#### APPENDIX "C"

. . .

#### APPENDIX "D"

 General Letter no. V.E.6/XXVII—36(3), dated the 13th April, 1933, issued by the Director of Public Instruction, United Provinces, containing instructions to Sub-Deputy Inspectors of Schools for the preparation of maps showing distribution of schools in district board areas ... 107A--111A.

2. Report on compulsory primary education for boys in Allahabad District .. 112A-117A.

#### ANALYSIS OF CHAPTERS

#### CHAPTER I-INTRODUCTION

Bulget figures for vernacular education prior to 6½ per cent. cut. Necessity for cut. Alteternative proposals by boards. Government views on small and uneconomical schools. Reference to Allahabad survey. Reference in the Hartog report and in the Kichlu report to tithe need for concentration. Survey work in Madras Presidency. Champion report. Actition in the Punjab.

#### CHAPTER II-THE MAPS AND THE STATEMENTS

The maps—Orders for preparation. Value to a board. Suggestions for permanency, renewal and improvement.

Statements --Statistics collected. Tables showing the state of schools, staff, buildings, commpulsion, female education, etc.

#### CHAPTER III-SUPERFLUOUS AND UNECONOMICAL SCHOOLS

Superfluous schools. Numbers of institutions versus AREA and POPULATION. Haritog figures in this connexion. Common view that one mile is a reasonable distance. References to Acts and District Board Educational rules. Over-crowding. Instances from District Board areas: Allahabad, Ballia, Etawah, Meerut. Instances from Surajpur and Lubharpur compulsory areas. 'Instances from Municipalities. Reasons for enforcing reduction 1 in numbers of schools. Suggest new rules for future opening of fresh schools.

#### UNECONOMICAL SCHOOLS

What constitutes literacy. Reference in Harrop and Hartog reports. Census proof. Faildure to achieve literacy in our schools. Wastage and Stagnation. School histoory of sample schools. Inflated enrolment in infant class; causes. Inefficiency of single teacher schools. Plea for special cases of single-teacher schools. Mr. Kichlu's proposals to abbolish the small school. Effect of the 64 per cent. cut on numbers of schools and staff. Propose of the efficiency of big schools serving a wide area. Other causes of inefficiency. Difference between economy and retrenchment. Remedies against waste. Fees. Admission 1 once per year. Two teacher schools. Two mile walk. Curtailment of enrolment. Demnand for a guarantee of stay in school till the end of class II as a minimum. Conditions in M4alta. Compulsory attendance in place of compulsory education. Aided schools.

#### CHAPTER IV-TRAINING OF TEACHERS

Number of teachers: trained and untrained. Wastage. Training institutions. Failuare of district boards to train their staff. Central training schools. Suggestions for moree of these. Need for stipends. Obligation laid on district boards to train staff. Need for 33eparate provision for training of teachers. Suggest 2 per cent. provision. Need for clear ordebrs on admission to training classes.

#### CHAPTER V-SCHOOL BUILDINGS

1 Details of school buildings. Schools without a building. Failure of district boards to keep) pace with enrolment. New buildings. Failure to provide for maintenance. Inability of boards to find funds for new buildings. Inequalities in Government grants to district boarcds. Proposal to distribute Rs.3 lakks recurring to deserving boards for erecting buildings. Low figures for repairs. Need for a rule compelling provision of money for repairs. Shorttage of hostels. Need for supervision of new building schemes. Inadequate equipmentt: suggested obligatory provision.

#### ( vi )

#### CHAPTER VI-COMPULSORY PRIMARY EDUCATION

History in Municipalities and in District Boards. Expenditure. Reports on working of compulsion. Action on those reports. Poor results of compulsion : Bareilly, Moradabad, Lucknow, Sitapur, Allahabad, Agra. Reasons for poor results. Suggestions for improvement. Need for extensive revision. New post in Director of Public Instruction's office to look after compulsion.

#### CHAPTER VII-FEES

Government resolutions on fees. District Board educational rules on fees. Experiments with free primary education. Proof that fees do not keep boys from school. Suggestions that all boards shall charge fees. Fee scale. Exemptions. Increases in income. Use of this additional income.

#### CHAPTER VIII-CLOSURE OF SCHOOLS

Resumé of tour. Method of scrutiny adopted. Numbers of schools to be closed. Savings: Method of retrenching teachers. Suggestions for utilization of savings. Need for expenditure on vernacular middle education.

#### CHAPTER IX-GIRLS' SCHOOLS

Figures: Comparison of expenditure on girls and on boys. Enrolment. Low efficiency and high cost. Causes of waste. Uneducated teachers. Bad school buildings. Co-education proposed as a remedy. Figures. Opportunities in country schools. Need for training women. Special recommendations prior to introduction of compulsion forgirls.

#### CHAPTER X-SCHOOLS FOR SPECIAL CLASSES

#### DEPRESSED CLASS EDUCATION

Expenditure. Enrolment. Fall in enrolment in those schools. Views of Hartog report and Wetherill committee. Possibility of abolition. Need for caution. Low efficiency of depressed class schools. Recommendations for future action in this connexion. Need for provision for training depressed class teachers.

#### ISLAMIA SCHOOLS

History. Enrolmont. Variation in provision of Islamia schools. Tuition and equipment good.

#### MAKTABS AND HINDU PATRSHALAS

Rules under which these work. Rules for grant-in-aid. Enrolment. Low efficiency of teachers. High cost of Hindu pathshalas. Difference between the maktab and the Hindur pathshala. Increase in Hindu pathshalas since 1926. Rivalry between Urdu and Hindii. Need for provision for Urdu teachers. Proposal to close inefficient maktabs and pathshalass. Pathshalas being run by societies. Need for alteration in the rules establishing Islamiia schools.

#### CHAPTER XI-MISCELLANEOUS

District board education offices. Variation in cost of administration. Suggestions for standardization of district board education clerical staff.

Proposal to retire teachers at 55 years of age. Need for extending provident fund to all confirmed teachers. Power of chairmen, education committees to grant extensions of service.

Irregularities in grade promotions.

Need for definition of special repairs.

### Report on primary education for boys and girls in the United Provinces of Agra and Oudh with special reference to uneconomical and superfluous schools

#### CHAPTER I

#### INTRODUCTION

IN 1918-19 the yearly recurring grant given by Government to district boards of the United Provinces for vernacular education was Rs 14 lakhs out of a total expenditure of Rs.30 lakhs, the remaining Rs.16 lakhs being contributed by the boards themselves. A scheme of expansion of vernacular education was initiated in that year. Bv 1922–23, when the official chairmen of district boards were replaced by non-official chairmen, the Government grants for vernacular education had jumped from Rs.14 lakhs to Rs.63 lakhs. These latter grants were based on (i) a three-years' programme of expansion undertaken by Government involving an expenditure of Rs.21 lakhs without putting any additional burden on the boards, (ii) the scheme of expansion of vernacular middle education for boys, which was complementary to the above scheme of expansion of primary education, (iii) revision of the pay of district board vernacular school teachers, which cost nearly Rs.21 lakhs recurring and was borne by Government, (iv) expansion of primary education of girls and amongst the depressed classes, and (v) a scheme for further expansion of boys' primary education, etc. These grants were all given on the condition that the amount to be given to each board in any one year would be the amount required to enable it to work up to the cost of its scheme in that year less the amount that it failed to expend from the recurring grant in the previous year. In 1924 the system of contract grants was started. Savings were allowed to remain with the boards and were allowed to be credited to the education funds for the respective sub-heads of vernacular education to be utilized on educational projects. Schools failed, however, to develop so well as had been expected. Expenditure had increased fourfold, but the boys in schools had increased by some 28 per cent. only. The late Mr. K. P. Kichlu was put on special duty in August, 1924 to examine-

(1) how the present expenditure on primary education could be made to yield better results; and

(2) how far it was possible to introduce compulsion in rural areas and with what limitations.

2. In his report, which was published in 1925, he called attention to the wastage in the primary stages and suggested remedies. He advocated that compulsion should be introduced in district board schools on a permissive basis as had been done for municipal schools in 1919. As a result of his report the United Provinces District Boards Primary Education Act was passed in 1926. A further report on primary education was submitted by Mr. H. R. Harrop in 1926. He laid stress on the large numbers still to be enrolled, and outlined a scheme based on the needs of each individual board for financing an effort to get  $3\frac{3}{4}$  additional lakhs of boys into the primary schools in five years. Meantime improvements had been effected, especially in the vernacular middle schools; agriculture, manual training and rural knowledge were introduced. Non-recurring grants amounting to Rs.9,19,090 for buildings were made to boards and recurring grants to enable them to introduce these fresh subjects swelled the total expenditure which in 1929-30 reached the figure of Rs.1,09,00,000 (Rs.73 lakhs from Government and Rs.36 lakhs from the boards).

In the year 1931-32 the fall in prices and the general depression 3. reduced Government revenue from Rs.13 crores to Rs.11 crores and necessitated retrenchment in all branches of administration. In G. O. no. 721/XV-1249, dated the 12th March, 1932, district boards were told that they should curtail their expenditure on ordinary and compulsory primary education for boys by a flat rate cut of  $6\frac{1}{4}$  per cent. on the minimum expenditure prescribed by Government for the above two sub-heads. The Government order indicated the methods by which most easily this cut could be effected, viz. abolition of uneconomical schools, reduction of grants to unsatisfactory schools, reduction of staff in schools which were found to be overstaffed, and reduction in the contingent expenditure. The  $6\frac{1}{4}$  per cent. cut gives Rs.4,51,650 per annum of which Government share is Rs.3,02,605 and that of the The Government order, however, suggested boards Rs.1,49,045. that where boards found themselves unable to make the  $6\frac{1}{4}$  per cent. cut on the lines set forth, they might submit their own proposals for effecting the cut. Several boards proposed to cut the pay of the teachers, the cut being flat or graded and varying from half an anna to one anna on the rupee. The reasons given for this method of making the cut were :---

(a) the educational need for retaining the established schools;

(b) the fall in grain prices which, in the opinion of the boards, justified the cut, inasmuch as the teachers' purchasing power remained unimpaired;

(c) the distress likely to ensue, if numbers of schools were closed and teachers thrown out of employment;

(d) the ease of effecting such a cut.

The proposals of boards were submitted to Government and were generally accepted.

4. While it was realized that the closure of schools was attended by a certain amount of difficulty owing to local opposition and individual needs, Government were inclined to think that a great deal of real expansion could take place by a readjustment of existing educational expenditure. It seemed certain that a survey of schools would reveal numbers of small or superfluous schools, the expenditure on which could better be devoted to maintenance of other schools. Government, therefore, resolved on a scrutiny of the distribution, the enrolment and efficiency of the existing vernacular schools and accordingly Director of Public Instruction's G. L. \* no. V.E. 6/ XXXVII—36(3), dated the 13th April, 1933, was issued instructing the sub-deputy inspectors of schools to prepare maps of their circles, and on 20th November, 1933, I was placed on special duty to summon at the circle inspectors' headquarters conferences of the inspectors, the assistant inspectors, the deputy and the sub-deputy inspectors of schools and the chairmen, education committees of districts boards, to examine—

(i) the existing facilities for vernacular education and for the training of teachers for schools in rural areas of each district with a view to making specific proposals for improving the distribution of schools and allotment of staff, and for maintaining an adequate supply of trained teachers according to the needs of the district, and

(ii) to examine the existing provision for equipment and repairs of district board vernacular school buildings.

I was also required to visit districts where a discussion of the problems on the spot was likely to be helpful; to discuss with the officers concerned on the spot the schemes of compulsory primary education for girls in rural and urban areas, and, if possible, the working of the schemes of compulsory primary education for boys with a view to see how the present allotment for the purpose could be made to yield better results and how the defects in their working could be removed.

5. The superfluous and uneconomical school has long been a problem to those interested in education in India. The Hartog Committee's report (page 70) says—

"It is very improbable that a multiplication of schools on the lines which have been generally adopted is resulting in a corresponding output of literates; the opening of more small and under-staffed schools has often resulted in an increase of waste."

"There is a grave danger lest the continuance of the almost valueless schooling, such as the children receive in the majority of single-teacher schools, will convert the parents into active opponents of education."

Mr. Kichlu in his report has said : "The district boards are maintaining a large number of primary and preparatory schools in which the enrolment is very small. These uneconomical institutions are an expensive luxury and are at present the cause of much waste of public funds."

An inquiry into the distribution and location of primary schools had been made in respect of the Allahabad district, which showed that some villages with a population of 1,000 and over had no schools, while, on the other hand, other villages with a population ranging between 100 and 200 had schools—some of them more than one school located in them.

\* Printed in appendix "D"

6. The problem has been engaging the attention of the authorities in other provinces. The Government of Madras appointed Mr. H. Champion, I.E.S., to report on the possibility of consolidation and concentration of elementary schools. He stated his aim as—the creation of schools containing full classes of 30 pupils and the employment of one teacher in not more than one class. Mr. Champion's scheme for establishing large central schools with an enrolment running up to 1,000, including girls, depressed classes, Muslims, and Hindus, is outside the range of practical politics in these provinces. Even in district board areas under compulsion it would be difficult to find areas where within a radius of 3 miles so many pupils would be forthcoming, and even were they forthcoming, the district boards have neither schools adequate for such numbers, nor have they funds to build such a central school.

7. In the Punjab in 1932 it was noted that sufficient care and foresight had not been shown in selecting the place for a new school. Schools were too closely placed or had been opened in sparsely populated areas where adequate enrolment was not possible. Local bodies found it difficult to meet their obligations. The Education Department therefore resolved on a scrutiny of schools not obviously successful. The number of pupils in average attendance per teacher was fixed at thirty-five and where a full approximation to this proportion was not achieved the transfer or amalgamation of the school was to be considered. No primary school (up to our class III) was to be within two miles of another and no lower middle school (up to our class V) within less than three. Tn considering grants for aided schools the distance from a school maintained by the local body was fixed at not less than one and a half miles and the average attendance at thirty-five before the existence of the school could be justified. Grants for schools not complying with these conditions were to be disallowed,

#### CHAPTER II

#### THE MAPS AND THE STATEMENTS

1. The survey of the vernacular schools was conducted by means of maps compiled by the sub-deputy inspectors in the district. Imstructions for the compilation of those maps were issued in G. L. no. V.E. 6/XXXVII—36 (3); dated the 13th April, 1933. Every school maintained or aided by the district board was shown and its enrolment. Different symbols were used for different types of schools. The map is a visible statement of the state of education in the district. The scale—1 inch to the mile—is excellent affording sufficient room for all necessary entries while keeping the maps within reasonable dimensions. Many of the maps shown to me were exceedingly well drawn.

2. One or two boards in the Lucknow circle have combined the separate maps of the sub-deputy inspectors into a complete district map. This practice I commend to all boards. Such a map is of great service to the chairman of the education committee and to the deputy inspector. The district register of schools is a cumbersome volume. It takes an appreciable time to trace down any particular school. I had constantly to wait while volumes were being turned over to give me information about schools. Here on the map the salient particulars about a school are immediately visible—site, surroundings, type, enrolment. With such a map in front of the chairman the annual proposals should be simple.

3. I suggest to the chairmen some improvements that can be made—

- (1) all the schools should be named;
- (2) the letters should be block capitals in Roman type;
- (3) the enrolment figure each year should be entered in ink of a different colour. Thus for three years the progress of a school can be indicated;
- (4) at the end of three years a fresh map should be prepared and the old one put in the record room.

4. The map alone does not furnish sufficient information for a survey of the schools in a district. Statements were, therefore, collected of all the important features of primary and middle education. The most important of these are reproduced in appendix "A." A special form was issued later collecting information on the working of compulsory primary education in municipalities and district boards. It has not been found feasible to print this, but the form furnishes valuable information, especially in the five-year classwise enrolment in primary schools showing to what extent compulsion is getting the boys through the classes.

## CHAPTER III

#### SUPERFLUOUS SCHOOLS

1. A school which can be abolished without detriment to the efficiency of education in its vicinity is superfluous. Statistics are of some value here. A school serves (a) an area, and (b) a population. In the United Provinces the District Boards have 17,839 primary and preparatory schools for boys of all kinds for an area of 106,248 square miles and a population of 44,823,561. This gives a school to 6 square miles and 170 boys of school-going age. Similar figures for other provinces are quoted below from the Hartog Report, tables XXVIII and XXIX :

				Boys of school-going age per primary school	Area served by a boys' primary school
					Sq. miles
Madras			• •	63	- 3
Bombay	••		••	115	10
Bengal		••		88	<b>2</b>
Punjab	••	••	••	266	17

For 1931-32 the figures are :

		Area served by a boys' primary school in square miles	Boys of school- going age per school	Enrolment per primary school
India	••	 6.5	100	<b>41</b>
Madras	••	 3.0	<b>62</b>	41
Bombay	••	 9.5	110	67
Bengal	••	 1.8	74	34
United Provinces		 $5 \cdot 4$	162	55
Punjab	••	 18.0	286	68

2. Serving a circle 1 mile in radius a school serves some 3 square miles. If the radius is  $1\frac{1}{2}$  miles the area is 7 square miles, for a 2-mile circle the area is 13 square miles. If from the area of the United Provinces we deduct Kumaun with its 13,722 square miles and its sparse population of 1,370,000 we have 92,526 square miles to serve and a population of 43,454,000. Taking 7 square miles to the school we need 13,200 schools to which we must add the 800 existing in Kumaun, say, 14,000 all told. On a basis of 10 square miles (as in Bombay) we need only 10,000 all told. But our full primary schools number 9,230, while the combined primary and preparatory schools is manifest and it is this overcrowding which is militating against the efficiency of our schools.

3. The Piggott Committee aimed at one full primary school to every 25 square miles. Their demand would be met by some 4,000 full primary schools. Feeder schools were to send boys to those primary schools after passing Class II. \* In 1918, however, district boards were told that no inelastic rule of distance should be observed in locating new schools, whether primary or preparatory, and that the only criterion should be the local effective demand with the object of at least doubling the number of scholars attending primary schools and, if necessary, doubling the number of schools.

New schools were opened without due consideration of site, staff, and efficiency. Results have not been commensurate with our expectations. We have many boys in school, but we have little education. Provision iar in excess of the need has been made and there are at least 3,000 superfluous schools in these provinces.

Any attempt at reduction in the number of schools by abolishing an existing school or transferring it to a distance is usually countered. by the remark "But the little boys of tender age cannot walk so far." I do not accept this contention. To begin with : the protest ignores the fact that the school will be close to the residence of the bulk of the pupils. Those who have to walk 11 miles to school will be few. Next, the boys can and habitually do walk considerable distances, especially country boys. Young children just able to walk are put in charge of goats and walk miles daily. Anyone who has seen the village fair knows how many children trek in with their parents from the surrounding villages. In Scotland the distance up to which compulsory attendance at school may be enforced is 3 miles and the age is 5 years. The Piggott Committee said "We propose to locate, as far as possible, one primary school within walking distance of every village; but seeing that the needs of smaller boys will be met by preparatory schools nearer to their homes, we think it not unreasonable to extend the meaning of the term 'walking distance' for the older boys who will attend the upper classes of primary schools to cover a limit of about 3 miles." Is it then unreasonable to expect in India a boy of 6 to walk  $1\frac{1}{2}$  or 2 miles, especially when it is clear that the physical exertion is not beyond his ability? The dangers from wild animals, from kidnapping, or badmashes have been impressed on me. One has, however, to remember that boys generally travel to and from school in groups, which fact largely discounts those dangers. The important factors to which consideration must be given are the intense heat of April and the condition of the roads in the These are real difficulties, but after making allowances for rains. methods of meeting them, such as early school, fixing the holidays at a suitable time, etc., I am persuaded that it is not unreasonable to expect a boy of 6 years to walk 2 miles to school. I repeat that the demand will be far from usual. About 90 per cent. of the boys coming to school will be within 1 or  $1\frac{1}{2}$  miles of the schools left after the reductions in Chapter VIII have been effected.

5. The provisions of the District Board Educational rules in this connexion should be borne in mind. Rule 50 states: "The board shall, as soon as its resources permit, maintain a primary school within accessible distance of every village. The board shall, therefore, divide the area of the district into as many primary circles as will

<sup>\*</sup>Government Resolution no. 768/IX-3649, dated the 8th November, 1918.

secure this, and shall establish in each circle at least one school teaching the full primary course as soon as the opening of upper primary classes is justified by the attendance from the lower primary classes established within the circle. It shall maintain a list of the primary circles as a programme for the ultimate establishment of primary schools, and shall communicate the list to the inspector." This careful cutting up of the district into circles and the allocation of one full primary school per circle has received inadequate attention in almost every board. There is no planning of schools to feed an area. The list of circles should now be furnished as required by the rule. The corresponding section from the United Provinces District Boards Primary Education Act (Act I), 1926, says :

"Any one of the following eircumstances shall be deemed to be a reasonable excuse within the meaning of section 7 (of the above Act): that there is no accommodation in a recognized primary school within a distance to be fixed by the school committee and measured according to the nearest route from the residence of the child."

The distance one mile is specifically laid down in the United Provinces Primary Education Act, 1919 (Act VII of 1919) for municipalities which says :

"Any of the following circumstances shall be deemed to be a reasonable excuse within the meaning of section 7: "that there is no recognized primary school within the distance of one mile by the nearest route from the residence of the child."

In the District Boards Primary Education Act a "school area" is defined as : the area within a radius of one mile by the nearest route from the primary school maintained by the board and included within the local limits of a board.

