CENTRAL STATISTICAL ORGANISATION DEPARTMENT OF STATISTICS AND PROGRAMME IMPLEMENTATION MINISTRY OF PLANNING AND PROGRAMME IMPLEMENTATION GOVERNMENT OF INDIA NEW DELHI Control & DUBUMENTALIUM MERTIN Carrier and Adam Friday 1. B. Sterner Adam Friday 1. B. Sterner Adam Friday 1. Debe 1899 D-10332 1. No. 08-11-99.

PREFACE

During the last 50 years of independence, the country has taken long strides in the sphere of socio-economic development through sustained planned development efforts. It has been the endeavour of the Central Statistical Organisation (CSO) to provide relevant and up-to-date socio-economic statistics being generated by different Government and other organizations to planners, policy makers and research scholars on a single platform for critical assessment and evaluation of various developmental programmes being implemented in the country. The present volume of the publication "Selected Socio-Economic Statistics, India", seventh in the series of such publications since its inception in 1987, is an effort in this direction. A very positive response from users of the publication has encouraged us to continuously expand and improve the coverage and quality of the publication over the years. With this issue, the publication has been made most up-to-date and previous backlog has been liquidated.

2. In the present issue, an attempt has been made to enlarge the number of indicators by including 18 additional tables on various areas of social concerns. A new chapter on International Comparisons containing Human Development Index (HDI), Gender Empowerment Measure (GEM) and Health Profile of the population of selected developed countries and the South Asian Association for Regional Cooperation (SAARC) countries has also been added. Data given in this chapter will help the readers in attempting comparison of Indian situation with some other countries. A commensurate number of Graphs and Charts have also been added to make the presentation of data more user-friendly. These changes, I hope, would make the publication more useful and informative.

3. Our endeavour would not have borne fruit but for the willing support and cooperation of various data source agencies by way of supplying desired data / information which is the latest available on the subject. I thank all of them for their help and ready cooperation.

4. The publication has been prepared in the Social Statistics Division of the Central Statistical Organisation under overall supervision and guidance of Shri R. L. Narasimhan, Deputy Director General. Dr. R. N. Pandey, Joint Director, took keen interest in enlarging the scope of the publication and improving its presentation. He was ably assisted by Dr. Vidya Dhar, Deputy Director, Shri Suraj Bhan, Assistant Director, S/Shri Ajay Rawat and Rajesh Panwar, Junior Investigators, Ms. Chander Tara and Shri Gurdeep Singh, Senior Computors in preparation of the manuscript. Shri Bechu Bhagat, Stenographer, provided excellent stenographic assistance. All of them deserve my sincere thanks and appreciation.

5. I am sure that the present issue of the publication, like its previous issues, would be useful to planners, policy makers and research scholars in understanding, in all its dimensions, the socio-economic changes fast taking place in the country. Any suggestion from users regarding improvement in coverage and presentation of the publication would be highly appreciated.

New Delhi April, 1999 (M. D. Asthana) Secretary Department of Statistics and Programme Implementation

* The reference date in 1971 census was 1 April 1971. In working out the decadal variations for 1961-71 and 1971-81 the change in reference date in 1971census has been taken into account.

** In 1981 Census the reference date was 1 March 1981 In all states except Jammu and Kashmir where it was 6 May 1981. No Census was conducted in Assam in 1981. However the interpolated population of Assam has been taken into account in calculating the growth rates.

The 1991 census in J & K could not be conducted. However, the projected population has been taken into account for the state in calculating the growth rate of All India.

\$ While working out the density of India, Jammu & Kashmir has been excluded as comparable figures of area and population are not available for the state.

@ The 1981 census could not be held in Assam, therefore, for calculating the density of India & Assam, the population figures for 1981 for Assam as worked by interpolation have been taken.

+ For working out the density of India and J&K, the entire area and population of those portions of J&K which are under illegal occupation of Pakistan and China have not been taken into account.

* The 1991 census was not held in J&K. For calculating density of India and J&K, the population figures of 1991 for J&K as projected by standing committee of experts in population projections (Oct, 1989) have been taken.

