# The Grant-in-aid Code of the Tamil Nadu Educational Department

## CHAPTER I—INTRODUCTION.

1. *Preamble*—A sum of money is annually set apart to be expended under these rules as grants-in-aid of recognized educational institutions under private management with the object of extending and improving secular education, and such grants will be given impartially and without reference to any religious instructions to all schools which impart sound secular instruction, subject to the conditions hereinafter specified and with due consideration of the requirements of each locality, and of each institution and of the funds available. Provided that grants shall be withheld from institutions which refused admission to any pupil merely on the ground of the caste or community to which he belongs, provided also that no grant of any kind shall be paid to a new institution or in respect of a new department or course in an existing institution which has been opened without the previous consent of the Director.

These rules do not apply to Anglo-Indian Schools or to Primary including Adult Literacy Schools which are aided under separate rules.

Such refund may be made either by adjustment in any other grant payable to the school or in such other manner as the Government may see fit.

(iv) In cases where the managements of aided educational institutions (other than primary schools) do not pay dearness allowance at Government rates to the staff under their control, the Director shall carry out investigation into the financial position of the institutions and if, after such investigation he is satisfied that the managements can afford to pay the allowance at Government rates shall direct the managements concerned to pay the allowance at Government rates. If even after the issue of such a direction

the managements receiving grants from State funds do not pay the allowance at Government rates, the grant payable to them may be withheld either in full or in part. The refusal of the payment of the allowance at Government rates by managements which do not earn any teaching/staff grants may be considered as a valid reason for the withdrawal of recognition.

## APPENDIX—LL.

## (Chapter VIII, Rule 52.)

INSTRUCTIONS AS TO THE SANITARY AND HYGIENIC AND HYGIE-  
NIC REQUIREMENTS TO BE OBSERVED IN THE DESIGNING AND  
CONSTRUCTION OF SCHOOL BUILDINGS IN THE STATE OF  
TAMIL NADU.*Selection of sites*

In the selection of site the following points should be weighed against considerations economy convenience, proximity to houses of parents, etc.—

(i) A site should not be selected if its natural position is in a hollow or in the neighbourhood of high trees, or houses which prevent the free circulation of air and the access sunlight to the school buildings. Shady trees are, however, of value, in THE PLAY GROUND, provided that they do not unduly reduce the space available for play and are not planted so close to the school buildings as to obstruct the entry of light into the class rooms, or in course of time, to cause damage to the structure.

(ii) Made soil should be avoided and, as far as possible all soils which are specially retentive of moisture.

(iii) Sufficiency of space is important, and in this connexion the possibility of future extension and the necessity of giving subsequent class rooms the proper orientation should be born in mind.

(iv) Channels and tanks in the vicinity are a disadvantage.

(v) The presence of rank vegetation, more especially prickly-pear, is objectionable.

(vi) The neighbourhood of trusty and noisy roads and of shops or factories should, far as possible, be avoided.

2. All site plans should show the nature of the surroundings, the height of the neighbouring buildings, the north point and the direction of the prevailing wind.

## ORIENTATION OF BUILDINGS.

3. This will differ for different parts of the State and will depend chiefly on the best way secure perfilation of air. Subject to this the more buildings are lighted from the north the better.

## FLOOR SPACE.

4. When funds are available, they should be utilized in providing floor space in excess of the following MINIMUM requirements ;—

For Elementary Schools	.. .. .	0·88 square metres.
For Secondary Schools	.. .. .	0·99 square metres.
For training colleges and technical schools.		1·40 square metres.

Rooms which are intended to be used for practical work, such as laboratories, drawing room, workshops, etc, should be carefully designed with a view to the nature of the work and the number of students to be accommodated.

## COMPOSITION OF FLOORS.

5. It is desirable that the floors should be made of a material which will admit of there being washed with water. Stone flagging or something better must be aimed at in rooms where desks or benches can be provided. Where the pupils have to sit on the floor, stone floors need not be insisted on if objected to. At the same time it must be recognized that from the hygienic point of view they are to be preferred and objection on the score of their coldness can be met by providing boards or mats. But where this is done, the greatest care must be taken to ensure that the mats are kept scrupulously clean.

**SEATING ARRANGEMENTS.**

6. The general principles which should govern the construction of desks are set forth in Annexure (i). Where dual desks are used, the desks may be arranged most suitably as shown in diagram, Annexure (ii).

7. Forms without backs and desks are objectionable; type designs for desks are issued by the department.

8. Pupils should be seated in rows with the main light falling from the left side; they should never face the light. The same remarks applies to the teachers.

**WINDOWS.**

9. Windows serve two purposes—

- (a) Admission of light.
- (b) Admission of air.

10. They should be placed at regular distances so as to ensure uniformity of light.

11. Window sills should not be more than 12·20 d.m. from the ground in rooms in which the scholars are seated at desks. When pupils sit on the floor the sills should come to within 7·60 d.m. or 9·10 d.m. of the floor level. Windows for subsidiary lighting may have their sills more than 12·20 d.m. from the floor.