6. It is from this last definition that there has sprung up the prevalent idea which was repeatedly presented to me—"a school at a distance not greater than one mile." Many persons referred to the Piggott Committee report asking for a primary school within walking distance of every village, their idea of walking distance being a mile. Several chairmen of education committees have stated that they felt it was their duty to multiply schools and bring the school as near to the home of the boy as possible.

7. From this attitude has arisen the vast array of inefficient preparatory schools, which is largely responsible for the waste and stagnation in the initial stages of education. Practically no board has said "A little, and good." The boards as a body have said, "As many schools as our funds will permit." As a result, areas, where schools are in excess of the need of the locality, can be found in most districts. Appendix "B" shows such areas; map no. I is in Allahabad District and has 30 schools for 50 square miles; no. II from Ballia with 38 for 50 square miles; no. III from Etawah with 27 for 50 square miles; no. IV from Meerut with 33 for 50 square miles. When one sees on a map the distribution of these schools and the lack of reasoned planning, the case for reduction in numbers becomes overwhelming.

8. Overcrowding of schools is not confined to ordinary district board areas. It exists in the areas where compulsory primary education is enforced, areas where one might expect special attention would be paid to the distribution of schools. In Laharpur Tahsil, District Sitapur, we have an area of 187 square miles under compulsion and 69 schools : an average of one school to 2.7 square miles. At Surajpur in the Bara Banki District we have an area of 95 square miles with 40 schools. As a result the schools are largely small and inefficient. I quote the enrolment of 12 taken seriatim from the Laharpur area: 167, 77, 83, 49, 61, 71, 34, 93, 46, 55, 95, 41. Ten small schools in the compulsory area in Bara Banki have the following enrolment : 33, 40, 48, 44, 39, 29, 65, 57, 47, 27. Clearly education cannot flourish with these inefficient units.

9. Nor is superfluity of schools confined to district boards. The condition in the municipalities is generally worse than in the rural areas. I reproduce a map of a portion of Bareilly Municipality—Appendix "B", map no. V—showing the distribution of schools there.

No attempt has been made to allocate schools to areas, but all kinds of inefficient schools have been countenanced and financed where they were not really required. At Mahoba, a tahsil town in District Hamirpur with a population of 13,164, the following institutions are maintained or aided by the district board :

				E	Inrolment
One middle vernacular s	chool	••	••	••	59
Two primary schools	••	••	••	• •	281
" preparatory school	3		••	••	68
One Islamia school		•••	••		33
" maktab		••	••		63
" pathshala	••	••	••		29
"girls' school	••	••	••		

Clearly the village is over supplied with schools.

10. Mr. Mayhew, in his book "The Education of India ", page 233, says: "It will be seen then that the increase in expenditure up to 1900 was the result of opening schools or providing more regular or better instruction for those who wanted education; the more rapid increase since that date has been due to a genuine and determined but hardly effective attempt to popularize education among classes that do not want it. The annual cost per pupil has risen from Rs.5 to Rs.8 as. 2, and if the present system is continued, the cost will grow steadily as schools and classes become smaller."

11. The superfluous school has arisen owing to lack of regulations dealing with the opening of schools. At present the chairman, education committee, is empowered, under paragraph 166A(a) of the United Provinces Educational Code, to recognize a primary or preparatory school. A deputation from a village approaches him, a member of some party in the board urges the claim, a wealthy or influential person in the village represents the desirability of a school in a village and. usually the school is opened. No survey of the needs of the village is obligatory, no question of pupils permanently likely to be

enrolled, no scrutiny of the schools in the neighbourhood, no provision for the building or finance of the school. Till recently the chairman of the education committee was not obliged to consult the deputy inspector who is most capable of advising on the need for opening a school. He acted on his own responsibility and until G. O. no. 887/ XV-1066-1933, dated the 22nd March, 1933, was issued it was not unusual to find him acting without consultation.

For vernacular middle schools the recognizing authority is the 12.inspector of schools of the circle. His recognition is given after scrutiny of the various points laid down in paragraph 166A-(b) of the Educational I recommend that a new rule be inserted in the Educational Code. Code requiring the chairman, education committee, tosatisfy A form of proposal for the opening or recoghimself in like manner. nition of a school should be prescribed. It should demand from the proposers information of the type laid down in the Educational Code, paragraph 166A(b). The deputy inspector of schools should be required to report on the proposal, commenting on the information submitted and should give his views on the need for the school. The report should then go before the chairman, education committee, for orders. No school should be opened or recognized without such procedure.

When funds 13. Schools have been too easily opened in the past. to open schools ran low, other funds were diverted. Funds meant for training of teachers were pushed into maintaining unnecessary schools. Provision for maintenance and repairs of buildings has been reduced till the schools are unsightly and unsafe. Money for equipment has been gradually reduced till the school furniture is a disgrace. The boards have on their hands a plethora of schools far in excess of their needs and far beyond their abilities to maintain in repairs and effici-Moreover, new buildings are now being provided only from ency. savings in the special sub-heads of the education budget. The multiplication of schools leaves inadequate savings and new school buildings are not being built.

Another potent factor creating superfluous schools is the demand for segregate schools. The Islamia school and the maktab were countered by pathshalas which in 1926 sprang into being in large numbers. Schools for depressed class boys have added to the confusion.

14. I have, therefore, to propose that the suppression of superfluous schools shall be systematically carried out. For the first time, the overcrowding has been revealed and over 2,500 of the superfluous schools have been recommended for abolition. The inspector of a circle is expected to tour in the interior of two districts yearly. I suggest that when on such tour he be required to meet the chairmen of the education committees of those two districts and scrutinize, as was done by me, the school maps of the districts with a view to eliminating the superfluous and uneconomical school. This will ensure a scrutiny every fourth year which should suffice. In his report to the Director of Public Instruction he should mention what action he has taken to suppress superfluous and uneconomical schools.

#### (11)

#### UNECONOMICAL SCHOOLS

15. A school is designed to confer literacy upon those who undertake the courses provided. A school which fails to make literate its students or which does so at an excessive cost is uneconomical. Most of the preparatory schools in the United Provinces are uneconomical. They fail to make literate five-sixths of the students who enter. The few who achieve literacy do so at a high cost : Rs. 120 per annum each, or more than the annual income of an ordinary Indian household. It is better that the term literacy should be here defined. I am using it in the same significance as that in the Imperial Census. Literacy is the ability to read a letter and write the reply to it. Such literacy, it may be claimed, is conferred by passing the second class, for the children in class III can write simple letters and read them too. The question is, however, of permanent literacy. The knowledge acquired in class II is not sufficiently well grounded to be a permanent possession of the child. He reads and writes with difficulty, and unless he practises daily, he will soon be unable to read and write at all. Literacy of the twpe required is achieved in class IV. It is not necessary to pass class IV, but it is essential to be admitted to it. There has always been a consensus of opinion in this matter. Mr. Harrop in his report says: "It is uncontestable that unless a boy reaches class IV he carries away nothing of lasting value." In the Hartog report we find (page 45) :--

"We think it justifiable to assume that, on the average, no child who has not completed a primary course of at least four years will become permanently literate."

16. In support of these views there is the simple proof of the census record as below. In 1921 there were in the United Provinces 1,556,626 literate males. In 1931 there were 2,043,410, or an increase of 486,784. The death-rate for these provinces is 26 per mille per annum for adults. If follows that of the 1,556,626 literate males of 1921, 404,716 died during the decade. This loss was made good by the outturn from our schools as well as the increase of 486,784. The round figures are 9 lakhs or 90,000 per annum. The enrolment given in the quinquennial report for 1932 shows the enrolment of class IV as 92,000 which is close enough. It is essential, therefore, to get our pupils into class IV. But this is not being done. The enrolment in the primary and preparatory schools maintained and aided by district boards for boys is as follows :

Class						Enrolment
Infant class	3	••		••		416,248
Class I	••	••		••	••	204,349
,, II	••	• •	••	••	••	147,865
,, III	••	••	••	••		107,233
,, IV	••	••	••	••	••	81,362
				Total		957,057

One boy in five is reaching class IV and that is achieved by staying on at school to the age of 13 or even 14. Few boys in class IV are under 11 years of age. From Mr. Harrop's report in 1926, 16 per cent. only of the boys in class IV were under 11 years of age. One school which I tested yielded only 1 boy out of 20. A large centre near Cawnpore yielded 64 out of 225. On an average only some 20 per cent. of our boys are under 11. In 1931-32 out of 91,978 pupils in class IV 19,362 were under 11 years of age.

17. If to the boys we add the girls the figures for those achieving permanent literacy become worse. The figures for the entire United Provinces in 1931-32 from the quinquennial report are :

Class						Enrolment
Infant class			· •			588,657
Class I	••	••				273,992
,, II	••		••			173,406
" III	••	••		••		<b>126,96</b> 0
" IV	••	••	••	••	••	91,978
				Total	••	1,254,993

Preparatory schools which merely get their boys into class II and fail to pass them to a higher class are uneconomical. They are worse. They give a false feeling that education is being carried on, whereas it is not. Money is being expended for which there is no return. Yet this is the condition of the bulk of our single-teacher preparatory schools.

18. We are faced with inefficiency of a very high order. Of 25 boys who enter our schools five only reach class IV and of these five, only one does so in due time. A motor car which consistently failed to function on three out of its six cylinders would either be relegated to the scrap heap or sent for overhaul. Yet our educational system is in no better plight. Over 50 per cent. of the expenditure on vernacular primary education is unproductive.

This may be expressed pictorially :

Infant class	فتسجيع الانتجابية الجرجانة المراجع الأنفاعين والتواجع المراجع والا	5.89
Class I		2.74
,, II		1.73
, III		1.27
,, IV	· · · · · · · · · · · · · · · · · · ·	•92

The portion shown in firm black line is 63 per cent. of the total.

19. One source of this inefficiency is clearly the enrolment in the infant class. I have enquired into this and record below samples of school histories of boys who entered the infant class in July, 1929:

		of test-	t of enter- July,	1	Numł still	oer of readi	i boy ng in	s	class	Nui	nber	of bo	ys lei	ft in	
	District		Number schools ed	Number boys ing in 1929	Infant class	I	п	III	IV	Passed IV	Infant class	I	11	ш	1 <b>V</b>
1. 2. 3. 4. 5,	Sultanpur Agra Cawnpore Bijnor Naini Tal	••• •• ••	5 4 3 12 2	236 113 85 187 83	••• •• ••	$     \begin{array}{c}       4 \\       1 \\       1 \\       2 \\       \dots \end{array} $	$20 \\ 6 \\ 3 \\ 12 \\ 11$	$33 \\ 2 \\ 14 \\ 20 \\ 10$	29 7 13 10 6	7 2 2 4 	89 67 35 97 35	26 11 6 24 13	22 11 5 10 6	6 3 4 7 1	$     \begin{array}{c}             3 \\             2 \\           $

The flight from education before that education is hardly begun is sharply brought out in the last five columns. About half the class leave in the very year in which they are enrolled. Here are three striking examples :

		D:	Number of boys in					
		Di	strict			Infant class	Class I	Class II
1. 2. 3.	Allahabad Ballia Azamgarh		•••	· · · · ·	  	20,948 18,058 23,823	7,707 6,264 7,357	5,244 4,496 5,111

20. The inflated enrolment in the infant class is due to :

(a) The superfluity of schools—Where there is a school, there is supervision and shelter for a small boy still unable to earn much who can be safely stowed away with the master while his parents go out to the fields. The school is a creche. As soon as the boy is fit to earn a few pice per day he is withdrawn. There was never any intention that he should go on to class IV. A school in every village, the ideal of some chairmen, will merely mean multiplication of creches.

(b) The absence in many cases of fees—There is no responsibility thrown on the parent by the admission of the boy to the school. Nor has the teacher to find an adequate monetary return from his class. Where fees are imposed the parent has to pay—even a little—and he generally will demand in return the tuition and promotion of his child.

(c) The teacher—In order to retain his job he catches sufficient little children to bring the total enrolment near 30 and thus gives a semblance of an educational need. In some cases he even pays the fees from his own pocket.

(d) The inefficiency of the teaching—The teacher himself is even when trained a man of limited outlook. When it is borne in mind that out of the 33,000 odd teachers in primary and preparatory schools, maintained or aided by district boards, 9,000 are untrained, it is obvious that the tuition of our boys is in very poor hands.

21. This futile enrolment in the infant class keeps going hundreds of useless schools. My records show innumerable samples of schools with enrolment of the following type :

					· ]	Enrolment
Infant Class	••	••	••	••	••	20
Class I	••	••	••	••	••	5
" II		••	••		••	2

I quote a few to illustrate :

				District			Enrolment in class $\rightarrow$			
Name of school			Infant				I	II		
1. 2. 3. 4. 5.	Nigha Shahir Nali Razzakpur Kurawa	••	   	Allahabad Pilibhit Almora Unao Muzaffarnagar	· · · · · · · · · · · · · · · · · · ·	   	24 21 22 31 20	3 1 1 1 3	2 1 2 3 1	

Such schools are merely financial sinks. Money spent on their maintenance is money wasted. This is the type of school that should be closed and it is largely this type that figures in my recommendations in Chapter VIII.

22. A second cause for the inefficiency of the school is the lack of proper staff. The single teacher preparatory school is a poor school. The single teacher full primary school is a bad school. Yet out of 17,839 primary and preparatory schools in these provinces, 8,308 or 47 per cent. are single teacher schools. The great bulk of these single teacher schools is uneconomical; 5,526 of them have not more than 30 pupils on roll. The boys do not advance past class II or the enrolment of the school as a whole is so small as to make the unit expensive. It is in the single teacher school that stagnation in the infant class is most pronounced. The following figures illustrate the difference in efficiency between the single-teacher and the multiple teacher schools :

	•	Percentage of enrolment in class—			
	District	Infant	I	п	
1	Number of single teacher	166	67	20	13
1.	Number of multiple teacher schools.	214	56	26	18
2.	Mainpuri	124	· 64	20	16
	L Number of multiple teacher schools.	155	54	25	21
3.	Cawnpore.	172	60	27	13
51	Number of multiple teacher schools.	281	49	29	22

23. It is to be borne in mind, however, that as Mr. J. A. Richey, the late Educational Commissioner with the Government of India said there is a place in India for the single teacher school. In areas like the south of Banda, the ravine country along the Jumna, the Kumaun Division, where the population is widely scattered, it is difficult to assemble more than 30 boys in a school. In other countries the single teacher school is found and functions satisfactorily. Here are sample figures from Scotland, where education (compulsory) is run by boards roughly comparable with those in the United Provinces:

District		Number	Number of schools with							
		of scholars One teacher		Two teachers	Three teachers	Four teachers	More than four teachers			
Aberdeen	••	20,283	52	63	54	20	29			
Ауг	••	37,291	20	19	18	17	78			
Selkirk	•••	2,725	11	4	1	1	8			
Sutherland	••	1,388	19	15	1	2	1			
Edinburgh	••	49,400	1	1	3	8	69			
Glasgow	••	156,102	••				166			
All Scotland	••	664,589	708	661	345	188	1,014			

Roughly speaking every fourth school is a single teacher school. The enrolment per teacher is 34. It is to be remembered that Scotland is a country of wide open spaces where the population is widely scattered. Also that by law provision must be made for the education of children even in those sparse areas. It is generally agreed that in a hilly sparsely populated area the single teacher school must be tolerated. Where, however, as is the case with the bulk of the United Provinces, the population is dense, there is little justification for the single teacher school and this type of school should either grow into a two teacher school or be abolished.

24. I am preaching no new doctrine. Mr. Kichlu's report (page 46) says: "The one-teacher school should be abandoned as a type of school and there should be only one type of elementary school, called primary school with a minimum of two teachers."

On page 47 he says : "No primary school should be maintained with an enrolment of less than 50. All schools in which the enrolment cannot be brought up to 50 should be closed and opened in other localities where a minimum enrolment of 50 can be secured."

25. These two principles are ideals to aim at. It is not yet practicable to give effect to them without exception but there is no doubt that the efficiency of education in these provinces will rise as we approach the ideal of a two teacher school with a minimum enrolment of 50 as our smallest educational unit. The  $6\frac{1}{4}$  per cent. flat cut in the prescribed expenditure on boys' ordinary and compulsory primary education brought about between 1931-32 and 1932-33 a decrease of 415 in the number of boards' primary schools, and in aided schools of 197. The decrease in enrolment was 2,631 and 1,128 respectively—a significant comment on the low enrolment in those wasteful institutions. Simultaneously there was a welcome drop of 1,095 untrained teachers of whom there are unfortunately still 4,009 left in district board primary schools. The aided school is generally a single teacher school and that teacher is untrained. Out of 5,390 teachers in aided schools in 1932–33 only 219 were trained. These untrained men are a menace to education. Not only are they untrained but most of them have low educational qualifications and children committed to their charge must certainly suffer. Mr. Richey in his report on grants-in-aid says (page 5) "We find that primary schools in India are usually started by individuals who hope to earn a livelihood by teaching. They are not founded with a view to meeting any educational need but from motives of personal gain."

The 61 per cent. cut has therefore been of distinct service in 26.forcing on boards an economy in their schools and an improvement in their staff which would not otherwise have been effected. It was my aim throughout my tour to persuade chairmen of education committees to co-operate with me in effecting economy. I was careful to impress upon them that no retrenchment was designed, that there was no intention of reducing the sums spent on education, that I should welcome further expenditure provided it was conducive to an educational advance along sound economical lines. I found chairmen generally inclined at the outset to question my motives, to suspect that I had an object beyond the detection of the wasteful school, namely the reduction of the Government grant. I was glad therefore to be able to refer them to G. L. no. V.E. 6/XXXVII-36(3), dated the 13th April, 1933 which specifically stated that the money saved by the abolition of uneconomical schools was intended to be utilized on other schools. This coupled with an assurance that there was no intention to reduce the Government grant enabled me to bring round to my views many chairmen who would certainly have opposed the abolition of schools if the resulting savings had been credited to Government and not to the boards. Chairmen were then willing to agree that a higher degree of efficiency could be reached by suppressing the uneconomical school and using the funds Chairmen then to extend and improve the remaining schools. perceived the difference between economy and retrenchment and willingly co-operated in selecting, for abolition, schools which were giving an inadequate return for the money expended. Most chairmen were alive to the need for finding recurring revenue for buildings, repairs and training of teachers and although they were not enthusiastic in the matter of suppression of schools they realized that the proposals made by me would put them in possession of the requisite funds while education in the district would suffer no serious loss.

27. It was repeatedly stated to me that a reduction of schools will mean a fall in the enrolment. Consequently fewer boys will receive education and there will be a set back to education in general. I do not deny that with the closure of some 2,000 schools there will be a drop in the enrolment in the infant class. This is to be expected. Under the present conditions it is even to be welcomed,

for the boys who will not come in future for enrolment are those who never intended to complete their education. The absence of such boys is not a loss but a definite gain. The staff will have less dead weight to pull. I claim on the other hand that there will be no drop but rather a rise in the figures reaching class IV when the superfluous and uneconomical schools have been abolished. The boys and the staff will be concentrated in fewer schools but there the tuition and conditions will be so much better that stagnation will be effectively reduced and boys will receive due advancement. I ask the sceptical reader to compare the figures for Bombay and Bengal in the table below. I have put in the corresponding figures for the United Provinces for his information. The figures are from the Hartog Report.

		Bombay	Bengal	United Provinces
1.	Population (in millions)	19	47	48
2.	Percentage of population of school-going age			
	receiving primary instruction	49	45	30
3.	Number of recognized primary schools for boys			
	and girls	13,835	52,809	20,389
4.	Enrolment	984,726	1,741,504	1,092,965
5.	Average number of boys per school	70	34	54
6.	Number of boys in class IV in 1927	123,099	96,342	100,869
7.	Proportion of pupils in—			
	Class I (i.e. infants)	100	100	100
	Class IV (i.e. class III in Uni ed Provinces)	41	11	18
	Class V (i.e. class IV in United Provinces)	36	7	15
8.	Average area served by a boys' primary school			
	(square miles)	10	<b>2</b>	<b>5</b> •6
9.	Percentage of single teacher schools to total			
	number of schools.	49	76	50

28. It will be remarked that while approximately the same fraction of the population is under instruction and while Bengal enrols 17 lakhs to Bombay's 10, the final results are very different. Bombay educates 36 per cent. of the boys who enter its schools. Bengal 7 per cent. only and whereas Bengal's enrolment is nearly double that of Bombay, the literate pupils in Bombay actually numerically exceed those in Bengal. How do the number of schools compare? Bengal has four, Bombay one. Area served? A school in Bombay serves on am average 10 square miles. In Bengal with an area of 2 square miles served, one might almost shout from school to school. Bombay has gone in for few schools, wide areas and big enrolment. The results testify to the wisdom of their action. It remains for us in the United Provinces to follow Bombay's lead. What is wanted is not more schools but fewer schools and higher efficiency. A few interesting statistics may be quoted here from Baroda where compulsory primary education has been in force since 1907 and has shown good results.

,,,	V (Class IV of the United Provinces)	• •	• • •	29

Within the last five years 277 schools have been closed including 107 for depressed classes whose enrolment however doubled in that time.

29. Yet another cause of inefficiency is the admission of pupils in the lower form twice yearly. This system which was an advance on the previous system is still too liberal. Inevitably it creates confusion. I recommend that admission be limited to the months of July and August each year and that subsequent admissions-except in the case of transfers-be rigorously banned. Without such a safeguard the teacher never can know where he is with his class. With it, he is assured of a compact body which he may reasonably teach as a whole. Further, the admission of boys under six years of age should be definitely discouraged. Little is gained by sending children to school prematurely. Out of 12.50 lakhs enrolled in primary schools some 64,000 under six years of age were recorded in 1931-32. Such children merely occupy space and learn to be idle in school. It is for consideration whether paragraph 175 of the Education Code should not be rescinded and a reversion to the old formula made as soon as convenient.