Source : Annual Reports of National Nutrition Monitoring Bureau(NNMB), Hyderabad

- + Results are based on Repeat Surveys conducted earlier during 1975-79 to study changes in consump tion and nutritional situation.
- @ During 1983 the surveys were conducted on a sub-sample of NSSO 'Central' sample in only four states viz. Andhra Pardesh, Gujarat, Orissa and Tamil Nadu
- Report of NNMB(1993) During the years 1991 & 1992, surveys were conducted on a sub-sample of NSSO 'Central' sample in the states of Kerala, Tamil Nadu, Karnataka, Andhra Pradesh, Maharashtra, Gujarat,Orissa and West Bengal
- Note : During 1981 and 1982, the NNMB surveys were incomplete and hence the results not reported.
 - Report of NNMB (1996) represents the simple average at state level estimates of consumption for the

State of Kerala, Tamil Nadu, Karnataka, Andhra Pradesh, Maharashtra, Gujarat, Madhya Pradesh, Orissa.

Note: For 1981, figures exclude Assam state where 1981 census could not be conducted due to disturbed conditions prevailing there at that time

Based on Population 7 years and above. Age group 5 & above also excludes age not stated. 1991 figures also excluded Jammu & Kashmir as the census was not held in that state.

Table 75 : Educational composition of labour force - India

Source : National Sample Survey Organisation

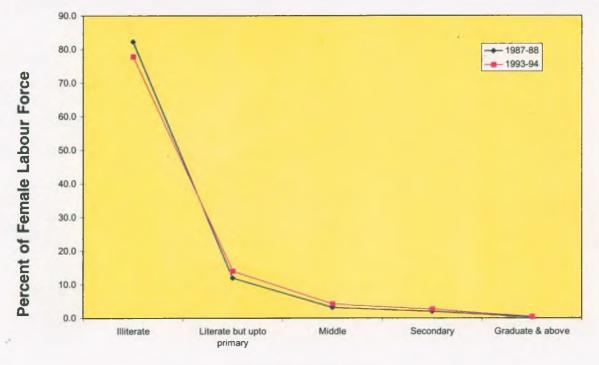

Note : Figures relate to usual status of individuals. Figures for the year 1972-73 and 1977-78 relate to the population aged five years and above while figures for the year 1983 and 1987-88 relate to the population aged 15 years and above. Thus the figures relating to 1983, 1987-88 and 1993-94 would be slightly reduced if the persons in the labour force in the age group of 5-14 are included in the estimation.

Table 78 : Percentage distribution of workers by industry

Source : Office of the Registrar General, India

- Note: 1 Figures for 1981 exclude Assam state where 1981 Census could not be conducted due to disturbed conditions prevailing there at that time.
 - 2 Figures for 1981 are based on five percent sample data.
 - 3 Reference period of all the census is 1st March except for 1971 for which it is 1st April
 - a Including repair service
 - b Includes community, social, personal services and activities not adequately defined
- Manufacturing and repairs
- # The estimates of the number of workers in 1961 for these industry groups relate to adjusted figures based on 1971 Census concepts.
- \$ Includes cultivators and agriculture labourers.

EXPLANATORY NOTES

POPULATION

Table 4 - The three types of growth rates have been calculated as follows:-

Annual arithmetic growth rate

$$(r_a) = \frac{P t+10 - Pt}{Pt} X \frac{1}{10}$$

Annual geometric growth rate

$$(r_{g}) = antilog | \frac{1}{1} (log P_{t+10} - log P_{t}) | - 1$$

| 10 | 10 | 10

Annual exponential growth rate

$$(r_e) = \frac{|\log P t+10 - \log P t|}{10}$$

where P, = Initial population

Pt+10 = Population after 10 years

Table 6 - An urban area is defined as follows:

- (a) All statutory towns i.e. all places within a municipality, corporation, municipal board, cantonment board or notified town area committee etc.
- (b) All other places which satisfy the following criteria:
- (i) a minimum population of 5,000
- (ii) at least 75% of male working population engaged in non- agricultural pursuits; and
- (iii) a density of population of atleast 400 persons per square kilometre (1000 per sq. mile)

The urban criterion of 1981 varies slightly from that of 1961 and 1971 censuses. In that the males working in activities such as fishing, logging etc. were treated as engaged in non-agricultural activities whereas in 1981 they were treated as on par with cultivators and agricultural labourers. The definition adopted in 1991 census was similar to that of 1981 census.