12. The window area should not be less than one-fifth of the floor area and whenever possible the principle lighting should be from the north.

**DOORS.**

13. Class rooms should not have to be used as passages from one part of the building to another. They should consequently not open into one another but into passages or verandahs. No class room should have more than two doors and in most cases one is preferable. The door or doors should be at the teacher's end of the room.

**HIGHT OF CLASS ROOMS.**

14. The minimum height of the rooms in Secondary Schools, Training Colleges and Technical Schools constructed with ground floor alone and with ground floor and first floor with terraced or sloping roofs should be as indicated below:—

	<i>Height between floor level to the bottom of floor slab or roof slab.</i>	<i>Height between floor level to the bottom of the beam in the case of sloped roof.</i>
1. Single storeyed building having terraced or sloped roof.	36·60 d. m.	33·55 d. m.
2. Double storeyed building having both ground floor and first floor terraced or first floor with sloping roof.	36·60 d. m. below floor in ground floor and 33·55 d. m. between floors in the first floor.	Height of bottom of the beam from top of floor in the case of sloping roof in first floor 33·55 d. m.

In the case of Elementary Schools the height of room should be 10' to the bottom of the beam in the case of sloping roof and 11' upto the underside of the roof slab in the case of terraced roof.

(G. O. Ms. No. 1454, Education, dated 17th August 1964.)

**VENTILATION.**

15. Unless there are windows reaching to the top of the wall and capable of being opened, ventilators are necessary near the top of the wall. The ventilators should be regularly distributed in the same way as the windows. For each pupil 48 square inches of open ventilator should be provided.

## DIMENSIONS AND FITTINGS OF CLASS ROOMS.

16. It is important that no school or class room should be more than 7·30 metres in width or otherwise the rows of pupils will be too long to be properly controlled by the teacher. The length of a room must depend on the number of classes to be held in it. In the case of a school divided into a number of class rooms, the dimensions of any room should not exceed 7·30 metres  $\times$  7·60 metres, that is, an approximate square. If it is admitted that a square is the best area for teaching purposes the length of a class room in a one-roomed school should approximate closely to some multiple of the width. Ample wall black-board space should be provided especially on the wall at the teacher's end of the room which should be unbroken by door's windows or cupboards. Cupboard recesses in other walls should be provided also recesses with open shelving. Rails under the cornice for hanging maps, pictures and diagrams are essential. The smallest class room for 40 boys in dual desks should be 6·40 metres wide and 7 metres long. The arrangement of such a room is shown in the enclosed diagram No. C.A. 306 of 1917, Annexure (ii). To accommodate similarly desks of larger dimensions those of the room must be proportionately increased.

## ROOFS.

17. The roof should, as far as possible, be impervious to heat.

## SANITARY ARRANGEMENTS.

18. Latrines should not be placed nearer than 12 metres to any school building. They should be so situated that the prevailing wind will not blow from them in the direction of the school.

19. The type designs of the sanitary department should be consulted when planning latrines.

20. For boy's schools separate urinals and latrines should be provided. Separate accommodation should in all schools be provided for the teaching staff.

21. The number of latrine seats should be on the following scale:—

	<i>Girls.</i>	<i>Boys.</i>		<i>Girls.</i>	<i>Boys.</i>
Under 30 children ..	2	1	Under 150 children	6	3
.. 50 .. ..	3	2	.. 200 .. ..	8	4
.. 70 .. ..	4	2	.. 300 .. ..	12	5
.. 100 .. ..	5	3	.. 500 .. ..	20	8

22. In addition there should be urinals for boys at the rate of six urinal compartments each 51 cms. wide for every 100 boys, or if separate urinals are not provided the number of latrine seats should be correspondingly increased.

23. If the flush-out system of latrines is in vogue, the number of water closets should be on the following scale:—

<i>Number of pupils.</i>	<i>Scale of water closets.</i>		<i>Number of pupils.</i>	<i>Scale of water closets.</i>	
	<i>Girls.</i>	<i>Boys.</i>		<i>Girls.</i>	<i>Boys.</i>
25	1	1	150	6	3
50	2	1	200	8	4
75	3	2	300	12	5
100	4	2	500	20	8

In additional provision should be made for urinals at 6 per 100 boys.

NOTE—It is not intended that all classes should be applied in the case of elementary schools in preparing these for elementary school buildings only such points as refer specially elementary schools are applicable to all classes of schools should receive an attention.

## ANNEXURE (1)

The requirements of suitable desks and seats are that the pupil should sit with body fairly vertical for writing and be able to lean back for reading without any danger of curvature of the spine in either case. He should not stoop or lounge or sit in any way, askew, and the book or paper should rest at a comfortable distance below his eyes.