30. I have in paragraph 18 of this chapter alluded to the waste of effort and of money arising from the enrolment of children whose parents have no intention to educate them. The enrolment of pupils in infant class is 588.657, in class I, 273.992, in class II, 173,406, a drop of 4 lakhs. Taking the cost of education at Rs.8 per head per annum we are clearly losing Rs.32 lakhs annually from unlimited and unqualified admissions. I have repeatedly demonstrated to chairmen how their board was losing some Rs.50,000 per annum in this way. I had much difficulty in convincing chairmen of the need for control Many chairmen and many of our junior inspecting of admission. staff welcome enrolment and are gratified to see the numbers grow. They fail to see that unless the enrolment is accompanied by an increase in the efficiency of the schools they are merely increasing waste.

31. I therefore advocate control of admission. A tentative effort towards this has just been started in Sultanpur District where parents are asked to assure the authorities that on the admission of the boy they will not withdraw him till he has passed class II. This assurance may have little legal value but will certainly act as a deterrent to the casual admittance and withdrawal of children. In Malta, there are 163 elementary schools, with 30,939 pupils. There is (Year Book, 1933, page 684) no compulsory education in Malta but there is compulsory attendance. A person is not obliged to send his child to school, but, once admission is asked for and obtained, he has to leave him there until the age of 14 or alternatively until the final examination or the higher standard is passed. There are always lengthy waiting lists. The population is rapidly increasing and staff and funds cannot be obtained to cope with the increase of the population.

32. Compulsory attendance without compulsory enrolment would. reduce the waste in the lower preparatory section. Beyond class II the waste is not so pronounced. Boys are by that time definitely launched on their education and it might be sufficient if in the firstinstance regulations corresponding to those in Malta were introduced making attendance compulsory till class II has been passed. It is therefore for consideration whether the Acts under which compulsory primary education is enforced in municipalities and in districtboards, should not be amended so as to empower boards which might not wish to enforce compulsion in their areas to introducecompulsory attendance. The experiment is worth a trial.

33. Of the 17,839 primary and preparatory schools maintained or aided by the district boards, 3,744 are aided. These aided schools which include only 239 primary schools are classified as follows:

	·		Number of schools		Percentage of the total number of schools	
1.	Schools with one teacher			3,387	90.4	
2.	Schools with two teachers		••	265	7.0	
3.	Schools with three teachers			65	• • 1•7	
4.	Schools with four or more tea	ehers	••	27	0.9	

It is clear that the aided school is largely a single teacher school and as shown in paragraph 22 this type of school is inefficient. It is in such schools that one finds stagnation in the infant class and inadequate enrolment in class II and upwards. Chairmen have repeatedly impressed upon me that for Rs. 7 or Rs. 10 they are educating some 25 or 30 boys in those aided schools. But I would point out that these 25 boys are not receiving education. Only a very low percentage go forward to class IV. The single teacher aided school should slowly be abolished and I suggest that a condition be added to rule 70 of the District Board Educational rules that no grant shall be made where the school is within one and a half miles from a primary or preparatory school maintained by the district board. By adding this provision to rule 70 maktabs and pathshalas are excluded from its operation.

#### CHAPTER IV

#### TRAINING OF TEACHERS

1. There are in the service of the district boards 28,944 teachers in primary and preparatory schools of whom 24,935 are trained. Of the 4,009 untrained teachers 2,151 are oldish men. We have therefore 1,858 untrained teachers of trainable age in the service of the boards (vide table no. IX).

The service of a teacher is some 30 years. I take wastage at 2. 3 per cent. The present figure is actually below this apparently low The reason is that when 10 or 15 years ago there was ostimate. an expansion in primary education the teachers recruited were young men and wastage from their ranks has not yet been seriously felt. At 3 per cent. a supply of 870, say 900 teachers annually is required to make good our losses in primary schools apart from middle schools. In addition to this a margin is required to enable boards to deal with untrained teachers. It is not enough to supply the district boards with trained men. Municipalities may reasonably expect to have their men trained in Government training institutions although there are separate municipal training classes. The untrained teacher from the aided school is a problem in himself. There are about 5,000 teachers of this type. Many of them are too old to be trained. Usually they are not sent to a training class because they have not the requisite qualifications for admission and they worry the chairman of the education committee for an appointment under the board after their training.

3. To cope with the demand for trained teachers we have two types of institutions :

(A) Government normal schools which train men for the Vernacular Teachers' Certificate.

(B) Government central training schools, district board central training schools, district board training classes and three aided training classes which train for the Primary Teachers' Certificate. The training capacity of these institutions is given below, the figures being for 1933:

		Number	Number of
		of	boys passed
		institutions	in 1933
••		8	370
	••	6	174
••	• •	9	156
••	••	37	254
	•••	··· ·· ·· ··	Number of institutions 8 6 9 37

There are therefore over 900 trained teachers available for district boards annually in these provinces, just sufficient to cope with the present wastage. The case may alter when in ten years time the extra recruitment of the years round 1920 come near the retiring age. The closure of some 2,000 schools will give boards an opportunity of getting rid of their untrained men. We may take it that the existing institutions are capable of providing a sufficient supply of trained teachers to meet wastage on the present basis. That this is so is proved by the fact that there are 11 boards where there are no untrained teachers of trainable age. I mention their names :

Dehra Dun, Bulandshahr, Aligarh, Mainpuri, Bijnor, Moradabad, Shahjahanpur, Farrukhabad, Cawnpore, Lucknow, and Sultanpur.

But there is no margin to reduce the balance of untrained teachers. There are boards with large numbers of untrained teachers of trainable age. Allahabad 340, Gorakhpur 177, Meerut 140, Partabgarh 139, Azamgarh 108, Ghazipur 106, Saharanpur 101. The high numbers of those untrained teachers are due to the failure of the district boards to comply with rule 25 in the District Board Educational rules which requires that the board shall maintain training schools for primary school teachers sufficient to provide a number of trained teachers each year not less than the number of new teachers needed to make up losses due to death, resignation, etc., and to meet the demands caused by the expansion of education.

4. The following examples of failure to provide adequately for the training of teachers may be quoted. In 1920, District Board, Partabgarh, had eight training classes. These were reduced to four in 1923 and to *nil* in 1924-26. One training class was opened in 1927 and two more in 1928-29. The number of untrained but trainable teachers in Partabgarh is 139.

Ten years ago, District Board, Jhansi, had seven training classes costing Rs.1,800 each to run, i.e. Rs.12,600 per annum. Today, Jhansi has no training class and the supply of six teachers from the Government. Normal School, Jhansi, is not sufficient for a staff of 481.

5. The story might be repeated many times throughout the United Provinces. The funds which were originally destined for training of teachers have been devoted to financing new and often unnecessary mhools. Many district boards having read Mr. Kichlu's report, Onapter VIII, assumed that the Government Normal Schools would provide for their wastage and forthwith closed their training classes. District Board, Allahabad, has for years been providing insufficient trained teachers for its schools.

Since Mr. Kichlu and Mr. Harrop wrote their reports a new 6. type of training institution has come into being-the central training school. The school may be either Government or district board owned. The pioneer was Narwal some 20 miles from Cawnpore which was established in 1922. There are six Government central training schools. (Faridnagar, Kuraoli, Bahjoi, Biswan, Bara Banki, and Kerakat) and nine district board central training schools. The central training school gives a one year course leading up to the Primary Teachers' Certificate. The headmaster is a trained teacher of the S.L.C., C.T. type though in some cases there are B.A., B.T.'s. The staff of four V.T.C.'s is specially chosen. A central training school takes 30 students and the cost is about Rs.7,000 per annum (Rs.2,500 for stipends and Rs.4,500 for salaries, maintenance, etc.). The training in such a school is much superior to that in the small district board training class of nine students. The staff is more highly qualified.

I recommend that Government should maintain at least one 7. central training school in each Inspector's circle. This means that Government should take over Narwal in the Cawnpore District for the Allahabad Circle and create a new school in the Fyzabad Circle. Little difficulty will be experienced in the acquisition of Narwal as the Cawnpore District Board has on its lists trained teachers for whom no vacancy exists. I suggest that Basti be selected for the new Government Central Training School in the Fyzabad Circle. There is in Basti a disused opium building which I have inspected. It can easily be converted into an excellent central training school. Basti District Board has five training classes. It should be urged to run a separate central training school of its own and be given 10 to 15 seats only in the Government central training school. District Gorakhpur has one central training school at Kauri Ram. It should start another. Kasia. which I visited is a suitable place for this. District Board, Meerut. should have one central training school of its own. So should Ballia and also Allahabad where owing to the neglect of the Board untrained teachers number 456. At Jhusi a society has started a training school to do the work of the district board. This school, the board should take over and maintain. It might even need a second school for a few years. A suitable place would be Phulpur.

8. In the other boards the teachers are too few to make a separate central training school an economic proposition. I suggest however that excluding Kumaun where there is difficulty in getting sufficient enrolment and accommodation the boards be invited to submit through the Inspector proposals for combined central training schools abolishing the small training class completely. The 37 training classes at present in existence could be replaced by some nine new central training schools.

9. Stipends to students under training have been reduced to Rs.7 per month. It is essential that stipends should be paid. Large numbers of boys have passed their Vernacular Final Examination and are in search of employment. Some boards have taken advantage of this to secure a cheap supply of teachers. Not only did they cut down the number of stipends, they demanded from the candidates a sum without which the training class would not be started. Sums of Rs.100 to Rs.120 were paid by the students. I enquired in many training institutions how many students were in debt. Many have taken a loan of Rs.50 to carry them through the training period. The interest on the loan is a heavy burden and these young teachers will start life with a load of debt to work off. Stipends should be paid to all students under training and the system under trial at present whereby boards are allowed to appoint students without stipends should cease.

The boards should not be allowed to plead lack of funds in 10. making adequate provision for the training of teachers. In 1922 there were 433 training classes training 3,203 students. These classes cost Rs.7 5 lakhs. For 1923 the figures were 303 classes passing 2,742 teachers and costing Rs.5.9 lakhs. By 1927 the number had fallen to 65 classes. In 1933 we had nine district board central training schools and 37 ordinary district board training classes costing Rs.1.5 lakhs. While allowing for the exceptionally large provision in the 1918-1923 quinquennium for the training of teachers at a period of rapid expansion it cannot be denied that the boards have failed to maintain the requisite provision for the training of teachers during the last decade. The provision for training of teachers has gone down from over Rs.6 lakhs to Rs.1.5 lakhs and this money has been diverted to opening new schools. In the district board budget under the head "Education" there is a sub-head "C-Training Schools for men" which is followed by "D-Ordinary Primary Schools for boys." In the Government order laying down figures of prescribed minimum expenditure Government hive, however, combined these two heads and there is no separate prescribed minimum expenditure on the training of teachers. Boards have taken advantage of this to enhance the expenditure on primary schools at the expense of the training of teachers and have looked more and more to Government to relieve them of this burden. I recommend that when the present contract expires in 1936 a separate minimum be prescribed for the training of teachers. At present a student in a central training school costs some Rs.250 per annum. I recommend that district boards be compelled to make provision as a minimum for 2 per cent. of their teachers in middle, primary and preparatory schools of all kinds at the rate of Rs.250 per teacher per annum including stipends. The figure of 2 per cent. allows for a fair share of the expenditure on the training of teachers to fall on Government normal and central training schools. Allahabad District Board, for instance, with 1,248 teachers in its own schools would have to provide Rs.6,240 per annum for "training schools for men." Forakhpur with 1,878 would have to provide Rs.9,390. The total expenditure by the district boards in 1932-33 under heading "C-Training schools for men" was Rs.1,50,796. According to my proposal the minimum provision required would be Rs.1.63.300.

11. Untrained teachers come into the employment of the boards because they are cheaper than trained men. An untrained teacher gets Rs.12—1—14 per month while a trained teacher gets Rs.17, 19, 20 per mensem. The supply of trained teachers also has not always been sufficient to meet the demand. Further, a chairman will not appoint to his school a trained teacher from another district. He appoints an untrained man from his own. When once appointed little care is taken to see that these men are subsequently trained. Paragraph 252, Educational Code, says that admission to a training school shall be made by the deputy inspector, who will select candidates subject to confirmation by the Chairman, Education Committee. It has come to my notice that this rule is not closely adhered to. Chairmen in some cases appoint their own nominees and do not confine themselves to the list submitted by the deputy inspector. Even when untrained teachers were available for training they have been ignored and fresh candidates with no experience of teaching have been sent to the training classes. Paragraph 252, Educational Code, should be amended to preclude the possibility of such action by the chairman. The intention of the rule is that the deputy inspector should submit his proposals for the approval of the chairman. The deputy inspector will usually limit himself to training such untrained teachers as he finds in the boards' schools and his recommendations should receive consideration. It should not be possible for a chairman to introduce a fresh candidate so long as a trainable teacher in the service of the board is forthcoming.

#### CHAPTER V

#### SCHOOL BUILDINGS

1. Tables X to XV in appendix "A" show the details of the schools in which district boards are educating their charges. Out of 13,173 primary or preparatory schools maintained by district boards the boards own 6,791 buildings, have 1,737 on rent, 4,202 rent free, while 443 schools are without buildings. In 1917 some 57 per cent. of the boards' schools were in their own buildings. When Mr. Kichlu's report was published in 1925 the proportion had fallen to just under 50 per cent. In Mr. Harrop's report it was about 45 per cent. and today the percentage is almost 50. The rise in the percentage is due to the 6<sup>1</sup>/<sub>4</sub> per cent. cut under which many unsatisfactory schools were abolished. This percentage is unsatisfactory. Although the district boards' own buildings are badly built, poorly equipped and lacking in repairs, they are still designed as schools. The other buildings are dwelling houses or even mere verandahs. They are not designed for school purposes and are generally dark, overcrowded and dirty. It is far from reassuring to find such schools increasing in numbers. District boards are apparently under the impression that any building is good enough for a school. I am able to record one sign of progress, viz., the diminution of the school without a building. In 1926 there were 1,252 primary and preparatory schools of this class. Today the returns show 443 only. It is not a little disconcerting, however, to find that out of the 443, 303 schools without buildings are to be found in the Benares Gircle where the boards without exception are in a specially favoured financial position and should be able to put their requisite number of schools into These boards should proceed to get their existing buildbuildings. ings extended, financing this operation by the suppression of those hourseless schools.

2. District boards' buildings have not kept pace with the growth in enrolment. In 1924 the boards owned 6,000 buildings for an enrolment of 81 lakhs. In 1933 they own 6,900 for an enrolment of 96 lakhs. The dis rict boards anxious to diffuse education have devoted more and more of their income to the salaries of teachers and have failed to provide for the school buildings. Grants amounting to over Rs.9 lakhs for the construction of buildings were distributed from 1926 to 1929 amongst 21 district boards. Beyond this the district boards have done little to cope with the growth in the demand for education. Not only have new buildings been forgone, the existing buildings are not receiving proper attention.

3. In no district did I find the buildings satisfactory. Good school buildings exist but they are few and far between. I have visited schools where the roof was on the point of coming in, others where it had collapsed and had remained unrepaired for over a year, others where the doors had disappeared and where whitewash or thatch had not been supplied for years. The wretched state of school buildings is not confined to district boards and rural areas. I found in the city of Lucknow, schools which for dirt, smell, overcrowding and lack of sanitation surpassed imagination.

4. During the last ten years the district boards have constructed 3,013 school buildings, mostly kachcha but they have been making inadequate provision for their maintenance. In this period many schools have disappeared. In one district last year 17 schools collapsed during the rains. Table no. XVI shows the amount of recurring expenditure which the boards incurred on ordinary repairs of their school buildings against the figures shown in column 2 which they were required to provide in their budget for 1925-26 and subsequent years for repairs of their schools. It will be seen that the provision made by Cawnpore District Board has declined from Rs.11,892 to Rs.2,765. Bulandshahr has dropped from Rs.10,534 to Rs.3,607, Sultanpur from Rs.8,502 to Rs.2,076, Mainpuri from Rs.6,528 to The provincial figures of expenditure against Rs.2,86,000 **Rs.1**,865. which they were required to provide as the minimum from the year 1925-26 are noted below :

Year					*Amount of expenditure on ordinary repairs of school buildings
					Rs.
192526	••	••	••	••	2,98,463
1926 - 27	••	••	••	••	3,03,013
1927-28	••	••	••	••	3,37,952
1928 - 29		••			2,64,848
1929 - 30	••	••	••	• •	2,71,884
193031	••	••	••	••	2,57,068
1931 - 32	••	••	••	••	2,48,695
1932-33	••	••	••	••	2,34,306

Chairmen without exception admit that the position is un-5. satisfactory, but on the other hand they plead their inability to act without funds. Some plead that the resumption by Government of all sums in excess of one-eleventh of the prescribed minimum recurring expenditure has militated against any considered scheme for build-Others desire that the rule should be abolished whereby the proing. posals for new buildings and special repairs shall be submitted to the But in all cases they allege that lack of funds prevents the board. committee from improving the schools. My information is that the district boards cannot find from their own resources much money to build new schools. Even if they abolish the numbers of unsatisfactory schools recommended by me they will fail to raise sufficient income to provide satisfactory buildings for the remainder. The boards are already giving to education, from their funds not derived

\*A few boards have included expenditure on special repairs or original works in these figures.

from specific Government grants, a high proportion of their income the average being well over 30 per cent. I do not think we can reasonably hope that boards will increase their contribution. Funds for new buildings will have to be supplied by Government. If even as large a sum as one crore of rupees were available it could be usefully spent. Government have issued a volume of standard plans and it is an easy matter to erect a school when once funds are provided. Only some 20 per cent. of the schools are in *pakka* buildings and the *kachcha* school building continues to be the usual type.

The position varies from board to board. Mr. Harrop in 6. his report in 1926 worked out a scheme for helping boards to bring boys into school. The scheme was based on their defect from a fixed In table XX I have worked out the comparamean standard. tive position of the boards in respect to their enrolment, population and Government grant, This table shows that certain boards receive more than their share on the basis of population while others receive less. Districts in the east of the United Provinces, Jhansi and Kumaun boards generally are in a favoured position while in the Fyzabad circle and in the west they are not so well off. The table shows further that favoured boards have generally got a higher percentage of their population in schools and the survey maps of these districts show that they have more pakka buildings. There are, therefore, grounds for the belief that if funds were forthcoming, the schools and enrolment might improve. It is not, however, feasible to take a slice off a wealthy board which is working up to its budget and has a large number of established schools and teachers to maintain, in order to help a poorer board, although I am persuaded that in one case at least (Garhwal) the board maintains unnecessary schools simply because it has funds in excess of its requirements. Nor are fresh funds available from which the disparity can be removed. It used to be hoped that poor boards would take advantage of the conditions under which compulsory primary education might be introduced and by starting schemes, work up to a level where they received from Government Rs.2 for each rupee contributed by the board for expenditure on vernacular education. But additional funds for compulsory schemes are not available.

7. There can be no doubt, however, that the present distribution of Government grant is unsatisfactory and chairmen of the poorer boards have voiced their grievances to me in no uncertain terms. I suggest that Government take advantage of the existing  $6\frac{1}{4}$  per cent. cut in the recurring prescribed expenditure on ordinary and compulsory primary education for boys to adjust the differences. The Government share of the  $6\frac{1}{4}$  per cent. cut is Rs.3,02,600 approximately and when times improve this sum will be once again available. This sum would suffice for constructing 90 pakka schools accommodating three teachers and having about 100 boys on roll. I have inspected a building of this type recently made near Etawah which cost complete Rs.3,300. I suggest that Government retain permanently this Rs.3,02,600 and distribute it yearly to those

bourds which receive less than the average grant based on population. The grant should be non-recurring and should be for erection of buildings. A board should be asked to prepare a scheme for building ten schools and when the allocation, estimates, plans, etc., had been approved by the department, the board should receive Rs.30,000 towards the cost of erection by instalments as the work progressed. The only demand I should make on the board concerned would be that it should provide in its budget for the recurring maintenance of these buildings.

I recommend that the whole of the sum released from the  $6\frac{1}{4}$ 8. per cent. cut be given for buildings because the existing buildings are so unsatisfactory, because the savings arising from closure of schools are inadequate to meet this need and because I have so often been told "You cannot move the school from site 'X' to site 'Y' because no building exists at 'Y' and no funds exist to build." The entire arrangement of district board schools is haphazard and there has never been a considered plan for supplying schools to an area despite rule no. 50 in the District Board Educational rules. My proposal if worked through the inspector of each circle with the help of these new maps will gradually remedy affairs and provide a decent school within walking distance of the important villages of each Especially in areas under compulsion is revision of builddistrict. ings required. The existing recognized schools are badly sited resulting in small enrolment, and they are generally quite unsuited for school purposes being merely dwelling houses or verandahs. Ninety new schools per year coupled with a policy of deletion of the unsatisfactory single teacher schools will in ten years make a definite improvement in the educational buildings of these provinces. I do not think the sum excessive. Large sums for buildings are given to universities and to secondary schools and the Hartog Committee report, at page 262, considered that primary education needed more consideration.

9. Those new buildings which I contemplate will not generally be new schools. It is not my intention to add to the already too great number of schools in these provinces. The new buildings will replace unsatisfactory buildings or provide buildings for valuable schools which at present have no buildings of their own or at new centres where two or three unsatisfactory schools are to be combined to make one good school.

