local specific problems and issues of development of elementary education; and
- (iv) To provide relevant comments and suggestions to revise the perspective plans on elementary education on the basis of observation of field level conditions in the state.

With the above objectives, the Appraisal Team visited several villages and schools located in Aizawl - II and Kolasib Education Circles from 4th to 6th January 2002. Details of the places/schools visited and

the meetings held during the field visit are given in Table 5.1. Table 5.2 provides the basic data and information about the schools visited by the team in Aizawl and Kolasil) districts.

Date	School/Village Visited	Meetings and Discussions With

Kaifang		1	65	 the community Yet to be taken over by the government It has one voluntary teacher No basic infrastructure facilities and teaching-learning materials Out of the community contributions, the school building has been constructed and the voluntary teacher's salary is met. School established in 1999 Most of the infrastructure facilities in the school have been created out of the community contributions. Toilet and drinking water facility not available Teaching learning materials not available Upgradation of qualifications of teachers and in service training required Dropout children are few in the school
Government Middle School-1, Keifang	3 2	5 3	110	 School building under construction School established in 1976 Toilet and drinking water facility not available No electricity connection Inadequate infrastructure facility In service training last received in 1996

On the basis of its field level observations and data and information gathered from discussions with various community level organizations, teachers, local level functionaries, parents, member of YMA and YMWA, the Appraisal Team makes the following observations:

• Community in the state is well aware of the SSA. However, except teachers and select members of VEC, the participation of other community level organizations in the planning process is limited;

- The local community is also aware of the household survey conducted in the districts in August 2001;
- In Mizoram, the walls of most of the schools are made up of bamboo cretes (*Mau Thumba*) and some schools have asbestos and tin roofs. These buildings are not permanent. Usually, the walls of the school buildings are replaces in every two to three years;
- In the construction of school buildings the contribution of the community is high;
- In most of the schools visited by the team, infrastructure facilities were inadequate;
- Particularly, number of classrooms in these schools is inadequate and schools do not have basic facilities such as drinking water and separate toilets for girls;
- Teaching-learning materials are not found in most of the schools visited by the team;
- The size of the primary as well as upper primary schools in terms of enrolment is relatively small in the sate. As a result, the teacher-pupil ratio is also small at elementary level of education;
- Underqualified and untrained teachers are found in many primary and upper primary schools;
- In the state, there are only two DIETs. As a result, quite a number of teachers have not received in service training for many years;
- Dropout is not a major problem in the schools visited by the team. Similarly the number of out-of-school children in the catchment area of these schools is also very small;
- Poverty is the main factor explaining dropouts at the elementary level of education. Provision of free textbooks and uniforms will, to a large extent, reduce the number of dropouts from primary and upper primary schools;
- In the state, coverage of relevant age group population is not a problem. However, the quality of education at elementary level need to be improved;
- In the planning process, focus may be given to upper primary level of education;

- In general, school-community linkage is very strong in Mizoram;
- There is a scope for building partnership between government and privately managed schools;
- The state has already decided to take over the deficit schools. This will facilitate convergence of efforts to achieve the SSA objectives;
- There is a need for improvement of physical infrastructure facilities and provision of teaching-learning materials in the schools;
- Given the topography of the state, the norms provided under the SSA for establishing new schools and upgradation of existing primary to upper primary schools may be relaxed in Mizoram.
- The ratio of upper primary to primary schools is quire high in the state; and
- * There is a need for more community contact programmes to raise the level of awareness and participation in the SSA

 A second sec second sec

Section VI

Civil Works

The Mission observed a lot of variation in unit costs of new primary schools across districts. Two factors should be kept in mind in this respect:

- Buildings in Mizoram are traditionally 'Assam type' buildings with bainboo crete walls and CGI roofing – The cost of such buildings would be around Rs.200/sq.ft
- Most of these schoolless habitations are sparsely populated habitations and a school is likely to cater to 20-25 students only. The districts would, therefore, need to construct smaller school buildings. Each school can have 2-rooms and a verandah with a total area not exceeding 500 sq. ft - this can easily accommodate about 50 students. The cost of such a construction should therefore, not exceed Rs 1 lakh / school.
- * It is, therefore, recommended that the unit cost of new primary schools be restricted to a maximum of Rs.1.5 lakh/school taking into account additional transportation charges in all districts.
- The first year plan should only target for construction of new primary schools in school-less habitations and circle resource centers Few upper primary schools (upgraded) may also be provided toilets and drinking water facilities
- Circle and cluster resource centers being an inmediate requirement, constructions can be taken up in the 1st year. However, as per the SSA norms, cluster resource centers are to be used as an additional classroom also. It is, therefore, recommended that cluster resource centers be designed as an additional classroom in the existing schools with a unit cost not exceeding Rs.1.5 lakh.
- The unit cost of an upper primary school, wherever approved, should not exceed Rs.2.5 lakh. Traditional systems of 'Assam type' buildings may be followed.
- Toilets and water supply facilities may also be approved for the 1st year the unit costs for these are found to be reasonable.

.

Apart from the comments on the 1st years' work plan, the districts may also take into account the following observations while preparing the Perspective Plans:

- Repairs and renovation should be given the highest priority. An 'Assam type' building can be fully renovated to a reasonable good condition with the investment of around Rs.1.5 lakh.
- A detailed back up on the requirement for additional classrooms needs to be provided. This would include the number of students, the number of rooms in the existing schools, classroom space available per child and additional space required (average space requirement in primary level is 8 sq.ft per child).
- A detailed micro planning exercise is required to identity primary schools that need to be upgraded to upper primary schools. This would depend on the existing state norms as well as the number of primary graduates available. Schools, which are identified to upgrade, should also have adequate space to construct three additional classrooms.
- Designs of primary and upper primary schools, as well as additional classrooms should be functional and child friendly. These should also be based on locally available materials and technologies.
- Additional rooms for teachers, common room etc. at the primary level are not permitted as per SSA norms.
- Construction of DIET building is not support by SSA. It should be accessed from the Govt. of India DIET scheme.

Remarks

- New schools have been recommended only in those habitations which don't not have any type of schooling facility - either govt, or private. In case of habitations which have only private schools, the state has been advised to open EGS centres, which can be upgraded into regular schools subsequently.
- 2. Upper Primary Schools has been recommended where the norm of 1:2 is satisfied only by taking into account both Govt. and Aided schools.
- 3. School and teachers grant and teacher training has been recommended for Govt. and aided schools, while maintenance grant has been recommended only for govt, schools.
- 4. Research and evaluation have been given based on actual demand made by the state. However, it is less than that eligible as per SSA norms of Rs. 1400/- per school.
- 5. In Mizoram, circle is the educational administrative unit and not the block, which is slightly larger. This year we have recommended interventions for block level only and not at the circle level. However, since the block is not an educational administrative unit circles may be treated akin to blocks and for the remaining circles, BRCs may be considered next year.
- 6. Not of villages is less than half of that of not of schools, but VECs have been constituted village wise leading to more than one school for each VEC. The present sanction has been made VEC wise but the state may examine the feasibility of having school-wise VEC.
- The state has asked for vehicles at circle level which is not eligible as pernorms. However, with absence of public transport and difficult terrain we may think of examine the feasibility of sanctioning motor cycles next year.
- 8. Free text books have been given taking into consideration 90% of total enrolment. While the entire population of Mizoram is ST, separate ST enrolment figures have not been given by the state. Also the state has been providing text books to around 10000 very poor families till 1999 2000. The 90% figure would take care of this free distribution by the state and also any non SC/ST family which may exist in the state. Also, the state is advised to ensure that free text books distribution is limited to Govt., local bodies and aided schools.