Table 10.- The statutory lists of Scheduled Castes (SC) and Scheduled Tribes (ST) are notified in pursuance of Articles 341 and 342 of the constitution. These lists have been modified, amended or supplemented from time to time. From the 1951 census onwards the census questionnaire contains items of enquiry to ascertain whether the respondent belongs to SC or ST and if yes, the name of the caste/tribe to which he belongs.

133

Table 11- Density of population is defined as the number of persons per square kilometer.

Table 12 - Sex ratio is defined as the number of females per thousand males in the population.

Table 14.- A person is considered to be a migrant if his/her place of enumeration (Village/town) is different from the last (previous) usual residence. The usual residence for the purpose of census is taken to be the person staying continuously for a period of six months or more. However, the visit of married women (staying sometimes more than six months) to their parents house for child birth or for any other reason are not considered as migratory movement. Again, movement from one locality to another within the same town or village is not considered as migration.

Table 16- The Sample Registration System of the Registrar General is a dual record system with the primary objective of providing reliable estimates of birth and death rates for rural and urban areas. The field operations consist of continuous enumeration by local part-time enumerators. Once in six months the supervisory staff, who are full timers, conduct a retrospective survey to arrive at an independent set of vital events which are then matched. The unmatched and partially matched events are re-verified in the field.

Crude Birth rate(CBR) is defined as the number of live births per thousand population in a given year.

Crude Death Rate(CDR) is defined as the number of deaths per thousand population in any given year.

Natural Growth Rate = Crude birth rate- Crude death rate

Table 17- Age-specific mortality rate is defined as the number of deaths in specific age-group per thousand population in the same age-group in a given year.

Table 18- Age-specific fertility rate is defined as the number of live births in a specific age-group of women per thousand female population of that age-group.

Table 19- Infant mortality rate refers to the measurement of mortality in the first year of life and is computed by relating the number of deaths under one year of age to the annual number of live births.

Table 21- The expectation of life at birth is the average number of years expected to be lived at the time of birth if current mortality trends were to continue. These expectations are based on life table derived by comparing the population $p(1) \times at$ age x in one census with their survivors reported at age $p(2) \times +10$ in the next census. From the 10 year survival ratios, for individual years have been estimated. For younger and older ages, special methods have been adopted. With these survival ratios (px) and smoothed-age data, mortality rates (q x) are worked out and the life table is prepared, the last column of which gives the expectation of life at age x. The life tables are also prepared with the age-specific death-rates obtained by the Sample Registration System.

Table 22-The data given in this table are based on the survey conducted by the Office of the Registrar General continuously in selected sample villages having Primary Health Centre (PHC). It adopts the technique of lay diagnosis reporting employing paramedical personnel of the selected PHCs for the field work. During the year 1993, 1407 PHCs villages were covered which reported 29597 deaths. This survey is presently not being implemented in Anadaman and Nicobar, Chandigarh, Daman & Due, Lakshadweep, Mizoram and Sikkim.

ENVIRONMENT

Table 23- Forest land available per person has been worked out by dividing the area under forest, as given by theMinistry of Agriculture by the population figures for the corresponding year. The figures given by the Ministry of Agricul-
ture under Permanent pasture and other grazing land, miscellaneous tree crops and groves not included in net sown
area, cultivable waste land, fallow land and net area sown have been added to obtain the total agricultural land. This was
divided by the rural population figure for average availability of agricultural land for each person in rural areas.Table 24.- This table presents data regarding percentage distribution of the total reported area by land use. The different
categories of land utilisation are as under:-

Forest :- includes area actually under forest or land classified or administered as forests under any legal enactment.