10. I recommend that Government make practically a free gift of 90 pakka three-teacher primary school buildings yearly to deserving boards. But it is essential to secure that these buildings shall be properly maintained. Many district boards appear to have lost all sense of responsibility for buildings. Grants for repairs are delayed with much consequent loss especially in kachcha buildings. In Cawnpore some schools have gone without repairs for six years. In Shahjahanpur the bulk of the schools have not been repaired for two years. It is no unusual thing to find a board with some 150

buildings	of its	own	for	whose	repairs	only	Rs.3,000	$\operatorname{are}$	allotted
and even	then th	is sun	ı is r	not sper	∖t. <sup>–</sup> Iqu	ote so	me exam	ples l	below :

1	District Bo	ard		Board's own buildings	Provided for repairs for 1933–34	Actuals for five years	Average per school
	· · · · ·				Rs.	Rs.	Rs.
Muttra Shahijahanp Hamirpur Azamgarh	 our 	· · · · · ·	••• •• ••	111 154 1 <b>45</b> 257	3,655 3,855 3,538 3,623	12,322 16,089 16,418 15,869	22 18 23 13

11. For the 8,087 schools owned by the district boards in 1932-33 the provision for repairs was Rs.2,34,306 or Rs.29 per school. When it is remembered that those buildings include middle schools with hostels it will be realized how inadequate is the provision. The boards by yielding to the demand for more and more schools have saddled themselves with a burden far beyond their financial strength. The burden must therefore be lightened and this adds weight to my proposal for lowering the number of schools. Some boards are reduced to asking owners of the houses kindly lent to the board for use as schools, to effect the repairs at the owner's cost.

12. To put an end to this rather discreditable state of affairs, I propose that the board engineer in conjunction with the deputy inspector of schools should prepare a register of the value of all educational buildings owned by the board, classifying them as *kachcha* or *pakka*. A register of this kind is clready maintained by the boards but it needs revision. On their value, an assessment should be made for annual repairs and by a new rule to be entered in the district board educational rules this sum should be provided annually in the board's budget. I suggest 5 per cent. of the value for *kachcha* and 2 per cent. of the value for *pakka* buildings. If these rates are too high they may be modified but the figures proposed are in accordance with sound practice. A schedule of rates for each area should be prepared by the district board engineer in consultation with the district inspecting staff.

13. It is necessary here to draw the attention of Government to the failure of the boards to provide hostels for their vernacular middle schools as required by rule 38 of the district board educational rules. Table no. V shows the shortage of hostels. This deficit arises from the clemand for more vernacular middle schools. Boards instead of expanding the existing middle schools few of which are really big and most of which are small (645 vernacular middle schools had in 1932-33 an enrolment of 76,884 or 120 per school) have yielded to the demand for additional middle schools. Fifteen new middle schools were recognized in 1932-33. They could not afford hostels so the schools went without. In some cases the school building and the staff are alike inadequate but the circle inspectors of s hools with whom recognition rests are gradually securing a building for the school. I saw in Basti District one vernacular middle school without a building. The teacher's salary was Rs.5 per mensem. In Mainpuri a middle school of 70 boys has a mud hut, one room for a building and a staff of four teachers. Hostels, however, continue to be lacking and boys sleep in the school as do the staff in some places. As vernacular middle education is efficient and satisfactory I propose that where recommended by the inspector, grants be given to help boards to provide hostels for vernacular middle schools.

[14. The expenditure of some Rs.3 lakhs yearly in grants—all of it being Government money—is not a thing lightly to be entrusted to district boards. Experience has shown the need of supervision at all stages of the scheme. Not only is the district engineering staff inadequate to supervise such a programme as I propose, the staff is sometimes not willingly placed at the disposal of the Chairman of the Education Committee. I suggest therefore that a suitable officer from the Public Works Department be attached to the office of the Director of Public Instruction to deal with the schemes submitted by district boards, to supervise the work and pass orders for payments. This officer can also have work turned over to him from the anglo-vernacular schools.

15. Regarding equipment of schools I have a similar tale of neglect and inadequacy of supply. Below are given some instances of inadequate supply of equipment :---

District				Number of schools	Amount provided in 1933–34 for equipment	Actuals for five years	Average per school per year
					Rs.	Rs.	Rs.
Muttra	•••	••	••	250	Nil	6,127	8
Cawnpore	••	••		486	2,643	6,047	2
Fatehpur	••	••		264	1,663	3,777	3
Allahabad	•••	••		567	4,778	13,039	อ
Ghazipur	••	••		338	626	14,135	8
Bareilly	••	••	••	293	1,335	2,922	2

Equipment has been the hen roost to be robbed whenever a new school was demanded. As a result the schools have gradually lapsed into a state which can only fairly be described as squalor. Apart from the dingy or dirty appearance of the school due to neglect of repairs, the school suffers from a starvation of supplies. The *tats* on which the boys sit are frowsy—if indeed they exist at all. Here I have a word of praise for the schools, particularly those in Benares, where boys weave their own and have them bought by the district board. The simple furniture of a school, blackboard, chair, table, is ricketty and patched. Time-pieces are lacking. Teachers do not
get text books. Free books for poor pupils do not arrive in time. Contracts for supply are given late in the year with the result that inferior articles are supplied with consequent loss to the boards. A picture is almost unknown. If there is a picture it is frequently not am educational picture. Flowers, beauty or uplift are lacking. The schoolroom is stark, bald and depressing. Little patches of ground with a few wretched "gendas" are displayed as the school garden. The story is one of unrelieved depression. This should not be so. The Indian School Supply Depot, Calcutta, Pictures are available. have an excellent series. The Board of Vernacular Education have in vited publishers to submit further samples. Boards should supply flower seeds in time. The spread of hand work should supply some of the needs of the school and boards should make reasonable provision to enable a headmaster to purchase those articles needed by a school which can be made by the pupils, for instance, tat, string, pointers and takhtis. I suggest that as in buildings, so in equipment, a prescribed minimum be imposed on the boards. As a rough guide I suggest  $1\frac{1}{2}$  per cent. of the budget be provided for equipment and the deputy inspector of schools, who is Secretary to the Education Committee, should be charged with the duty of seeing that the articles are purchased and distributed early in the year. It is regrettable that public bodies should have to be fettered by regulation in this way but in view of the steady deterioration of the equipment of the schools, I think it essential that a statutory amount shall be provided Schools vary in size but a sum of Rs.12 per for their maintenance. annum per school cannot be considered excessive. I think few will object to Re.1 per month being expended on a school even a very small one.

## CHAPTER VI

## COMPULSORY PRIMARY EDUCATION FOR BOYS

The United Provinces Primary Education Act was passed in 1919, but it was 1922 before a municipality availed itself of the powers conferred. Eleven more followed in 1923, five in 1924, six in 1925 and when in 1926 the United Provinces District Boards Primary Education Act was passed, there were 25 municipalities trying compulsion. Half of these had applied the principle to the whole area under their jurisdiction. The others, the larger boards, applied it to a part only of their area. By 1931-32, 37 municipalities had introduced the scheme and now out of 85 municipalities 36 have compulsion in whole or in part, the scheme in Farrukhabad having been cancelled, while 50, largely small places, have not.

2. In 1926 the United Provinces District Boards Primary Education Act was passed extending the principle of compulsion to district board areas. Nineteen district boards started schemes in 1928-29, six in 1929-30 and two in 1930-31. Three boards, however, have been unable to contribute their share of the expenditure and the scheme has been cancelled in their areas. Sanction has just been accorded to the scheme in Benares District making 25 boards with the scheme in operation.

3. The schemes in municipalities involve an expenditure by Government amounting to Rs.3,43,653 per annum recurring and Rs.5,83,850 non-recurring. (Rs.5,03,919 for buildings and Rs.79,931 for equipment.) The schemes in districts have committed Government to a recurring expenditure of Rs.3,55,970 recurring and to approximately Rs.8 lakhs non-recurring for buildings and equipment. A sum of Rs.5 lakhs recurring for grants to district boards for introducing schemes of compulsory primary education for boys was originally voted in 1928-29 and was available for the purpose up till 1932-33. No funds are now available for the expansion of compulsory primary education and Benares District Board financed their scheme by retrenching teachers in overstaffed schools.

4. Two tables (nos. XVII and XVIII in Appendix "A") are appended showing for municipalities and for district boards, respectively, the extent and the cost of the schemes which are at present in force. The totals are :

Number	Boys liable	Total cost of sance	the scheme	Government share		
of boards	to compulsion	Recurring	ecurring Non-recurring		Non-recurring	
1	2	3	4	5	6	
36	60,772	Rs. 5,07,134	Rs, 8,75,772	<b>R</b> s. 3,43,653	Rs. 5,83,850	

**Municipalities** 

District boards

Number	Number of	Boys liable	Total co sch	st of the eme	Government share		
or boards	compulsion	sion	Recurring	Non- recurring	Recurring	Non- recurring	
1	2	3	4	5	6	7	
			Rs.	Rs.	Rs.	Rs.	
24	378	55,274	3,76,600	11,63,450	3,55,970	7,75,630	

5. Rai Sahib Munshi Kulwant Rai was placed on special duty in 1926 to report on the working of compulsory primary education in rnunicipalities. He drew attention in his report to :

- (a) irregularities in census preparation;
- (b) inadequacy of inspection and supervision;
- (c) inefficiency of school committees;
- (d) inadequate fines on defaulters;
- (e) poor qualification of teaching staff;
- (f) wretched state of buildings;
- (g) anomalies in salaries.

He estimated that out of 28,157 boys liable to compulsion in 23 municipalities where compulsory primary education was in force at that time, 24,623 had been enrolled (of whom 11,245 were in school prior to the introduction of compulsion) and that the average attendance was 59 per cent. Little could be done on his report for lack of funds.

6. The post of the Inspector of Muhammadan Schools, United Provinces, was revived permanently with effect from 26th May, 1930, and Mr. Alay Ali Naqvi, M.A., the officer appointed to that post was entrusted, in addition to the work of the Inspector of Muhammadan Schools, with some other duties; one of these is to assist the Deputy Director of Public Instruction in supervising the schemes of compulsory primary education both in municipalities and in districts.

Mr. Naqvi during the course of his tour in 1930-31 investigated the working of compulsory primary education for boys in a number of district board and municipal board areas and submitted his report to the Director of Public Instruction in July-August, 1931. The report revealed many defects in the present working of the scheme and suggested modifications of the rules framed by Government under section 17 of the United Provinces District Boards Primary Education Act (Act no. I) of 1926 and section 18 of the United Provinces Primary Education Act (Act VII) of 1919.

7. A departmental committee consisting of the Deputy and the Assistant Directors of Public Instruction, two Assistant Inspectors of Schools, two Deputy Inspectors and one Sub-Deputy Inspector of Schools with Mr. Naqvi as Secretary of the committee was held on 16th and 17th November, 1931, and made recommendations separately for rural and for urban areas as well as proposals of general nature common to both rural and urban areas. Accordingly necessary amendments to rules framed by Government under sections 17 and 18 respectively of the two Acts referred to above are being made and some instructions of general nature which are likely to remove the existing defects in the working of the scheme and are also likely to improve matters, have been issued to the boards concerned.

Sufficient time has not yet elapsed to pronounce judgment on the results of the action taken on the recommendations of the above Departmental Committee, but it is expected that with stricter supervision and control better results will be obtained.

8. The results of compulsion so far have been disappointing. There are instances where the scheme has already effected an improvement and the increase in enrolment in classes III and IV of late lead us to believe that compulsion when properly enforced can yield results commensurate with the trouble and the expenditure, but it is desirable that Government should realize the extent to which compulsion in general has so far failed to achieve the aim of primary education, viz., the conferment of permanent literacy within four years of school life. Unless a boy reaches class IV he does not retain permanently the education imparted in the lower classes. The following table of class-wise enrolment from Bareilly Municipal Board shows to what extent boys enrolled at the age of 6 in the infant class progress in the 5 years of compulsory education 6 to 11.

9. Bareilly has a population of 134,000. The scheme applies to the whole municipal area. The scheme was introduced in January, 1923, and compulsion to secure attendance was applied in 1926. The enrolment since 1928-29 has been :---

Year		Infant class	I	II	I11	IV	Total
1928-29		3,645	967	459	185	66	5,322
<b>1929-3</b> 0		3,565	846	499	174	65	5,149
1930-31		3,715	882	460	198	64	5,319
1931-32		4,467	993	471	196	64	6,191
1932–33		4,585	1,056	510	174	49	6,374

Of 3,645 boys in the infant class only 49 reach class IV 4 years later. (The Superintendent of Education who examined the tuitional condition of class IV told me that the figure 49 should really be 70, but teachers struck off weak boys rather than show their inefficiency). Still even at 70 the figure reveals the failure of compulsion. There should be in Bareilly with a population of 134,000 some 8,500 boys liable to compulsion instead of 6,374. Prior to compulsion there were 24 municipal schools and 25 aided, total 49 engaged in education. Now there are 41 municipal and 29 aided, total 70. These 70 schoolsaverage enrolment 90—are scattered all over the municipality\* and those I saw were most unsatisfactory. They were dirty, unorganized, congested and in the worst environment possible without playground or anything to brighten the life of the boys.

The census register shows 10,868 boys between 6 to 11 years of age. The Superintendent of Education says there are 10,617. Form B gives 9,871. But I am not certain of the census. The figure is somewhere between 9,000 and 10,000. The important figures are :

Enrolled in	recogniz English	ed vernac schools	ular schools	s 	•••	6,374 1,037
Exempted	••	••	••	••	••	294
				Total	••	7,705

Taking the number to be enrolled at 9,871 we have thus 79 per cent. enrolment. The average attendance last year was 4,269 out of 6,374 or 67 per cent. This has recently been raised by a drive against defaulters to 72.8 per cent. Expenditure was Rs.69,320 for 6,374 pupils or Rs.11 per pupil.

10. For Moradabad where compulsory education is in a much better state, the important figures are :

Boys hable to compulsion	••		••	6,034 (	which is re	liable).
,, enrolled	••	••	••	4,787		
" exempted		••	••	267		
" reading in Anglo-Ve	rnacular	schools		397		
,, escaping compulsion		••	• •	<b>5</b> 83		
Average attendance			••	78 p	er cent.	
Number of schools		Fi	ftv three	giving 9	0 boys per	school.
Cost		R	upees 46.0	)67 in 19	3132 or	Rs.9-10
			per sch	olar.		

In July, 1932, the figures were :

6,504 liable; 3,567 enrolled; 2,937 not enrolled after 9 years working; cost Rs.48,657.

	The	class-wise	enrolment	for the	last 5	years is	given	below :	
								,	~

Year	Infant	I	п	ш	IV	Total
1928-29	 3,341	748	332	167	55	4,64 <b>3</b>
1929-30	 <b>3,</b> 405	795	372	118	41	4,731
1930-31	 2 <b>,48</b> 6	774	348	149	45	3,80 <b>3</b>
1931-32	 2,491	740	351	164	66	3,812
1932-33	 <b>3,</b> 106	802	497	183	73	4,651

Lucknow Municipality has 6,104 boys liable to compulsion of whom 98 per cent. were admitted and attendance was 71 per cent. The percentage of class-wise enrolment is :

Infan	t class			••		•	•			. 64	1.7%
Class	1	•	•	••		•			•		20%
,,	II	•	•	••		•	• •		•	,	10%
"	III	•	•	••	•	•	•			, 4	•4%
,,	IV	•	•	••		•	••	•	•		•9%

\*Vide Map no. V, appendix "B".

12. One of the most important district board schemes in operation is in Laharpur Pargana, district Sitapur. Area 187 square miles; population 110,033; boys liable 6,974; enrolled 4,793; 69 schools or 1 school per 2.7 square miles and enrolment 70 boys per school.

No objection was made to the proposal in the scheme submitted to add 30 new schools to the 40 already in existence. The classwise enrolment is given below :

Year		Infant	I.	п	III	IV	Total
1928-29		4,752	365	136	51	12	5,316
1929-30		4,011	927	205	77	10	5,230
<b>193</b> 0–31		3,880	1,148	365	94	16	5,503
193132	•••	3,426	1,713	426	175	25	5,765
1932–33	••	3,106	1,560	470	174	46	5,405

13. It is to be borne in mind that with a yearly promotion of 70 per cent. of a class the distribution in the fifth year of 100 boys admitted in the first year would be :

Infant c	lass	••			••	Nil
Class 1	E			••	••	8
,, I	[	••		••	••	27
" IIJ	[	••	••	••	••	40
" IV	′ ••	••	••	••	••	25

With 60 per cent. promotions the numbers would be :

Infan	t clas	s				••	2
Class	Ι				••	••	14
,,	II	••	••	••	••	••	35
,,	III	••	••	••	••	••	35
,,	IV	••	••	••	••	••	14

Under present conditions compulsion is not likely to be more than 25 per cent. efficient. Compulsion will seldom deliver in class IV more than 25 per cent. of the boys enrolled four years previously in the infants. Nothing like 100 per cent. promotion can ever occur.

Even with these limitations the results in Laharpur are more than disappointing.

14. The enrolment of boys liable to compulsion in Allahabad. District Board compulsory area at the end of a five years trial is :

Infant class	••		••		6,899
Class I	••		••	••	1,374
"II	••	••	••	••	566
" III	••	••	••	••	257
" IV	••	••	••	••	81
	Tota	d	••	••	9,177
Number of boys li	able to com	pulsion	••		11,374
Exemptions	••		••	••	529

In Agra District Board we have 824 liable to compulsion of whom 726 are enrolled as below :

Infar	nt clas	38	••	••	••		377
Class	5 I	••			••		174
,,	II	••					116
,,	III	••	••		••		41
,,	IV	••	••	••	••	••	18
			Total	••	••	•••	726

15. To give an idea of the working of compulsion in municipalities and in district boards I give the figures of 20 municipalities, for 10 district boards (a) where compulsion was reported to be making fair progress, and for ten district boards (b) taken at random from the remainder :

	Enrolment		Enrolment in class IV in		Enrolment in class III in	
	Infants in 1928–29	Re- aching class YV in 1932–33	1928	1932	1928	1932
Municipalities (20)	11,054	477	374	467	751	1,245
District boards $(a)(10)$	13,326	511	187	487	417	1,047
Düstrict boards (b)(10)	9,710	295	234	294	525	551

Of 100 boys enrolled in the infant class some 4 per cent. reach class IV before exceeding 11 years. It is of interest to note that compulsion is showing its effect in the increased enrolment in classes III and IV. The centre of gravity of enrolment is beginning to emerge from the infant class and move slowly towards class II. A few boards show reasonable progress, but on the whole the results to date are very poor

16. There are certain factors to be borne in mind in connexion with this poor performance.

*First*—The figures under consideration are abnormal. The net of compulsion swept into the infant class a horde of boys of all ages and mentalities and sufficient time has not yet elapsed for the school to get clear of this incubus. The figures on the roll in the infant class should be heavily discounted to eliminate those who never could reach class IV.

Second—The teachers were, and in many cases still are, poorly qualified. There has been little attempt to train them. In Allahabad district compulsion provided posts for large numbers of untrained men for whom the board has not yet provided adequate training facilities.

Third—Compulsion simply perpetuated the old vicious system of bad buildings and small classes. The schemes submitted were

treated by mathematics, numbers of boys were divided by 30, masters allotted and schools assigned without in many cases a map of the area or a clear realization of the inter-relation of the schools. No well thought out plan for buildings was submitted but instead, a start was made in whatever house could be had free or for a small sum. The school with 300 or more pupils on roll was never conceived nor was any attempt made to arrange for classes which would give each teacher an economic load.

The conditions under which compulsion is imposed on 17. pupils have to be seen to be believed. I visited schools in Lucknow which were insanitary, dirty, over-crowded, dark and really impossible as schools. In the Cawnpore District Board area I saw schools which were in a dangerous condition and one where for over a year boys had worked in a room whose roof had partly fallen in. The inspecting staff in every centre report the unsatisfactory nature of the buildings which are usually mere dwelling houses, totally unsuited for school uso and in a wrotched state of repair. The rooms are too small to seat the normal class of 30. They are badly lit, badly furnished and dirty. A playground in a municipal school is unknown.

The allocation of schools to the area has never received due 18. consideration. In fact I may safely state that it has received no considertion at all. Boys had to be housed and regardless of site, size, or suitability, a house-generally the biggest available at the time and for the money-was hired and the school started. Old schools were taken over in the scheme, schools which were failures under voluntary education and were certain to make still greater failures under compulsion. No real attempt was made to split up the area into full size educational units each capable of feeding a full sized school where a teacher would have his full load of 30 boys, to build big schools where they did not exist, and to see that the boys attended these schools. Instead, the areas are plastered with small and uneconomical schools each reproducing in itself all the evils of the voluntary system in an aggravated form. That old man of the sea, the single teacher school, maintains his hold even under compulsion. Segregate schools multiply.

19. There should be an end of this. The single teacher school should in a compulsory area be ruthlessly wiped out. With a map of the area in front of him an officer should proceed to allot a school to an area—a large school having 200 at least on roll, the bigger, the better—and to provide for that school a building, playground, staff and attendance officer. Existing schemes should be drastically overhauled. Re-organization of schools in the areas coupled with a building scheme are imperatively required. Without this, compulsion will not yield results comparable with the expenditure.

20. I have to make suggestions for the improvement of education in compulsory areas. My suggestions deal with :---

- (a) The areas.
- (b) The schools.

- (d) The attendance officers.
- (e) The census arrangement.

(c) The staff.

- (f) Exemptions.

(a) The areas—The application of compulsion to small isolated areas or to a few wards in a town is unsound. Towns should be required to extend the system throughout the entire municipality. In district boards, compulsory areas small and scattered are the cause of waste and inefficiency. In Allahabad district with 88 areas each based on a village capable of yielding 100 boys, compulsion is a complete failure (9,000 boys enrolled and 6,900 in the infant class The schemes should be re-considered and after 5 years work). re-designed to make compulsion apply to a compact area yielding some 2,000 pupils sufficient to be an economic burden for a whole-time assistant attendance officer. Where such an area is not available a smaller area yielding say 1,000 may be accepted but such an area should be so situated as to be worked along with a similar area at no great distance.

(b) The schools—The new scheme should not come into operation till proper schools are available. I have proposed a free gift of 90 primary schools yearly to deserving boards. As a beginning these schools should be sited in the re-designed area under compulsion. These schools should be good *pakka* buildings capable of extension and giving each teacher an economic load. Large schools should be aimed at : 300 or more pupils where possible.

(c) The staff——No single teacher school should receive recognition under the new scheme for compulsion. This means withdrawal of recognition from numbers of segregate schools. This step should be definitely faced. Compulsion has not yielded results largely because of incompetent teachers. There should therefore be an end of the aided untrained teacher. The teachers should definitely be trained men.

(d) The attendance officers—It is not satisfactory to employ the headmaster of a school as part-time assistant attendance officer. He neglects either his work as a teacher or his duties as assistant attendance officer. The allowances cause heart burning amongst his staff and discontent amongst other headmasters. As working in Allahabad District Board the system is palpably wasteful. The scheme of compulsory primary education should be everywhere re-designed to make it possible economically to employ a full time assistant attendance officer. In some boards I have found this officer incompetent and quite unfitted for his The requisite qualifications for an assistant attendance officer duties. should be specified by Government and he should be appointed in consultation with the Inspector of the Circle. This officer should be a trained teacher; he should be well paid and required to apply the terms of the Act throughout his area. A teacher in a school cannot attend courts, conduct prosecutions and go scouting for defaulters. This requires a whole time man and one well paid. Where the area is too small to employ such an officer the remedy is to enlarge the area or to scrap the existing scheme.

(e) The census arrangements—The census arrangements are quite inadequate. The sub-deputy inspectors do not know the provisions of the Act and they have only the vaguest of ideas how to check the census returns. In consequence boys are escaping compulsion. They do not appear on the rolls for their existence is not known. Subdeputy inspectors have enough to do with their schools but where compulsion has been introduced it is essential that they check the census. I have in several cases shown them how to use the village returns, dividing the population by 16 as a rough guide. They should further use the patwaris' rolls and finally make a personal check of 10 per cent. and furnish a certificate as to the correctness of the census. A manual of compulsory primary education is under preparation. When this has been completed, a translation in Urdu and in Hindi should be in every school and district office.

Teachers must definitely understand that it is their duty when called on, to assist in preparation of the census. In making a door to door visit teachers should not go singly. Parents should be warned about the penalty for supplying false information. [*Vide* \*rule 8 of the rules framed by Government under section 17 of the United Provinces District Boards Primary Education Act (Act I) of 1926].

(f) Exemptions—It is difficult to define comprehensively the grounds on which exemption should be granted. The grounds are detailed in section 8 of the Compulsory Education Acts, but different bodies have laid their own interpretation on these terms. The most common grounds for exemption are "religious grounds" and in Meerut I was informed that out of some 2,000 boys liable about 500 were exempted on this plea. I suggest that the term religious grounds be restricted to mean that the boy has to perform religious duties which make it impossible for him to attend a recognized school. I further suggest that the term "satisfactory manner" in sub-section 3 of section 8 of the Acts be interpreted as meaning that the child is receiving instruction of the standard prescribed in section 2(4) of the Acts. A course which fails to include reading, writing and arithmetic of such standard should not be accepted as satisfactory.

21.I am not prepared at this early stage of compulsion to make suggestions for changes in the school committees. These bodies have not hitherto been very successful. With a few exceptions they have failed to enforce compulsion. Meetings of the committee are irregular. Action is apathetic. The committees are frequently ignorant of their powers and their duties. The dread of unpopularity prevents vigorous action against defaulters. The fines in court have been in many cases insufficient to deter a parent from keeping his child away from school. In some places fines of annas two to four are common and my analysis shows an average fine of annas six. Tt is for Government to consider whether the attention of the district authorities should not be drawn to this misplaced leniency. Also whether a minimum fine of Re.1 should not be stipulated in section 10(1) of the Acts.

The power of the school committees to compound cases should be brought home to them and they should be encouraged to compound rather than send cases to the courts.

\*Published with Government Notification no. 2310/XV-1158, dated September 8, 1933.

I have to point out that compulsion is an expensive matter. 22.While Rs.8 per annum is the cost of primary education of an ordinary boy the figure rises to Rs.10 or Rs.11 when compulsion is introduced. The scheme moreover is not so far producing in the allotted space of 5 years anything like the percentage of boys hoped for. The enrolment in class IV in 1928 at Bareilly prior to the introduction of compulsion was 66. In 1932, it was 49, a drop of 17. In Bijnor the corresponding figures are eight and six and in Muzaffarnagar one and The sums involved in compulsory education are now large, too nil. large to allow waste to continue on the present scale. The numbers of boys involved, 116.000, is too great to allow us to contemplate with equanimity an enrolment in class IV of 1 per cent. of the total as in Allahabad District and Lucknow Municipality. We are dealing with large sums and important issues. The district boards and their committees have failed to come up to our expectations and overhaul is imperative. Almost without exception a scrutiny of the conditions under which the scheme for compulsory primary education is working is required. Most of the schemes should be re-designed. Such a task is too much for the existing staff in the office of the Director of Public Instruction. As a sample of the task to be undertaken I append a report\* on the working of one scheme-Allahabad District Board. The problems are the same but on a smaller scale in every case. I therefore recommend that a post be created in the office of the Director of Public Instruction to be termed Assistant Deputy Director of Public Instruction. The duties of the incumbent shall be to work under the Deputy Director of Public Instruction, and to keep him in touch with the entire working of compulsory primary education. The Deputy Director of Public Instruction is the officer in immediate charge of vernacular education and it is therefore desirable that the new officer should work under him. The Deputy however is overburdened at present. Since the abolition of the post of Additional Assistant Director of Public Instruction the duties devolving on the officers at headquarters have been more than an ordinary officer can be expected to cope with and the creation of the new post will give the relief which is now essential.

( 42 )

#### CHAPTER VII

#### FEES

The Government of India in their resolution appointing the Educational Commission of 1882 stated that "it is no doubt right that persons in good circumstances should pay the full cost of their children's education. or at any rate that no part of this should fall upon State funds." Government resolution no. 768/IX—3649, dated the 8th November, 1918, says, however, that "in order to ensure that no child will be prevented by poverty from proceeding through the full primary course there should be no restriction on boards in regard to exemption from fees. The present rules are therefore being abolished and replaced by a single rule specifying that exemption should be freely given to the children of poor parents."

2. The rules under which fees are charged are included in the District Board Educational rules nos. 45, 65, 85, 87 and 104.

Rule 45—In middle vernacular schools the following scale of monthly fees shall be adopted as a minimum :

			Middle section	Classes III and IV
At headquarters		••	6 annas	4 annas
In the district	••	••	6 "	3 "

The reference to classes III and IV in this rule relates to days gone by when such classes were attached to middle schools. This portion of the rule should now be deleted.

Rule 65—In primary or preparatory schools the ordinary fee shall not exceed two annas a month in the highest class, nor be less than half an anna, but a board may allow a higher rate in selected schools or from selected classes of pupils, particularly in schools which have been established in response to an expressed local demand.

Rule 85—Subject to the minimum laid down in rule 45 for middle vernacular schools and to the maximum and minimum scale of fees laid down in rule 65 for primary and preparatory schools the board shall fix the fees to be levied in board schools and shall determine the conditions of exemptions from fees and the number or proportion of pupils in each school or class that may be exempted in whole or in part. No fees shall ordinarily be levied in special schools established under rule 77 or in half-time or night schools established under rule 78. The board may exempt the children of teachers employed in vernacular schools from payment of school fees.

Rule 87—Deals with fees for re-admission and rule 104 exempts girls from fees.

There has been much latitude in the interpretation of these 3. rules. Some boards levy no fee throughout the entire primary section. In others the infant section is free. It appears that about 1925-6 some boards proposed the abolition of fees in the primary and preparatory sections and were informed that Government had no objection to the abolition of fees in the primary schools of the district provided that the district board met the extra cost owing to abolition of fees from its own resources without reducing its expenditure on vernacular education below the minimum standard prescribed by Government. In 1926-7 there were no fewer than 26 district boards experimenting with free primary education. The loss of income however and the consequent restriction of the activities of the board have since that time brought about the return swing of the pendulum and now there are only seven boards where primary education is free.

4. There has been a marked tendency on the part of the boards to reduce fees to the minimum. The chairmen quote rule 85 of the District Board Educational rules in support of their action urging that fees should be kept low so that boys may be admitted freely to schools. It is to be borne in mind here that the fixation of fees to be levied is the duty of the board and not of the education committee, as the item affects the budget which does not fall within the powers of the education committee. Rule 85 is explicit on this point. The chairmen of education committees with whom I have discussed the need for enhanced income from fees have, however, in some cases advanced two objections to the re-imposition of fees :

(a) Enhancement of fees will mean a reduction in enrolment. Boys will leave school.

(b) The education committee does not benefit by levying fees as the enhanced income although deposited in the district fund (education) account merely relieves the board of its responsibilities for the finance of the fund.

5. In 1925-6 there was a remarkable demand for free primary education. Sanction was given to the experiment but almost every one in close touch with education doubted the wisdom of the step. The experiment failed. Enrolment was enhanced, but it was at the expense of efficiency. The expenditure on buildings, maintenance and equipment dwindled yearly. Some boards went bankrupt. Others, realizing whither they were heading, wisely reimposed the fee. Now there are but seven boards where primary education is free, viz. (vide table no. XIX) :

(1) Allahabad,	1	(4) Etawah,
(2) Partabgarh,		(5) Pilibhit,
(3) Fyzabad,		(6) Agra,

## (7) Shahjahanpur.

Table no. XX of appendix "A" shows that five out of these seven boards are getting more than the average grant on a population basis, the balance being Rs.1,26,000 in favour of these boards on the whole. It seems that these boards being in receipt of funds in excess of their requirements have taken to extravagance.

		Number of—		Enrolm		
Year		Board schools	Aided schools	Board schools	Aided schools	Fee income
1		2	3	4	5	6
						Rs.
1923-4.		207	78	14,552	2,432	2,987
1925-6	••	217	87	16,440	2,897	Nil
1929-30	••	263	70	19,428	2,534	Nil
1930-1		238	30	1 <b>6,6</b> 48	1,245	Nil
1931-2	••	231	30	15 <b>,9</b> 06	1,167	10,514
1932-3	••	239	30	1 <b>6,</b> 507	1,483	10,389

6. I was constantly told that the imposition of fees would result in a marked flight from schools. The following figures from Rae Bareli are of interest to disprove this :

Consequent on the accession of the non-official chairman in 1923-4 fees were abolished in this district. The board was superseded in 1930 and one of the first retrenchments was that of 65 useless schools which resulted in a fall in the enrolment, most of this being in the infant class. In the year 1931-2 fees were re-imposed, the rates being :

						As. p.
Infant cla	ss					1 0
Class I				••		10
,, II	••	••	••	••	• • -	10
,, III	••	••	••	••	••	2 0
,, IV	••	••	• •		••	20

There was a drop of some 900 children but the income of Rs.10,514 justified the imposition. In the following year the children came back in full numbers and a permanent income of Rs.10,389 is now secured to the board.

7. In Unao where no fees had been charged for many years there was a drop (partly due to smallpox) of 1,500 in the enrolment when in 1932 fees were once again reimposed. The numbers, however, rose next year and are now at their maximum while Rs.9,000 are available from fees from those classes. The fees levied are:

						ns. p.
Infant class	••				••	1 0
Class I	••	••	••	••	••	1 6
,, II	• •		• •	••	••	1 0
" <u>111</u>	•••	••	••	••	••	20
., IV	••	••	••	• •	••	~ ~

In Bara Banki District when fees were imposed in 1932 the enrolment dropped from 17,687 to 16,946 while fee income rose from nil to Rs.5,000. In Gonda Rs.6,000 new income was obtained by the imposition of fees and the enrolment did not drop. It may, therefore, be taken as proved that the imposition of a reasonable fee will not deter boys from coming to school. I, therefore, advocate that any permission to give free primary education—except in areas under compulsion—be withdrawn and that all boards shall be required to levy fees according to a new rule. My reasons for demanding a fee are I think cogent.

(i) District boards are, almost without exception, unable to finance any scheme for educational improvement. New buildings, repairs of buildings, equipment of schools and training of teachers are all suffering from lack of funds. From lack of funds the boards are unable to perform adequately other duties, e.g. maintenance of roads required by statute. It is reasonable therefore that income from school fees should be made available in order that the board may perform its duties.

(ii) It is not in the public interest that those who can afford to pay the small sum demanded in the primary classes should be freed from the cost of the education of their children.

(iii) Absence of fees has transformed our schools into créches. There is no responsibility involved in the admission or withdrawal of a boy.

(iv) A fee, even a very smallone, will tend to stop fictitious enrolment. It will also improve average attendance.

(v) On the principle that what costs nothing is thought nothing of, the imposition of a fee is desirable.

(vi) The money is to be had for the asking and the sums are more than substantial.

8. I suggest the following scale of monthly fees as a minimum for primary and preparatory schools:

						As.	p.
Infant class			••		••	0	6
Class I			••	••		1	0
, II		••	••	••	••	1	0
,, III	••	• •	••	••	••	2	0
,, IV	••	• •	••	••	••	2	0

Further, that exemptions from fees be limited to 25 per cent. of the enrolment of each school and that no half rates should be allowed. I submit that the fee scale is modest and the exemptions adequate. Table no. XIX shows that many boards are already charging fees approximating to this scale. Most of the chairmen of the education committees agree that 25 per cent. is a sufficiently liberal margin for exemption.

9. Whilst Government prior to the financial depression were not averse to an experiment with free primary education they were always clearly averse to free education in vernacular middle schools. Table no. XIX shows, however, that District Board Educational rule no. 45 is not being complied with. Instead of six annas, four annas is frequently charged. I suggest that boards be required to charge a minimum of six annas in the vernacular middle schools and that 25 per cent. as a maximum of the enrolment may be exempted from payment of fees.

10. If my proposals are accepted there will be a great increase in the income of certain boards. I estimate that District Board, Allahabad, will have Rs.15,000 per annum from this source alone whereas the figure to day is nil. Etawah is expected to get Rs.9,000; Pilibhit, Rs.5,000; Partabgarh, Rs.10,000; Fyzabad, Rs.10,000; Agra, Rs.9,000; Shahjahanpur, Rs.7,000 per annum while other boards will enhance their income substantially, e.g. Benares by Rs.6,000, Azamgarh Rs.7,000, Jaunpur Rs.5,000, Fatehpur Rs.3,000. There is no hardship involved in this small domand. Inability to pay fees is clearly disproved by the figures from Rae Bareli, Unao and Bara Banki. In municipalities where compulsion is in vogue, there is a marked drop between class II and class III and the explanation usually given is that boys leave the free education under compulsion to follow education in anglo-vernacular schools where fees are charged. In all our primary schools we have large numbers of elderly boys staying on in school although they ought normally to be in the world learning a trade. I am persuaded that the money is there, that it is needed by and should be secured for the district board, and that no hardship will ensue from the enforcement of the proposed rule.

11. Enhancement of fees as proposed by me will yield close on Rs.1 lakh of recurring income to the boards. As an inducement to boards to levy fees I suggest that Government pass an order securing for a limited term—say 5 years—to the education committee all sums accruing from fees in excess of the income from that source in 1933-4. I desire to secure that if not the whole, at least a substantial share of the new income shall be put at the disposal of the education committee to be spent on educational objects.

I was often told by chairmen of education committees that they were dissatisfied with the allotment of the expenditure between the six heads of the budget. I realize that unless a board maintains an expenditure under a certain head the education under that head is bound to suffer. There are however, anomalies in many budgets. Azamgarh spends Rs.13.620 on female education. Ballia spends Rs.1,960. Jaunpur spends Rs.22,550 on Islamia schools and maktabs. Benares with an equal budget spends Rs.9,100. Allahabad spends 11 per cent. of its budget on vernacular middle schools. Muzaffarnagar spends 24 per cent. Chairmen desire to remove these anomalies. I suggest that while keeping the Government grant at its present figure chairmen of education committees may be invited to submit proposals for a readjustment of the figures under the six sub-heads of the education budget and that they may be allowed to use fresh income from fees in readjusting their figures. Such proposals should receive the consideration of Government in preparing the statement of prescribed minimum standard expenditure when the present rontract ends in 1936.

## CHAPTER VIII

#### CLOSURE OF SCHOOLS

In order to discuss the local needs of the various boards I visited each of the seven circles of the inspectors of schools starting on 20th November, 1933, with the Benares Circle. I visited in succession Allahabad, Fyzabad, Lucknow, Bareilly, Agra and finally Meerut Circle finishing the 48th board Etah on 7th April, 1934. In some cases the chairman of the education committee was unable to be present but usually he attended and discussed with me the steps necessary to effect economy. It is idle to expect that my recommendations to close over 2,000 schools will be accepted by the education committees unreservedly. But the chairmen as a body have accepted the principles explained by me in the previous chapters and which I discussed with them at the conferences. They agree that there are superfluous schools which can be closed without detriment to local education and some will in fact welcome an order from Government that these schools should forthwith be closed.

2. At the outset of each conference I was careful to inform the chairman that I had no authority to close a school and that any savings arising from closure of schools would remain with the boards to be used for their educational needs. This latter pronouncement It changed apathy or even hostility into worked wonders. Having explained to the local inspecting staff who were co-operation. present throughout, the principles involved. I went over a list which they had prepared of the classwise enrolment in single teacher schools. From the list I selected numerous examples of unsatisfactory schools, my criteria being mainly (a) low enrolment, and (b) insufficient progress from infant class into the higher classes. The sub-deputy inspector concerned then explained the local conditions affecting each case and the school was either entered in my book for closure or recommended for improvement locally. The list having been exhausted we traversed the maps to discover any school which in the list of schools was numerically satisfactory but which on the maps was geographically superfluous. Action was again taken. Each school of several hundreds received individual consideration. The schools being finished, other topics such as compulsory educationwhere it is in force-buildings, repairs and training of teachers were taken up and decisions reached. I am happy to record that the conferences were, without exception, harmonious and that there was not the slightest untoward incident in the whole tour. I attribute this to the reasonableness and moderation shown on both sides. In the case of schools for special communities, e.g. the Muslims or the depressed classes and schools for girls, I extended special consideration remembering the general policy of Government therein. Where a chairman urged special reasons for the continuance of an otherwise inefficient school saying that it was at a special shrine or that it served a migratory population, his plea was generally accepted. Where the population was sparse I accepted numbers which in denser areas

3. There is no relation between the number of schools recommended for closure and the number maintained or aided by a board. The criterion was individual and was the efficiency of the institution. Accordingly where large numbers of uneconomical or superfluous schools were found the list is long. Where the board had a smaller number or where the schools were working efficiently I had no occasion to recommend closure. The  $6\frac{1}{4}$  per cent. cut which had been made by the boards had in many cases reduced the numbers of schools to be closed.

4. If the boards close all the schools in the lists in appendix "C" the gross saving will approximately be Rs.3 lakhs. As, however, in many cases there will be and there is intended to be a definite transfer of the pupils of a closed school to some adjoining school there will have to be an adjustment of staff. What this will amount to is hard to decide, but I am sure that there will be a definite fall in the enrolment especially in the infant class and before an additional teacher is given the enrolment should be allowed to settle down to a steady level. I anticipate that the number of appointments required to meet the altered enrolment in the residual schools will absorb one lakh of rupees making the net savings, rupees two lakhs.

It is desirable to deal with the retrenchment of some 2,500 5. teachers here. I suggest that orders issue that when giving effect to the proposals for closure, each board should use the opportunity to get rid of the untrained teacher-especially where he is a young man. Next should go the teachers over 55 years of age. They have had their day and may give place to younger men who still have their families to educate. Third to go should be teachers whose work is unsatisfactory, men under whom a school declines. Last of all should go the latest joined trained men, a rare step. This retrenchment will do good to education generally. There are in the service of the district boards 28,944 teachers of whom 24,935 are trained. Of the 4,009 untrained teachers 2,151 are oldish men. We have, therefore, 1,858 untrained teachers of trainable age and these may be reasonably dismissed. In the Allahabad District Board, for instance, there are 340 such untrained men and these should be the first to be retrenched.

6. I suggest that the closure of schools take place from July 1, 1934. The schools will rapidly adjust themselves to the new conditions but in the period of transition new staff should be most sparingly appointed. Every effort should be made to keep the number of schools as low as possible. New schools should not be opened except after most careful consideration. By December, 1934, savings will be visible and district boards should be encouraged to make these savings as large as possible.

7. The savings arising from closure of schools, being of a recurring nature, should be spent on :

(a) provision for repairs and equipment of buildings,

(b) training of teachers,

(c) expansion of vernacular middle education,

(d) extension of provident fund to teachers who are confirmed and do not contribute to that fund,

(e) construction of new pucea school buildings.