Not available for cultivation:- is land which is absolutely barren for cultivation or uncultivable or covered by buildings, walls, roads, railways, mountains, deserts etc.

<u>Permanent pasture and other grazing land</u>:- cover all grazing land whether they are permanent pastures and meadows or not any village common grazing land.

Land under misc. tree crops and groves not included in net area sown:- includes all cultivable land not included under area sown but put to some agricultural use.

<u>Cultivable waste land</u>:- includes all land available for cultivation but not taken up for cultivation or taken up for cultivation once but not during the last five or more years.

Fallow land: all land which were taken up for cultivation but are temporarily out of cultivation for a period not less than one year and not more than five years.

Net area sown: For computing the net area sown, area sown more than once has been counted only once.

HEALTH AND FAMILY WELFARE

Table 27 - Taking into account the attrition due to aging (going out of the reproductive age-group), mortality and in the case of IUD, additional factors of expulsions and removals, the number of couples currently protected by the different methods of family planning as a percentage of the estimated number of eligible couples in the country gives the percentage of couples currently protected.

Table 36- The figures used in this table are from National Accounts Statistics. Total expenditure on health, education, social security & welfare services includes both current and capital expenditure. Current expenditure includes consumption expenditure subsidies, current transfer to local authorities and other current transfer payments. Capital expenditure includes gross fixed capital formation, changes in stocks net investment in shares, capital transfer to local authorities, other capital transfer payments loans and advances to local authorities and domestic sector. The total expenditure excludes local authorities and consumption on fixed capital The expenditure under education, health etc. include expenditure on administration, regulation and research also. Per capita expenditure has been worked out by dividing the total expenditure by mid year (as on 1st Oct.) population.

HOUSING AND TRANSPORT

Table 42- A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be a household of persons related by blood or a household of unrelated persons or having a mixed of both. Sample of unrelated households are boarding houses, messes, hotels, residential hotels, rescue homes, jails, asylums etc.. These are called institutional households.

Table 48- Houseless persons are those who was found to live on the roadside pavements, in hume pipes, under the staircases, in the open temples, mandumps, platforms etc. These persons are generally counted on the last day of reference period of the censuses.

Table 49- Figures in this table are based on the report of the Task Force on Slums constituted by the Town & Country Planning Organization (TCPO). Briefly, following methodology has been followed for working out the slum population :- In order to achieve a fairly good degree of accuracy the entire urban population in a State was distributed into different size classes of cities/towns on the basis of 1981 census population in the following order;

- (a) cities/towns with population of below one lakhs;
- (b) cities having population between one lakh but below 10 lakh (all Class-I cities excluding metropolitian cities);
- (c) cities with population of 10 lakh and above;
- (d) two sets of estimates were prepared in order to indicate the possible range in the estimated magnitude given the impression in the data sources. There is thus, a high estimate and low estimate. This was done by examining all the available sources of data and other information available in each state;
- (e) having assumed the "Probable percentage", slum population for the three size classes of cities/towns in each State, slum population were worked out on the basis of the "assumed percentages" by using 1981 Census population for each size-class in the selected States/Union Territories in the Country. The States/Union Territories for which data were not available had not been considered. These include Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalya, Mizoram, Arunachal Pradesh and Nagaland. Only two Union Territories have been considered, namely Delhi and Chandigarh.

Table 52- Road length per thousand persons has been worked out by dividing the road length figures published by the Ministry of Surface Transport with the annual estimates of population worked out for various years by the office of the Registrar General of India by taking into account the population of 1981 Census. Similarly the number of registered motor vehicles per thousand has also been worked out in the same manner.

EDUCATION

Table 53- A person who can both read and write with understanding in any language is considered as literate and a person who can merely read but cannot write is taken to be as literate. It is not necessary that a person who is literate should have received any formal education or should have passed minimum educational standard. For calculating the literacy rate (literate per 1000 population) the denominator is the corresponding section of the total population. For all ages (both sexes) it is the total population.