8. I need not repeat here the arguments in favour of the first two items. They are to be found in the previous chapters. In favour of expansion of vernacular middle education I have to point out that this is becoming a pressing problem with many boards. One-sixth of the expenditure on vernacular education is incurred on middle schools. There are some 700 vernacular middle schools each on average costing Rs.2,600 per annum and having 120 boys on The state of these schools is graphically described in the roll. Report of the Department of Public Instruction for the year ending March 31, 1933. Everywhere there is a demand for increase in buildings and hostels and everywhere there is a shortage of funds. This shortage of funds is due in many cases to the laxity of the boards. The average fee in class VI is just over annas six, i.e. the minimum prescribed, but 14 boards are charging only annas four. There is therefore room for enhancement of fees here and where boards are short of funds this remedy may first be indicated. The District Board of Allahabad has only 15 middle schools and needs more. But the fee in the primary classes is nil and in the middle schools annas four only. Here obviously the board can work out its own salvation. But even when enhanced fees are charged there is still need for funds. Buildings are now erected from savings accruing under particular heads of vernacular education and savings may not be transferred. The demand for middle schools is so heavy that savings do not accrue. Hence the evil state into which middle schools have fallen. New buildings are not being built and the old ones are being starved. Boards will not or perhaps cannot find the money for new buildings. I suggest that where a board has charged fees on the scale shown by me in Chapter VII, it may approach Government for a non-recurring grant towards hostels and extension of existing vernacular middle schools. This demand might very reasonably be met from the Rs.3 lakhs arising from the  $6\frac{1}{4}$  per cent. cut.

9. The fourth item is dealt with in Chapter XI. I feel that as teachers may be in future retired at the age of 55 it is essential that provision be made for their declining years. At present provident fund contribution is given as a rule only to teachers drawing Rs.20 per mensem or more.

10. Appendix "C" gives for each board the details of schools which I recommend for closure. There are four items in each case, viz. the name of the school, the enrolment (frequently shown classwise when of interest), the savings likely to result from closure and a suggestion for the accommodation of the boys set free by the closure of their school.

# ( 50 )

## CHAPTER IX

## GIRLS' SCHOOLS

1. Table VI gives the number of district board girls' schools in these Provinces and the classwise enrolment. The figures for the United Provinces in March, 1933, were :

			Primary schools	Enrolment
			16	964
• • •	••		993	30,792
••	••		207	16,618
	· • • • •	· · · · ·	· · · · ·	Primary schools 

There is a marked variation in the provision for the education of girls in the districts. Etawah Board provides Rs.12,880 or 6 per cent. of its budget for this head while Jaunpur Board where perhaps this type of education is not so popular provides only Rs.3,790 or 1 per cent. It is interesting to note that in some cases, e.g., Meerut, Benares and Ballia districts, the provision for the education of girls is less than that for Muslims, or for depressed classes. The attitude of the boards to the education of girls may be gauged from the totals in the minimum prescribed expenditure for vernacular education.

Rs.

Ordinary primary schools for boys			72,82,820
Islamia schools and maktabs	••	• •	3,53,040
Depressed class education	••	••	1,47,650
Girls' education	••		3,73,450
Compulsory primary education for boys			6,39,590

2. The cause of the girls has recently been vigorously championed in the Council and considerable attention has been attracted to the needs of the education of girls. It is indeed time that the subject received attention. Yet at the risk of appearing hostile to the cause of the girls, which I am not, I urge that the expenditure of the new funds available for girls' education receive very careful consideration. Multiplication of girls' schools unaccompanied by training of the mistresses and a studied programme of expansion will merely increase the waste which to emphasize the point I quote below :

Enrolment in the District Board Schools for girls

Infant cla	ss					29,868
Class I	••		• •			8,573
,, II	••	• •	••			5,666
" III	••	• •	••	••	• •	2,111
,, I <u>V</u>	••	• •	••	••		1,240
,, <u>V</u>	••	••	••	••	••	265
" <u>VI</u>	••	••	••	••		154
<b>,</b> , VII	••	••	••	••	• •	69
				Total		47,946

As in the schools for boys, so for girls also, literacy is achieved in class IV. But out of the 29,000 odd who begin the course, 1,200 only reach class IV, i.e. one girl in 25. Some consideration is required for the 24 who fail to arrive. No sensible person would be content to run a machine with an efficiency of 4 per cent. Not only the number of the girls in our schools but also the expenditure calls for attention. Cawnpore District Board spends Rs.12,000 per annum on girls' education and in 1932 had in class IV 25 girls. Gorakhpur with an expenditure of Rs.25,000 had 56. These girls were costing Rs.450 each to make them literate. Jalaun had 4 girls and was spending Rs.7,200. Such figures must inevitably make us ask whether we are to advance merely by enlarging the existing machine or whether we are to seek another road.

3. Before proposing my alternative I would like to deal first with the causes of the wastage in our girls' schools. First, I think, comes the inefficiency of the teachers. Out of 916 women teachers in the primary schools of the district boards in 1932-33, 823 were untrained and 792 were uncertificated. The mentality of these teachers can be gauged from the numbers holding certificates.

Passed middle school......40Passed primary school.........51

In the municipalities the case is much the same. There are, however, more trained women in municipalities. The aided schools are in the same plight, 580 of their teachers out of 649 being uncertificated. The doddering old men, who being no longer fit to teach boys are sent to teach girls, are of no use in girls' schools. It is really an insult to girls, that they should be sent there. Here is the root of the disease. The teachers are not fit to do their job. The remedy is to produce and to train educated women to be teachers.

4. The second cause of wastage lies in the conditions under which. these girls work. There are Montessori schools in Allahabad, Benares and in Aligarh. These are excellent institutions but they work at a cost prohibitive when one is considering mass education. The mission schools do good work, housing and teaching their girls in decent conditions. But the bulk of the other schools-apart from the Government schools-are housed in buildings worse if possible than those in which the boys work. The rooms are small, dark and overcrowded. The schools are generally dwelling houses of most inadequate dimensions hidden away in some alley, cloistered from the public view. Perhaps these girls never laugh or play. Certainly no playground is provided. What inducement has a girl to go to such a place ? The critic who inveighs against sinking large sums in brick and mortar should visit some of those wretched places in which our girls are being educated. I very strongly advocate resolute action in building decent primary schools for girls. Where the demand is established there should be a big pucca school with a playground and a wall, not a 10-feet wall to make folk imagine something unusual is being hidden inside, just a wall to keep out goats. The rooms should be airy and commodious. Sanitary conveniences should be supplied

5. I place the blame for the poor results in the education of girls (a) on their inefficient teachers, (b) on their miserable schools. With trained teachers and decent schools, it should follow that girls' education would show some progress. But I am not prepared to advocate merely these necessary reforms. It seems to me that the time has come for co-education and to each of the chairmen of education committees whom I met, I expounded the virtues of co-education and invariably have received his welcome appreciation. Chairman after chairman has admitted that boys and girls can be educated together. Usually there is hesitancy as to the higher limits of age. Doubts are expressed about the wisdom of boys of 13 years in the same class as girls of 11 and I appreciate the difficulty. I am persuaded that no real difficulty exists, however, and that Government should now definitely proclaim their belief in co-education in primary schools. In the Benares Circle the results show what energy and enthusiasm can achieve especially where funds for segregate girls' education are small. In the Ballia District there are 17 girls' schools with 568 girls in them but there are 4,469 girls reading with their brothers. Azamgarh has 3,749 girls reading in boys' schools, Benares 3,491 and Ghazipur 3,844. The Benares Circle stands out from all the others for its high numbers of girls in boys' schools. Co-education works. Even at present, of the 102,331 girls in primary schools 54,877, i.e. more than half are reading in boys' schools.

6. I see no valid reason why co-education should not be practised both in primary and in preparatory schools but as a concession to conservatism and by way of introducing the idea I suggest that it be first started in preparatory schools. Here the children in classes infant, I and II are largely under ten years of age. I bear in mind that in class II most of the children are between 10 and 11 while there are at least 60,000 over 11 years of age. Still this does not deter me from looking on co-education as the correct way to educate the girls. If we start co-education in preparatory schools and get the honest co-operation of the chairmen already promised me, we shall cut down heavily the waste which typifies the working of the lower classes.

In hundreds of boys' schools the enrolment is under 30. The 7. average attendance is 75 per cent. Here without any effort or extra expense whatever, six or eight girls more per school can be educated. There are already in each of our boys' schools an average of three girls. These are usually in the preparatory classes. We need only the impetus of official approbation to get in more. The harvest is plentiful The time is auspicious. When I was axing the boys' schools and ripe. I was careful to leave a school for an area. There is therefore a boys' school in or near the village where the girls reside. If Government approve, a letter may issue advising chairmen of education committees to instruct their local inspecting staff to make every effort to bring girls into boys' schools especially in the preparatory classes. It is in anticipation of such an order that I have left untouched in hundreds of cases schools with an enrolment below 30 which were serving an area but which I should have recommended for closure and have asked the chairman to fill up the vacancies with girls. I believe that in such schools as these, out in the country we have the field where co-education can be successfully worked. In the village, everybody knows every other body and *purdah* is not so strict. The boys and girls run about together and there are no strangers. The Chairman of Garhwal is of opinion that in his district co-education will fill his schools and be of great service.

8. I have in my tour dealt leniently with girls' schools. Only in cases of gross inefficiency, e.g. enrolment under 15 did I suggest they should be closed. There are 6 primary and 23 preparatory girls' schools in an average district. Like the boys' schools they are the children of chance and there has been no attempt to rationalize the supply. These girls' schools should in most cases be kept going, but I do not desire to see their numbers increase substantially. They should be re-designed to take the girls from the co-educational schools and complete their education. The preparatory boys' schools should all be feeders to them. The trouble here is that parents will not let their girls go far from the village without escort. Girls' schools should therefore be sited in biggish villages where they can function properly. For the small country village the boys' primary school will have to suffice and I see little reason why it should not be regarded as a fairly satisfactory solution.

One thing is lacking in the scheme-provision for the tuition of 9. needlework-a subject which one assumes should be taught to all girls. This leads on to the desirability of the woman teacher in the boys' schools. I do not think this is yet a practical proposition. I have repeatedly discussed it with chairmen and inspectors and we all agree. The women are not there to begin with and it is impossible to transfer a woman from school to school freely. Village conditions being what they are, a strange woman teacher has to reside in the school and to suffer much privation. It is a poor life. I suggest that efforts be made to get the wives of teachers trained and use them in schools along with their husbands. In this way the single teacher school would become a two-teacher school. The tuition and results would improve. Provision exists in the Code, paragraphs 354 and 355, for scholarships and stipends for women who intend to become teachers or governesses. This provision should be increased. There should be for instance five stipends per district of the type in Education Code 355(a) (ii) of Rs.4 each to induce women to pass the Vernacular Lower Middle Examination and this stipend should be awarded by the circle inspectress who knows the need of the district and the possibility of the stipend serving its purpose.

10. In addition, the training of women teachers should be expanded. The school at Allahabad needs buildings and funds. New • training classes should be encouraged. A class for training teachers in sewing and cutting out similar to that recently started in Allahabad should be attached to each Government normal school for girls and women teachers should be trained in this essential subject.

11. Compulsory primary education for girls will shortly be introduced. There are three points on which I desire to make recomendations:

(1) No scheme should be sanctioned until the buildings in which the girls are to be taught have actually been built, inspected and before use approved by the circle inspectress.

(2) No attempt should be made in the first year to enrol all the girls liable. In the first year of compulsion only the lowest of the years liable should be brought into school. In the second year two years of girls and so on till in the fifth year of compulsion five years of girls should be in school.

(3) Existing institutions in which girls are being taught at present should not *ipso facto* be included in the scheme. The scheme should assume a clean start and only those schools should be accepted for it which satisfy the circle inspectress on the score of accommodation, staff, equipment and efficiency from the point of view of compulsion.

These three recommendations are the result of visits to several. primary schools, both boys and girls.

Unless the first recommendation is accepted we shall condemn 12. hundreds of girls to an existence little better than prison. If compulsion for girls is to start let it start aright. Let us steadily refuse to pour new wine into old bottles. Let us demand decent buildings for The existing ones merely have to be seen to be condemned. the girls. The second recommendation aims at avoiding the dead weight of those girls who by a rigorous application of compulsion would be forced, into school but could never hope to achieve literacy within the terms of compulsion. Further, the stepwise progression from year to year will enable boards to provide the trained staff required, instead of starting as in the boys' case with large numbers of untrained and useless teachers.

The third recommendation aims at a considered allocation of schools to the area under compulsion. It is unsound policy to take over schools simply because they exist. A map of the area should be requisitioned and the necessary schools fixed by the circle inspectress. An attempt should be made to secure large and efficient schools. Small single teacher schools should be definitely refused recognition under compulsion even though they are recognized at present. Only where a school is capable of working up to an efficient economic unit should it receive recognition.

13. I make these recommendations because the lack of success which characterises compulsory primary education for boys is undoubtedly due to a failure to exercise those precautions at the start. Voluntary education of boys is giving us a literate outturn of one boy in five, compulsion between 1 in 20 and 1 in 100. Voluntary education of girls gives a literate outturn of 1 girl in 25. If we start wrong with compulsion for girls we shall get 5 per thousand. I had rather delay the start than start badly.

# CHAPTER X

#### SCHOOLS FOR SPECIAL CLASSES

#### (A) Depressed Class Education

A scheme for opening special schools for depressed classes was outlined in the local Government Resolution no. 1231/XV, dated May 23, 1921. In that year grants amounting to Rs.78,920 recurring and Rs.7,350 non-recurring were distributed to district boards for this purpose. A scheme for further expansion was undertaken in 1922-23 when additional grants of Rs.15,000 recurring and Rs.2,970 nonrecurring were given. These grants were merged in the contract grant when the contract system was started in 1924 and the present prescribed minimum expenditure on this head for the period 1931-36 is Rs.1,50,000 approximate.

In 1932-33 there were 757 special schools for depressed classes  $\mathbf{2}$ . with an enrolment of 18,443 depressed class boys. There were, however 9,267 boys of higher castes in these schools. The average enrolment of these schools was 24 depressed class boys and 12 boys of other castes. Against these 18,443 there were 88,282 depressed class children reading in ordinary schools, a ratio of nearly 5 to 1. It was pointed out in the report for the quinquennium 1927-32 (page 85) that notwithstanding the increase in population there had been a reduction of boys attending depressed class schools and an increase of those attending board schools; 84 per cent. of the total number of depressed class school attendance were in ordinary board schools as compared with 75 per cent, at the beginning of the quinquennium. Comment was also made on the change of attitude towards those children. The quinquennial report of 1927 says that while the necessity for furtherance of education amongst the depressed classes continues as strong if not stronger than formerly, the need of having special schools for the purpose is diminishing. More propaganda work is necessary and more teachers and supervising or attendance officers drawn from those classes are required for the purpose.

3. Chapter X of the Hartog Report deals with the education of the depressed classes. The conclusions, pages 226-228 are of great value. They say "We concur in the view of the Director of Public Instruction in the United Provinces that the single mixed primary school is the most economical and the most efficient type of primary institution. These special schools therefore should be regarded as institutions of temporary expediency, which will serve the purpose of bridging the period until the community agrees that its needs can be fully served by the mixed school and is willing to use that institution and to allow it to be used without let or hindrance by all classes of the community." The Wetherill Committee Report (1927) recommended the establishment of ordinary board schools rather than the creation of schools ignominiously labelled "depressed class schools."

4. I have sounded all the chairmen of education committees whom I met on this subject. The chairmen are practically unanimous that the depressed class school should be abolished. Some said that they maintained such schools only because they were compelled to make financial provision for them. My own view is that the depressed class school will soon be no longer needed. The awakened class consciousness of the depressed classes is now sufficiently strong to secure for their community all the education they desire. Further the prejudice against these classes is rapidly waning. Let us be under no delusion, however, that the prejudice has disappeared. I met one headmaster who had a very strong feeling against the admission of *bhangi* boys in his school. In certain middle schools I found boys from the backward classes but no boy from the depressed classes. There is therefore need for caution.

5. The depressed class school is almost invariably a single teacher school, a school of low enrolment and a school where the enrolment is of the type:

					$\mathbf{Enrolment}$
Infant Class					20
Class I				••	5
,, 11	••	• •	••	••	2

The school is frequently a competitor with the local board school for pupils.

6. Table VIII shows that there are 34 primary and 297 preparatory depressed class schools maintained by the boards and 17 primary and 373 preparatory aided, making a total of 721 schools with an enrolment of 22,872 pupils—average 32 per school. It is neither feasible nor desirable to abolish so many schools but I recommend the following :—

(a) When the new contracts are being framed in 1936 the heading in the budget statement "depressed class education" shall merge in "ordinary primary schools."

(b) When the new contracts have been framed depressed class schools working successfully should cease to be called depressed class schools and should become ordinary district board primary or preparatory schools. It must be made clear in the orders that those schools shall be retained as teaching institutions so long as there remain pupils for them and so long as they are doing real service.

(c) Where the depressed class school is inefficient or superfluous it should be abolished, the boys going to the nearest board's school.

(d) A teacher belonging to the depressed classes should not ordinarily be dismissed. If the school is retained, he should be retained with it. If abolished, efforts should be made to provide a post for him in the district board service as a teacher.

He may act as an untrained teacher but special action should betaken to ensure his being trained at an early date.

(e) Adequate provision should be made for the selection, training and the enrolment after training in the district board cadre of pupil teachers from the depressed classes. (One central training school I inspected gave the following castewise enrolment : Brahman 24, Kshattriya 2, Vaish 1, Muslim 2, Chamar 2, Bhangi 1, although the district population contains 90,000 Brahman males, 63,000 Chamars and 66,000 Ahirs). It is difficult to fix a percentage but there is no doubt that there is room for recruitment of larger numbers from the depressed and backward classes. The recent provision of stipends for these classes stipulated for one depressed class student at least in a training class. Chairmen should be asked not to consider this the maximum.

(f) Savings arising from the closure of depressed class schools should be spent in awarding more scholarships to depressed class boys. This point will have to be watched by the Inspector of the Circle in dealing with the board's budget.

## B-Islamia schools, maktabs and pathshalas.

In accordance with the recommendations of the Piggott Com-7. mittee, Government in their resolution no. 1611/XV, dated the 25th August, 1914, laid down the policy to be followed for the betterment of primary education amongst Muslims. The Islamia school is an outcome of this policy. Rule no. 75 of the District Board Educational rules lays down the conditions for the creation, working and closure of an Islamia school. The criterion is a guaranteed attendance of 20 boys. On March 31, 1933, there were 679 Islamia schools in the United Provinces with an enrolment of 34,541. It is of interest to note that rule 75 is mandatory. "The district board shall open a separate Islamia school." But as funds are limited and as there is a prescribed minimum expenditure for Islamia schools and maktabs the rule is not fully complied with. There is also very considerable variation on the expenditure on this head. Garhwal spends  $\frac{1}{2}$  per cent., Allahabad and Cawnpore 1 per cent., Jaunpur, Bahraich and Bijnor 7 per cent. each of their educational budget on this item. Some chairmen find it difficult to spend their prescribed minimum efficiently and some of the Islamia schools in their districts in many cases should be closed under rule 75. One board, feeling that the expenditure under this head was hardly justified by the returns, definitely assigned a considerable sum to the Islamia school buildings rather than maintain the staff and the schools. The Islamia school follows the ordinary curriculum but the teaching is in Urdu and the staff are all Muhammadans. The tuition in the Islamia school is as good as or even better than that in the boards ordinary school. The staff are usually trained teachers and the equipment is satisfactory. A fair number-12 per cent.-of Hindu boys read in those Islamia schools.

There remain two types of schools which have given me much 8. food for thought in my tour. These are the maktabs and the Hindu pathshalas. The maktab receives a grant under rule 76 of the District Board Educational rules, the Hindu pathshala under rule 79. In the maktab a special curriculum prescribed by the Education Department is followed. For the pathshala it is laid down that the school shall make use of the readers prescribed for the board schools otherwise than for arithmetic and that the standard of arithmetic is not less than in corresponding boards schools. It is of interest that for maktabs the expenditure is included in the heading "Islamia schools and maktabs" whereas for pathshalas the expenditure falls under "ordinary primary schools." Further that whereas the grant-in-aid to an ordinary aided school is hedged about with conditions in rule 70 and limited by rule 71 to one-half of the total salaries of the masters employed, the grants given to maktabs under rule 76 and to pathshalas under rule 79 may according to rule 81 be as much as threefourths of the salaries of the secular teachers. Moreover in rule 81 the qualification of the staff is not specified for pathshalas.

9. The number of maktabs aided by district boards in October, 1933, was 1,232 and of pathshalas 764 (vide table no. VII.) The average enrolment of a maktab is 40 and of a pathshala 30. The maktab and the pathshala alike are single teacher institutions of a highly inefficient character. Sixty per cent. of the teachers in maktabs have no certificate. Thirty per cent. hold the Vernacular Final Examination Certificate. I have no definite information of the qualifications of the teachers in pathshalas but most of them are unqualified.

10. The numbers of Hindu pathshalas increased rapidly about 1926 when certain district boards made large grants for these institutions. I give below some statistics about the most prominent of these:

District Board			Number of path- shalas aided	Amount of aid per annum	Enrol- ment	Aid per school	Aid per boy	
				Rs.		Rs.	Rs.	
Allahabad		••	73	13,140	2,205	180	6	
Farrukhabad	••		97	11,412	2,445	117	5	
Shahjahanpur			63	7,200	1,821	114	4	
Azamgarh	•••		59	11,184	2,301	181	5	

A comparison of the enrolment with the number of pathshalas reveals the low average enrolment of those institutions thus demonstrating their inefficiency. Only in one of the 97 pathshalas in Farrukhabad does the enrolment exceed 30. The average attendance is 23 for the 97 pathshalas. The last two columns show the high cost of such schools. Aided schools seldom receive such sums and in aided schools the aid per boy does not usually exceed Rs.4.

Rule 81 of the District Board Educational rules allows the 11. grants-in-aid to maktabs and pathshalas to be three-fourths of the salaries of the secular teachers. An ordinary aided school may, under rule 71, receive only half these salaries. There is, therefore, every inducement to alter the designation of the school, to add some religious teaching and secure a higher grant-in-aid. This could be offered as an explanation of the large increase of pathshalas in the quinquemium There is little doubt however that the Hindu pathshala 1927 - 32was inspired by a political body. The maktab had been in existence for years as a school where Islamic culture and the Urdu language were imparted. The Sanskrit pathshala was its counterpart on the Hindu side. There was little rivalry between the two for each provided something wanted by the community. The Muslim parent looking to the district board school for Urdu and the tradition of Islam and finding little provision for these sent his boy to the maktab. He had little confidence in a school where his community seldom held a With the Hindu parent things were otherwise, and there was post. little need for the demand which about 1926 became insistent for the opening of Hindu pathshalas. The multiplication of these latter institutions has not greatly benefitted the Hindu community. The difference between a maktab and a district board school is vastly greater than the difference between a Hindu pathshala and a district board school. In these segregate schools, both maktabs and pathshalas, secular teaching is very inefficient. The manager seldom makes contribution to the institution and fees are not usually charged so that the teacher has to live on the district board grant-in-aid.

As a result the post is so poorly paid that only the failures in life and people who cannot get better employment take up the work in such schools. In consequence these schools are of the lowest possible value. Little harm will ensue and much good will be done if a definite policy is followed to eliminate schools which, as institutions, fail to give a sound secular education. I mean that the maktab and the pathshala where enrolment, accommodation and finance are rnatisfactory should cease to get aid from public funds. This is within the competence of the inspecting staff inasmuch as rule 79 states that the grant-in-aid for pathshalas is renewable on the recommendation of the inspecting staff and rule 76 permits a grant to be made to a maktab which is recommended by the provincial inspecting staff. I suggest that these officers be instructed to base their recommendations on a scrutiny of the school on the points laid down in rule 70 of the District Board Educational rules. Where a school is clearly inefficient as a secular institution there should be no recommendation for a grant-in-aid and a Government order should issue warning chairmen that in cases where no grant is recommended no grant should be paid.

12. These segregate schools by secluding boys at the beginning of their school career from the healthy contact and competition with their neighbours do harm to their inmates. Competent authorities pronounce against their continuance. The Hartog Report, page 56, is very clear on this issue. Efforts should be made therefore to discourage fresh segregate schools and resolute steps taken to abolish such schools as are clearly inefficient. At the same time it is essential that provision should be made for the education of the boys who at present read in those segregate schools. Savings from closure of maktabs and pathshalas should be used to extend existing board schools and to improve their staff. Again I quote the Hartog Report, page 204, in this connexion. "It is obvious that if the system of primary education is to be rescued from the waste and ineffectiveness which afflict it, a great effort has to be made and the system of primary schools has to be reorganized."

13. Although ostensibly maktabs and pathshalas have a religious basis there is little doubt that while maktabs were originally opened with a view to religious instruction many of the maktabs and pathshalas opened in recent years owe their existence to a rivalry between Urdu and Hindi. The struggle between those languages has not become less acute of late and chairmen find it difficult to provide reasonably for tuition in both forms of the vernacular. From my visits to schools I saw that this provision exists largely in theory only and in many schools practically no teaching of Urdu exists. The difficulty of writing two scripts on a board or of teaching two scripts to a class is generally more than the ordinary teacher cares to undertake and the pupil in consequence learns one script only. The paucity of Muslim teachers in the ordinary district board schools is to some extent responsible for this state of affairs. There are many boards where, practically speaking, Muslim teachers are to be found only in the Islamia schools. To provide Muslims in Islamia schools and also to put into the ordinary board schools a number of Muslims sufficient to attract Muslim boys will mean a total percentage of Muslim teachers much higher than the percentage in the population of the district. This may be urged as a plea for more favourable treatment to maktabs than to pathshalas. It is open to consideration, however, whether Government should not encourage district boards to appoint to their ordinary primary schools a much higher percentage of Muslim teachers thereby securing the confidence of the Muslim parent and bringing the Muslim boy to a good district board primary school instead of leaving him to waste his time in a maktab.

The higher percentage of Hindu masters in the ordinary district board schools shows that the Hindu parent need have no fear about the maintenance of his culture or language. There is therefore much less need for the Hindu pathshala than for the maktab. But when in a town of any size maktabs and pathshalas of the usual inefficient type exist and reduce the numbers in the ordinary school, no encouragement to inefficiency should be given by paying three-fourths of the cost of an unqualified teacher. On the contrary the grant enhanced by a few rupees will enable the board to put an additional teacher in its own school with resulting improvement in the teaching in the school and if care is taken to secure that the new teacher teaches Urdu—if need be, a Muslim—he will probably attract to the school the boys who otherwise might stay away.

There is yet another aspect of the problem. I found in some 14. districts, societies running large numbers of schools and receiving large grants from the boards. This does not commend itself to me. There is little need for these schools and I had no hesitation in recommending cessation of aid when I found them alongside district board schools. In one instance 27 pathshalas are controlled by a sabha. The enrolment of these 27 institutions is 879 and the average attendance is 651 giving an individual figure of 33 for enrolment and 25 for attendance : clear proof of inefficiency. The pay of the teachers is Rs.521 per mensem towards which the board pays Rs.385. Of these pathshalas 22 are single teacher institutions the bulk of which might very reasonably be closed with a consequent saving of Rs.3,500 to the board. This sum could be used in helping to pay the  $6\frac{1}{4}$  per cent. flat cut, which in this board is being met largely by cutting the pay of the teachers. In another district I found a society which interests itself in the depressed classes busy competing with district board schools for pupils and receiving grants to help it. There is no need for this duplication of the work and the deputy inspector should see that this competition ceases. The aid to the school where it is in competition should be withdrawn and the boys told to join the board school.

15. In many cases Islamia schools appear on the registers of the board with an enrolment just over 20. The average attendance is bound to be under 20 and the school is due for closure under rule 75. I suggest an amendment to rules 75, 77, 78 and 80 of the District Board rules. Therein the term "an attendance of at least 20" should be replaced by "an enrolment of not less than 30." This will force the teacher to get bigger classes and show whether there is any justification for his school.

#### CHAPTER XI

#### MISCELLANEOUS

The district boards' budgets for vernacular education amount 1. The expenditure on the education office of the to Rs.1,09 lakhs. boards amounts to Rs.2,91,000 or a little under 3 per cent. of the budget. There is however considerable variation in this item between different boards. Saharanpur with a budget of Rs.1.92 lakhs spends Basti with a budget of Rs.3.92, twice that of Rs.10.495 on its office. Saharanpur, spends only Rs.8,560 or less than Saharanpur. Azamgarh is able to administer a budget of Rs.3.5 lakhs for Rs.5,839. Six boards, Dehra Dun, Saharanpur, Shahjahanpur, Naini Tal, Gonda and Bara Banki are spending more than 4 per cent. of their budget on clerks. In three of these cases Saharanpur, Shahjahanpur and Gonda Ten boards are spending less than there is room for retrenchment. 2 per cent. of their budget on this item. In some cases the salary of the head clerk has been fixed at a very low figure, e.g. Rs.50 per mensem. It is a doubtful economy to pay inadequate salaries to men who are handling considerable sums of money. In Agra Division, as Inspector, I had proof of this in the finances of one board. I had complaints on my tour also that the better paid posts were kept for the general department of the board and the lower paid posts were assigned to the education section. There are in the offices of the boards 346 clerks, i.e. an average of 7 per board and the average pay is Rs.70 per month. This is quite high enough and I do not think that the clerical staff as a whole are underpaid. But there is need for uniformity in the staffing and pay of these offices. The allotment of clerks for the educational work of the board is provided for in rule 10 of the District Board Educational rules. An effort at standardiza tion.was made in 1929 when the subject was carefully considered and a clerical staff proposed on the following basis :---

 $\cdot$  00001 of the prescribed minimum expenditure.

+.004 of the total number of schools in the district.

+.003 of the number of teachers.

These three items combined should give the requisite number of clerks for the education office.

The scheme would have cost Rs.60,000 per annum additiona expenditure and it was proposed that Government should give certai boards the funds to staff their offices on this basis. Owing to lack o funds no action could be taken. I suggest that the Inspector be aske to look into the expenditure by each board on this item and when expenditure exceeds 4 per cent. or falls short of 2 per cent. he shoul consider whether action should be taken to get the board to bring if expenditure on clerks within these limits, viz. 2 per cent. to 4 per cent. of the educational budget of the board. A rough guide as to the requisite clerical staff of a board is one clerk to each Rs.33,000 in the Educational budget with a minimum of three clerks. On this basis 330 clerks would do the work at present done by 346. Some of the offices were none too efficient. Much depends on the personality of the head clerk.

2. The teachers in the district board schools are district board servants and as such their services are governed by rule 7 of Chapter III in the District Board Manual which says :

"No officer or servant of the board shall be retained in the service of the board beyond April 1 following the date on which he attains the age of 65 years, except for special reasons to be recorded by the board in a resolution, and no extension of service for more than one year at a time shall be allowed in the case of any employee whose age is 60 years or more."

Teachers in my opinion stand in a special category. The bulk of them are of little use past 55 years of age and if they reach 60 they should be regarded as having completed their teaching career. Tably no. XXI shows that there are some 800 teachers over 55 years of age and of these 119 are over 60. I have proposed to chairmen of education committees that teachers should normally retire at 55 years of age and when extension is given, it should be based on the favourable report of the inspecting staff and should be for one year at a time and no extension should under any circumstances be given past 60 years. The chairmen with two exceptions have willingly accepted this proposition. Some boards are already retiring their teachers in this way. I suggest therefore that in the district board educational rules a new rule be inserted to the effect that no teacher shall be retained in the service of the board after he attains the age of 60 years and that while a teacher may be retired on ttaining 55 years of age, he may be retained in service at the discretion of the chairman of the education committee on the favourable report of the local inspecting staff but such extension of service shall be for one year at a time only and no extension shall be given past 60 years. It is within the competence of the board to make such a rule under section 173(1)(j) of the District Boards Act, but I should prefer a new rule by Government order.

3. If the above proposal is accepted it will be necessary to consider whether some amendment should not be made to the provident fund rules for teachers. At present under rule 2 of the provident fund regulations (Chapter III of the District Board Manual) district board servants whose salary is not less than Rs.20 per mensem must subscribe to the provident fund. Other servants are permitted to subscribe. Usually district boards do not allow their teachers receiving less than Rs.20 per mensem to subscribe. It is clear however, that if a teacher is to retire at the age of 55 he must have something to live on. The bulk of district board teachers get less than Rs.20. Under rule 16 of the District Board Educational rules the grades. for assistant masters in primary schools are :

30 per cent. on Rs.17 per mensem.

50 per cent. on Rs.19 per mensem.

20 per cent. on Rs.20 per mensem.

Thus not only the untrained teacher but also the bulk of the certificated assistant masters are deprived of the benefits of provident fund. I suggest therefore that a special rule be made that district board teachers who are trained shall on confirmation be required to contribute to the provident fund at the rate specified in rule 2 of the provident fund regulations.

At present out of the 28,944 teachers in district board primary schools there are some 16,000 teachers including 4,000 untrained teachers who do not subscribe to the provident fund. I estimate that to finance a provident fund for those 12,000 trained teachers the boards would have to find Rs.75,000 per annum or say between Rs.1,500 and Rs.2,000 per board. I recommend that this sum should be debited to the existing prescribed minimum expenditure which should not be enhanced thereby and money found by savings to be made from the closure of schools.

4. I was asked several times to state who is the correct authority to grant extensions of service or to retire a teacher. This point is not specifically mentioned in section 82A of the District Boards Act, nor are the privisos of rule 7 in Chapter III of the Manual perfectly clear. It seems desirable that these powers should be given to the Chairman of the Education Committee and this may be embodied in the new rule specifying the retiring age of a teacher.

5. Among other ways of meeting the 64 per cent. cut, some boards are effecting this economy by withholding promotions to the superior grades. In an eastern circle I was told that in only one board were the correct grade promotions being given. I give below, as a sample, the grades and numbers of appointments in one board :---

Grade in rupees	••	30	<b>25</b>	*22	20	19	*17	14	13	12
Actual appointments	••	19	39	87	29	92	130	33	9	79
Schedule appointments	••	<b>29</b>	43	73	50	126	75	38	16	62

It is clearly inequitable that teachers due for promotion to a higher grade should be denied their advancement and this method of effecting economy should not be permitted. The provisions of District Board Educational rules nos. 12(8), 13, 15, 16 and 18 should be brought to the notice of the Chairman, Education Committee, and he should be required to make the necessary promotions in accordance with those rules. The Inspector should pay attention to this point when scrutinizing the educational schedule of the board.

6. In sub-section (2) of section 65A of the District Boards Act, it is now ordered that the education committee shall have power to sanction contracts for educational purposes but contracts for "special

•These are the lowest grades respectively for head masters and for trained assistant masters in primary schools.

repairs" shall be sanctioned by the board. The term "special repairs" is in places causing trouble. It is evident from paragraph 392(b) of the Educational Code that special repairs are of a non-recurring nature. Such items as re-building a wall or re-roofing a school are special repairs. Special repairs may be debited to the education fund account, and savings may be expended on those items. I have found, however, that where the chairman of the board and the chairman of the education committee were at variance, the term "special repairs" was made a source of contention, each party trying to have the right of awarding the contract. I have not been able to get a satisfactory definition of special repairs but I think that special repairs should be an unusual item. I suggest as a tentative definition that all repairs in excess of 10 per cent. of the capital value of the institution shall be termed special repairs.

## CHAPTER XII

#### SUMMARY OF RECOMMENDATIONS

#### Chapter II

1. The district board survey maps showing schools etc. should be combined into a complete district map. When the present maps are revised girls' schools should also be shown in them. The schools should all be named in Roman type and enrolment shown in different ink for three years. (Paragraph 3.)

## Chapter III

2. The list of circles in which a primary school is to be established should be furnished by district boards to inspectors. (Paragraph 5.)

3. A new paragraph should be inserted in the Educational Code requiring the Chairman, Education Committee, to satisfy himself as to the need for a new school. (Paragraph 12.)

4. A standard form embodying information of the type given in paragraph 166A(b) of the Educational Code should be prescribed for recognition of primary schools. (Paragraph 12.)

5. The Inspector in his yearly tour in the interior of two districts should meet the Chairman, Education Committee, scrutinize the Board's maps for uneconomical and superfluous schools and report to the Director of Public Instruction what action he has taken to eliminate these. (Paragraph 14.)

6. The smallest educational unit should be the two teacher school with a minimum enrolment of 50 boys. (Paragraph 25.)

7. Admission should be limited to July-August yearly. Boys under six years of age should not be encouraged to come to school. Paragraph 175 of the Educational Code should be altered. (Paragraph 29.)

8. Admission should be controlled. Compulsory attendance in place of compulsory education should be tried. (Paragraph 32.)

9. A new condition be added to rule 70 of the District Board Educational rules that no grant shall be made where the school is within one and a half miles from a primary or preparatory school maintained by the district board. (Paragraph 33.)

#### Chapter IV

10. There should be in each Inspector's circle a Government Central Training School. Government should take over the District Board Central Training School, Narwal (District Cawnpore) and establish a new central training school at Basti. The district boards of Gorakhpur, Basti, Meerut, and Allahabad should establish their own central training schools. (Paragraph 7.)

11. Other district boards should be invited to establish joint central training schools. (Paragraph 8.)
12. Stipends should be paid to all students under training. (Paragraph 9.)

13. The heading in the statement of prescribed minimum expenditure should show separately (i) the minimum expenditure for ordinary primary schools in non-compulsory areas, and (ii) the minimum for training of teachers. (Paragraph 10.)

14. Every board should be compelled to provide for the training of teachers, in compliance with rule 25 of the District Board Educational rules, on the scale of 2 per cent. of the cadre at Rs.250 per annum per teacher. (Paragraph 10.)

15. Paragraph 252 of the Educational Code should be amended to secure preference to untrained teachers for admission to training classes; provision of this paragraph should be brought home to the Chairman, Education Committee. (Paragraph 11.)

#### Chapter V

16. Government should retain permanently Rs.3 lakhs arising from the  $6\frac{1}{4}$  per cent. cut and distribute this to boards not getting their share of grant on a population basis. The money should be spent on *pucca* buildings (Rs.3,300 per building) to be allocated by the Inspector and given free, as non-recurring grants to boards, not more than Rs.30,000 to be given to one board at a time. (Paragraph 7.)

17. A register of value of all school buildings owned by boards should be prepared and on this value provision should be made in the district board budget for annual repairs on the basis of 5 per cent. of *kachcha* and 2 per cent. of *pucca* buildings. (Paragraph 12.)

18. Where recommended by the Inspector, Government may give grants to district boards for providing hostels for vernacular middle schools. (Paragraph 13.)

19. An engineer to control the building programmes should be attached to the office of the Director of Public Instruction. (Paragraph 14.)

20. A minimum of  $1\frac{1}{2}$  per cent. of the minimum expenditure prescribed for the respective sub-heads of vernacular education should be provided for recurring expenditure on equipment of schools. (Paragraph 15.)

#### Chapter VI

21. The existing schemes for compulsory primary education for boys in municipalities and in district boards should be revised. Schools should be reorganized. A building programme should be begun. (Paragraph 19.)

22. Compact areas for district boards are required when compulsion is introduced. Compulsion should be applied to an entire municipality. New large school buildings are needed. (Paragraph 20.)

23. No single teacher school should receive recognition under the new scheme for compulsory education. Trained teachers should be employed. (Paragraph 20.) 24. Headmasters of primary schools should not be allowed to act as part-time assistant attendance officers. Schemes should be so revised and new ones so framed as to make it possible to employ a whole-time assistant attendance officer, for whom specific qualifications should be laid down. (Paragraph 20.)

25. Sub-Deputy Inspectors of Schools should learn to check census returns. (Paragraph 20.)

26. A manual of compulsory primary education in Urdu and Hindi should be supplied to compulsory primary schools. (Paragraph 20.)

27. The terms "religious grounds" in section 8(2) of the Compulsory Education Acts and "satisfactory manner" in section 8(3)should be more clearly defined. (Paragraph 20.)

28. Attention of district magistrates should be invited to leniency on the part of magistrates in dealing with cases of defaulting parents under the Compulsory Education Acts. (Paragraph 20.)

29. A minimum fine of Re.1 may be inserted in section 10(1) of the Acts. (Paragraph 20.)

30. School committees should be required to compound cases, where possible. (Paragraph 21.)

31. A post of Assistant Deputy Director of Public Instruction should be created in the office of the Director of Public Instruction to look after, under the Deputy Director of Public Instruction, the working of the schemes of compulsory primary education. (Paragraph 22.)

#### Chapter VII

32. The reference to classes III and IV in rule 45 of the District Board Educational rules should be deleted. (Paragraph 2.)

33. Permission given to any district board to abolish fees in primary schools—except in areas under compulsion—should be withdrawn and all boards should be required to levy fees according to a new rule to be made in the District Board Educational rules. (Paragraph 7.)

34. The following should be the scale of monthly fee as a minimum for primary and preparatory schools. (Paragraph 8.)

						As	р.
Infant	class					0	6
Class	Ι		• •	••		1	0
Class	II		••	• •		1	0
Class	III	••	••	••	••	2	0
Class	IV		••		••	$\dots 2$	0

35. Exemptions from fees in primary schools should be limited to 25 per cent. of the enrolment of each school and no half rates should be allowed. (Paragraph 8.)

36. Boards should be required to charge a minimum fee of six annas in vernacular middle schools and 25 per cent. as a maximum of the enrolment may be exempted from payment of fees. (Paragraph 9.) 37. Education committees may be empowered to secure, for expenditure on educational objects, for a limited term—say five years —a substantial share, if not the whole, of the fee income in excess of that for 1933-34. (Paragraph 11.)

38. Chairmen, education committees, may be invited, when the present educational contract ends in 1936, to submit proposals for readjustment of figures of minimum expenditure under the six subheads of vernacular education, and the boards may be allowed to use fresh income from school fees in readjusting their minima. (Paragraph 12.)

#### Chapter VIII

39. Closure of uneconomical schools should take place with effect from July 1, 1934. (Paragraph 6.)

40. Boards should be asked to submit proposals for utilizing savings arising from closure of schools on (a) recurring expenditure on repairs and equipment of schools, (b) training of teachers, (c) expansion of vernacular middle education, (d) extension of provident fund to trained teachers who are confirmed and do not contribute to that fund, and (e) construction of new *pucca* school buildings (by transferring savings to education funds). (Paragraph 7.)

#### Chapter IX

41. Decent primary schools for girls with playground, etc. should be erected where a demand for such schools is established. (Paragraph 4.)

42. A Government order should issue advising chairmen, education committees, to instruct the local inspecting staff to make efforts to bring girls into boys' schools, especially in preparatory classes. (Paragraph 7.)

43. Efforts should be made to get wives of teachers trained and use them in schools along with their husbands. (Paragraph 9.)

44. Provision for the award of scholarships and stipends to women teachers under paragraphs 354 and 355 of Educational Code should be increased. (Paragraph 9.)

45. A class for training mistresses in sewing and cutting out should be attached to each Government Normal School for girls. (Paragraph 10.)

46. No scheme of compulsory primary education for girls should be sanctioned until the buildings in which the girls are to be taught have actually been built, inspected and before use approved by the circle inspectress. (Paragraph 11.)

47. No attempt should be made in the first year to enrol all the girls liable to compulsion. In the first year of compulsion only the lowest of the years liable should be brought into school. In the second year two years of girls and so on till in the fifth year of compulsion five years of girls are in school. (Paragraph 11.)

48. Existing institutions in which girls are being taught at present should not *ipso facto* be included in the scheme. The scheme should assume a clean start and only those schools should be accepted for it which satisfy the circle inspectress on the score of accommodation, staff, equipment and efficiency from the point of view of compulsion. (Paragraph 11.)

#### Chapter X

49. When the new educational contract with district boards is framed in 1936 the sub-head "Depressed class education" in the education budget of boards should be merged in "ordinary primary schools." (Paragraph 6.)

50. From 1936 depressed class schools working successfully should cease to be called "Depressed class schools" and should become ordinary district board primary or preparatory schools. (Paragraph 6.)

51. Where the depressed class school is inefficient or superfluous it should be abolished, the boys going to the nearest board's school. (Paragraph 6.)

52. A teacher belonging to the depressed classes should not ordinarily be dismissed. If the school is retained, he should be retained with it. If abolished, efforts should be made to provide a post for him in the district board service as a teacher. (Paragraph 6.)

53. Adequate provision should be made for the selection, training and the enrolment after training in the district board cadre of pupil teachers from the depressed classes. (Paragraph 6.)

54. Savings arising from the closure of depressed class schools should be spent in awarding more scholarships to depressed class boys. (Paragraph 6.)

55. District boards should be asked not to aid those maktabs and pathshalas where enrolment, accommodation and finance are unsatisfactory. The inspecting staff should be asked to base their recommendations, under rules 76 and 79 of the District Board Educational rules, on a scrutiny of the schools on the points laid down in rule 70. (Paragraph 11.)

56. Instructions should be issued to chairmen, education committees, that in cases where no grant is recommended by the inspecting staff no grant should be paid. (Paragraph 11.)

57. District boards should be asked to discourage the opening of fresh segregate schools and to take steps to abolish such schools as are clearly inefficient. (Paragraph 12.)

58. Savings from closure of maktabs and pathshalas should be used to extend existing board schools and improve their staff. (Paragraph 12.)

59. District boards may be advised to appoint to their ordinary primary schools a much higher percentage of Muslim teachers. (Paragraph 13.)

60. Grant-in-aid should be withdrawn by district boards from schools managed by *sabhas* or societies where these schools compete with board schools. (Paragraph 14.)

61. District Board Educational rules nos. 75, 77, 78 and 80 should be amended by substituting the words "an enrolment of not less than 30" in place of the words "an attendance of at least 20." Paragraph 15.)

#### Chapter XI

62. The Inspector should be asked to look into the expenditure by each district board on education office and where expenditure exceeds 4 per cent. or falls short of 2 per cent. of the total educational budget he should consider whether action should be taken to get the board to bring its expenditure on educational clerks within these limits, viz. 2 per cent. to 4 four per cent. (Paragraph 1.)

63. A new rule should be made in the District Board Educational rules to the effect that no teacher shall be retained in the service of the board after he attains the age of 60 years and that while a teacher may be retired on attaining 55 years of age, he may be retained in service at the discretion of the chairman of the education committee on the favourable report of the local inspecting staff, but such extension of service shall be for one year at a time only and no extension shall be given past 60 years. The powers to grant extensions of service or to retire a teacher should be vested in the chairman. (Paragraph 2.)

64. A new rule should be made to the effect that district board teachers who are trained shall on confirmation be required to contribute to the provident fund at the rate specified in rule 2 of the provident fund regulations (Chapter III of District Board Manual). (Paragraph 3.)

65. The provisions of District Board Educational rules nos. 12(8), 13, 15, 16 and 18 should be brought to the notice of the chairmen, education committees, and they should be asked to make necessary promotions in accordance with those rules. Inspectors should pay attention to this point when scrutinizing the educational schedule of the board. (Paragraph 5.)

66. The term "special repairs" may be defined as "repairs involving an expenditure in excess of 10 per cent. of the capital value of school buildings." (Paragraph 6.)

#### R. S. WEIR,

ALLAHABAD :

Assistant Director of Public Instruction,

April 30, 1934.

United Provinces.

### **MISCELLANEOUS**

( 107A )

#### G. L. no. V.E.6/XXXVII-36(3) of 1933-34

FROM

A. H. MACKENZIE, Esq., M.A., C.S.I., C.I.E.,

DIRECTOR OF PUBLIC INSTRUCTION,

UNITED PROVINCES,

То

#### THE CIRCLE INSPECTORS OF SCHOOLS,

UNITED PROVINCES.

Dated Allahabad, April 13, 1933.

SIR,

I HAVE the honour to say that it has been decided that a survey of the facilities for vernacular education for boys in areas other than municipal areas shall be made.

2. To this end, each sub-deputy inspector will at once prepare a map of his circle, scale one inch to a mile, as in the enclosed instructions.

3. One object of this survey will be to show clearly which schools are uneconomical or superfluous. The deputy inspector will invite the attention of the chairman of the education committee to such schools, and put up to him proposals for abolishing such schools and utilizing the money so saved on other schools.

4. Copies of this letter and its enclosures are sent herewith for distribution amongst the district inspecting staff in your jurisdiction.

#### ( 108A )

5. A report showing the progress made in the preparation of the maps hould be sent to this office in the following form on or before June 15, 1933:

Serial num- ber	Nare of district	Number of sub-deputy inspectors	Number of circle maps; prepared	Number of circle maps still remaining to be prepared	Reasonss for the delay in preparing the maps shown in column 5
1	2	3	4	5	6
i					]

I have the honour to be,

#### Sir,

Your most obedient servant,

#### A. H. MACKENZIE,

Director of Public Instruction,

United Provinces.

G. E. N. V.E.7/XXXVII-36(3), dated April 13, 1933

Cory forwarded for information to :

(i) Commissioners (of Divisions, United Provinces.

ii) Dstret Magistrates, United Provinces.

(ii) Claimen, District Boards, United Provinces.

A. H. MACKENZIE,

Director of Public Instruction,

United Provinces.

Instructions for the preparation of maps showing the disribtion of boys' schools in a district, in accordance with the Director of Public Instruction's General letter no. V.E.6/XXXVI.--36(3), dated April 13, 1933

1. Each sub-deputy inspector will prepare a map of hs circle on the lines indicated below. He will take the ordinary one nch-toa-mile map of his district and copy out the map of his circle-either on tracing paper or cloth or on ordinary or tissue paper. He will mount it so that it is not liable to be torn: Roads, ralwy lines, canals, villages, and physical obstructions, such as ravines, illocks, and jungle which hamper communications should be show on it. Rivers will be shown in blue, public roads in red. Municipalies and all towns and villages with a population of over 1,500 shuld be named. Smaller villages should be shown by a dot.

2. When the map is copied, the sub-deputy inspector vill show on it by signs, the different kinds of boys' schools. A list of he signs to be used is given below.

3. Each sub-deputy inspector shall prepare two copie of the map. He will send one copy to his deputy inspector and shall keep the other himself. The deputy inspector will lay the nap so prepared before the chairman of the education committee.

Signs to be used to show the various types of boys' vernaula schools in the maps to be prepared by sub-deputy inspectors d shools in accordance with the Director of Public Instruction's gneal letter cited above

I. (1) Schools housed in a *pucca* building will be showr in ed.

(2) Schools housed in a kachcha or borrowed building will be shown in blue.

(3) The sign for a school maintained by a board wil be surmounted by a triangular flag.

(4) The sign for a school will be encircled once is rel if the encolment is under 50 and twice in red if it is under 30.

(5) The enrolment of each school will be entered within the sign denoting it.

(6) Areas in which compulsion has been introduced will be shadled in black lead pencil.

#### ( 110A )

(7) An unaided, but recognized school, should have letters against it to show its class, e.g. L. P. if it is a lower primary school, M. if a maktab, P. if a Hindi pathshala, or M. S. if a middle school, etc.

(8) The signs to be used for boards and aided schools are-

(1) Lower primary schoolO(2) Upper primary school□(3) Islamia school, lower primary○(4) Islamia school, upper primary○(5) Maktab△(6) Hindi pathshala○

For an unaided, but recognized school, the sign will be  $\bigcirc$ 

2. Examples of how the signs will appear are :--

(7) Middle school

Aided lower primary school, in a kachcha building, enrolment 29.

Upper primary school, maintained by the board, in a *pucca* building, enrolment 80.

Islamia lower primary school maintained by the board, in a kachcha building, errolment 550.

#### (111A)

Islamia upper primary school, maintained by the board, in a *pucca* building, enrolment 85.

Maktab, aided, in a kachcha building, enrolment 35.

Hindi pathshala, aided, in a *kachcha* building, enrolment 48.

Middle school, aided, in a kachcha building, enrolment 62.

Middle school, maintained by the board, in a *pucca* building, enrolment 168.

tés

Unaided but recognized school, enrolment 25. (Letters to be added to show its class.)
## Report on Compulsory Primary Education for Boys in Allahabad District

*Hisry*—Compulsory primary education for boys was introduced with eject from 5th May, 1928 (vide G. O. no. 724/XW—1362, datted March 15, 1928).

Score—The scheme applies to 88 village areas, selected, I was told, a each had at least 1,200 inhabitants. The following six areas, however, of these areas are so small that the preparatory school which has been opened there has not been able to develop into a full primary school

	Name o	of areas				P	opulation
۱. 2.	Monabatr Monabatr Pirdra-Sa	bur-Painsa bur-Painsa habanpur	•••	::	••	::	<b>1,44</b> 8 1,230
3. 4.	Sadho Purab-Sa	- mire.	••	••	••	••	1,217
5.	Alwalpur	Thamba	••	•••	••	• •	1,295 1,267
0. Nunb	er of sch	mpur pols—Th	ere are	 124 :	schools in	 the 88	areas :
Bo Bo	ard's prim	ary school watory sch	s iools	 	••	• •	$82 \\ 9$
Ai	ded schools	(primary	and prepa	aratory	7)		7 24
Pa	chshalas	·•	••	••	••		2
					Total		124

The average attendance of 7,057 boys of compulsory age gives an average enrolment of 57 boys liable to compulsion per school, a number much 500 small to give efficiency. There are 32 single teacher schools.

Teachers-The figures are :

		Rs.
Head teacher	17 at Rs.30 per mensem 22 at Rs.25 ,, 43 at Rs.22 ,,	2,006 per meinsein
Trained assistants	34 at Rs.20 ,, 68 at Rs.19 ,, 51 at Rs.17 ,,	
Untrained assistants:	144 at Rs.14 ,, 1 at Rs.13 ,, 41 at Rs.12 ,,	2,521 per meensem

Total number of teachers=421 costing Rs.7,366 per mensemi or Rs.88,392 per annum for salaries : a costly affair. The scales of annual proposals were no in force throughout the 12 months. Hence the figure of budget allotment is mot equal to that of annual proposals.

The budget albtment for salaries is Rs.95,522 out of which Rs.87,,382 are spent on the alaries of teachers (including provident fund) and the remaining Rs.8,140 are spent on paying "allowances" to assistant attendance offices, i.e. to the headmasters of schools. The system of willage area schools has led to waste and inefficiency. There are

## ( 113A )

421 teachers giving one teacher to 17 boys in average attendace or  $3\cdot 3$  teachers to a school for 57 boys of compulsory age. The teachers do no propaganda work as was hoped from them. It to be borne in mind that the boys in those schools are only partly empulsory. There are 13,611 boys in these 124 schools, the class-we distribution being :

Infant class		••	• •	••	••	7,683
Class I		••	• •		••	2,129
., 11		••	• •		••	1,395
<u>, 111</u>		••	• •	••	• •	1,392
"IV	• •	••	• •		••	1,012

Several boys aged over 11 are to be found in classes II, III ad IV. Convinced that the schools were heavily overstaffed I examied the figures for groups of schools in the circles of various sub-depuy inspectors of schools. My findings are below :

Nu	mbers of co sory schoo	ompul- ols	Enrolment	Average attendance	Teachers employed	My allot- ment of teachers	lxcess imber of tchers in t, schools

28	••	••	2,832	2,534	107	90	17
81	••	••	11,221	8,212	<b>3</b> 56	305	51

There is thus overstaffing in the compulsory areas to the etent of 15 per cent. Out of 421 teachers 60 men can be discharged an these should be discharged in May, 1934. These 60 men should be taken from the untrained hands who number 186. Instead of the starbeing reduced, their numbers are actually being augmented and the tachers now (January, 1934) being appointed are untrained men. Tis has been done without considering the cases of schools which havesuperfluous men in relation to their enrolment. No attempt is bein made to effect economy.

Numbers—The scheme as prepared by Pandit Ladly La, te subdeputy inspector of schools in 1927, showed 14,664 boys liable to compulsion. The figures submitted in the school census, 1933–34 taen by headmasters, i.e. assistant attendance officers is 11,54. Some 3,000 boys seem to have disappeared.

The recent school census is not satisfactory. I checked some village areas by the population and got results at variation with the returns of those headmasters.

Sarho: Tahsil Sirathu (population 1,217) was estimated in 927 to yield 55 boys and now only 4.6. My figure is 75. Makud Tahsil Soraon) with a population of 1,362 was estimated to yield 17 boys in 1928 but only 59 now. My figure is 85. Lawain (Tahsil Karchhana) with 1,214 souls was noted for 78 in 1928 but now only 59. My figure is 75.

I therefore reject the figure of 11,524. The number of boys liable to compulsion is much higher-probably in the region of 14,000 boys

This census taking by headmasters is unsatisfactory. Wholelsales evasion is the rule.

Enrolment—But even with 11,524 as our liabilities there are only 9,278 on roll. There are therefore 2,246 boys to be accounted for; of these 528 are exempted; 1,718 are escaping. This figure is wholly unreliable. The number escaping compulsion is nearer 4,000.

Assistant attendance officers - The headmasters of schools are the assistant attendance officers. Originally they received an allowance of Rs.5 per mensem but in December, 1932, the Deputy Inspector submitted that a flat rate did not equitably compensate the head master of a large school for the extra work involved. He therefore proposed to the Education Committee that headmasters with a total enrolment—compulsory and non-compulsory boys--under 50 should get no allowance; from 50 to 150; Rs.5 per mensem; from 150- 250 Rs.10 per mensem; over 250; Rs.15 per mensem. This proposal was accepted by the Education Committee and as a result allowances of over Rs.8,000 per annum are being disbursed, i.e., nearly Re.1 per boy or the maximum permissible. The effect of this proposal has been to bring large numbers of non-compulsory boys into the infant class to swell enrolment.

I have no good word for the system of making headmasters, assistant attendance officers. They neglect their tuitional duties and impose additional work on their staff. The rewards are out of all proportion to the salaries. A headmaster on Rs.30 per mensem receives Rs.15 per mensem as allowance. The cost is excessive. The following objections can be urged on this scheme against the practice :

(i) Discontentment among assistant teachers as they get noallowance while they do all the work.

(ii) Allowances are not given on the figure of enrolment of the boys of compulsory age only.

(iii) Quarterly changes in allowances on the basis of the figure of total enrolment cause extra work in office.

(iv) The teachers serving in non-compulsory areas try to come into the compulsory area schools.

(v) Bad workers in compulsory area schools who happen to be in favour, are kept there for the sake of allowances.

These masters act as Census officers also. Their efficiency is to be judged by the figures of boys liable to compulsion. The Deputy Inspector in submitting his original scheme based it on 14,664 boys. These figures are now reduced to 11,524 and no explanation offered. The census is not reliable. No effort is made to correlate it with the Imperial Census figures for population or to check it against the village returns of births. The census roll is not checked by the sub-deputy inspectors of schools and cannot be accepted as accurate.

Class-wise distribution of boys of compulsory age (1933-34)

Imfant class	Ι	II	III	IV	$\mathbf{T}$ otal
66,988	1,374	576	258	82	9,278

The class-wise enrolment of boys of compulsory age since the inteptiom of the scheme is given below :

Year		Infant class	I	Π	111	IV	Total
(928-29) 1929-30 1930-31 1931-32 1932-33	••	3,701 4,254 6,988	1,154 1,439 1,374	Not avai 610 737 576	lable. 229 321 258	70 106 82	5,764 6,857 9,278

The class-wise enrolment of boys of all ages in the compulsory schools is given below :

Infant class	I	п	111	IV	Total
 · _ · · · · · · · · · · · · · · · · · ·		Not ava	ilable.		
 5,564	2,533	1,322	1,018	676	11.113
 4,980	2,042	1,376	1,079	688	10,165
 5,007	1,751	1,189	1,161	662	9,770
 7,369	2,389	1,217	1,297	909	13,181
 7,683	2,129	1,395	1,392	1,012	13,611
· · · · · · · · ·	Infant class 5,564 4,980 5,007 7,369 7,683	$\begin{tabular}{ c c c c c c c c c c c c c c c c c c c$	$\begin{tabular}{ c c c c c c c c c c c c c c c c c c c$	$\begin{tabular}{ c c c c c c c c c c c c c c c c c c c$	$\begin{tabular}{ c c c c c c c c c c c c c c c c c c c$

The reasons for this unsatisfactory state of affairs are said to be :

(i) No supervision or action against defaulters prior to 1932;

(ii) Allowances to headmasters were increased and they brought im boys who were allowed to stagnate;

(iii) Magistrates did not take sufficient interest or inflict adequate fines;

(iv) Teachers were ignorant of the rules;

(v) Tuition was poor.

Expenditure

Veer	Recu	rring expendit	Non-recurring expendi- ture on—		
	Estimated	Actual	Savings	Buildings	Equipment
	Rs.	Rs.	Rs.	Rs.	Rs.
928-29     929-30     930-31     931-32     932-33	$1,17,070\\1,28,000\\1,28,000\\1,27,480\\1,21,560$	73,370 97,513 1,03,690 1,04,734 1,10,066	43,700 30,487 24,316 22,746 11,494	 2 <b>7</b> ,963 33,878 14,587	7,800 2,159 9,570  592

The cost or head on the gross enrolment is Rs.9 per annum. If the cost is ivided among the boys of compulsory age only, as contemplated in he scheme, the annual cost per boy on roll would be Rs.11. On te basis of 82 boys in class IV, the expenditure of Rs.1,10,065 tracke them literate gives Rs.1,340 per boy.

Tuitional onlition—There are 9,278 boys on roll liable to compulsion. These is now in its sixth year. There are 6,988 boys out of 9,000 dd im the infant class. Out of 9,278 only 82 are reading in class IV.

Compulsor elucation aims at achieving literacy by compelling a boy to atend school. By compulsion also we should achieve economy inamuch as the classes should be full and the labours of a teacher confied to one or at most two classes instead of being diissipated over inint class, classes I, II and sometimes III and IV.

In Allahaad compulsory areas none of these aims is achieved. The boys arenot becoming literate. The expenditure is higher than in areas whe, elucation is voluntary. The tuitional condition is everywhere  $w_{rse}$  than in the free areas.

I think that the scheme was conceived hurriedly and sanctioned in a spirit of stinism. It is a gigantic failure.

The preset shome should now be ended. My recommendations are :

(a) Te 30ard should be required to show cause why the scheme antioned in G. O. no. 724/XV-1362, dated the 1.5th March, 921, should not be cancelled.

(b) N further addition to staff should be permitted and no new buildings in an area under compulsion should be beg;un. Those uder construction should be completed.

(c) The Deputy Inspector of Schools, Allahabad, should be instructed to draw up a scheme for compulsory primary education in hree areas:

One north of the Ganges.

, in the Doab.

, south of the Ganges.

Thee areas should be compact, easy of access, should include where possible the area where compulsion has been making a clear advance in numbers and in good buildings and they hould be of such a size as can be administered by one assistnt attendance officer to each area. Such areas have been indicated to the Deputy Inspector of Schools by me.

(d) De illowance should be made for the maintenance of those scools, which will be released from compulsion, where under emplaison an adwance in numbers is clearly established. This wil reduce the sum available for the future scheme. The new scleme should, however, give Government substantial savings. Some of this can be returned to the Alla abad District as an additional recurring grant for vernacular middle education. (e) The new scheme should be of modest dimensions. I suggest not more than 2,500 boys liable to compulsion in each area---a number which an energetic attendance officer can deal with when things settle down.

(f) If rapid action is taken, the change over from the old to the new can take place on 1st July, 1935, without loss.

(g) In the new scheme compulsion shall be taken to mean compulsion and the scheme should be rigidly framed. Recognition of aided schools, maktabs and pathshalas should be most sparingly given. The untrained teacher should be ruthlessly pushed out. The Inspector should be instructed not to recommend the new scheme unless he is fully assured of the efficiency of every proposed school therein. No single teacher institution should on any pretext receive recognition. Every effort should be made to secure large well-built primary schools with large numbers, say 200 to 300 and to this end smaller schools should be suppressed and boys compelled to walk if necessary 2 miles instead of being allowed to attend an inefficient little school in their own hamlet. This means a building programme. Without suitable buildings compulsory education will continue to be the failure it is at present.