Table 55- Gross enrolment ratio measures what percentage of the total population in the relevant age-group is being covered by the various educational programmes being run in the country, i.e.,

Gross enrolment ratio at stage I =	Enrolment at stage I	X 100
	Population in the age group corresponding to the I stage	X 100

Two stages are: primary (Classes I-V) and middle (Classes VI-VIII).

The corresponding age-group for these stages are 6-11 years and 11-14 years respectively. Therefore, gross enrolment ratio for primary stage (I-V) is

Total Enrolment in Classes I-V

X 100

Total population in the age group 6-11 years

While interpreting these figures it should be noted that there may be many students outside the age-group 6-11 enrolled in classes I-V. Therefore, enrolment ratios in some age groups can be more than 100.

Table 56- This table gives the status of female education at different levels.

Table 58- The pupil-teacher ratio is defined as the average number of students per teacher for a particular type of school, e.g.,

 Pupil-teacher ratio
 Total enrolment in secondary school

 for
 =

 secondary school
 Total number of teachers in secondary school

Table 63- Dropout rate in different stages of school education

Dropout rate:

Dropout rate at primary stage during a given year is defined as the ratio of the difference of enrolment in class I in the fourth year preceding and the enrolment in class V during the year to the enrolment in the class I in the fourth year preceding. In mathematical terms, these rates for primary (I-V), middle (I-VIII) and secondary (I-X) stages are defined as:

Drop out rates at Primary stage (I- V) =	Enrolment in class I preceding four years (i.e. 1987-88) minus Enrolment in class V during the year (1991-92)	
	Enrolment in class I preceding four years (i.e.1987-88)	
Drop out Rates At Middle stage(classes during 1991-92	Enrolment in class I preceding 7 years (i.e. 1984-85) minus Enrolment in class VIII during the year (1991-92) I-VIII)= Enrolment in class I preceding 7 years (i.e. 1984-85)	-* 100
Drop out rates at Secondary stage(c during the year	Enrolment in class I preceding 9 Year (i.e. 1982-83) minus Enrolment in class X during the year (1991-92) lasses I-X) =	* 100
1991-92	9 years (i.e.1982-83)	

LABOUR AND EMPLOYMENT

Table 77- NSSO surveys have adopted three different approaches to measure employment and unemployment. According to usual status approach, a person is considered as working or employed if he/she is engaged relatively for a longer time, during the reference period of last 365 days in any one or more of the work activities. He/she was considered as seeking or available for work or unemployed if he/she was not working but was either seeking or available for work for a relatively longer period of the specified reference period. According to current weekly status, a person is considered to be employed if he/she pursues any one or more of the gainful activity for atleast one hour on any day of the previous week. On the other hand, if a person does not pursue any gainful activity but has been seeking or available for work, the person is considered as unemployed. According to current daily status, a person is considered as employed for the entire day of the reference period of one week if he/she had worked four hours or more during the day. If he had worked for one hour but less than four hours, he is considered for working as half day and seeking/available for work for other half of the day. If a person is not engaged in any work, even for one hour on the day, but was seeking/ available for work for four hours or more, he is considered as unemployed for the entire day. The aggregate of day units, either half or full under different activity categories during the reference week divided by seven provides the estimates of average number of persons days by activity category during an average week over the survey period of one year.

Table 82- The data used in this table are based on the Employment Market Information (EMI) programme of the Directorate General of Employment and Training. The EMI covers on a statutory basis, all establishment in the public sector and all non-agricultural establishments employing 25 persons or more in the private sector. From March 1966, the coverage was increased and establishments employing 10 persons or more in the private sector were added, though on a voluntary basis. The EMI programme does not cover employment in the unorganised sectors like agriculture, self-employed persons and establishments in the private sector employing less than 10 workers.

Table 83- Data given in this Table is based on the census of Government Employees which is conducted every year by the Directorate General of Employment and Training (DGET). The census cover all persons actually holding on the date of census, civilian post in and under the Central Government, whose pay and allowances, honorarium, or any other remuneration etc are paid out of the consolidated fund of India.

1. Regular Staff:

- (i) **Permanent employees** : One who holds a Central or State Governments post substantively on the date of the census.
- (ii) **Temporary employees**: The employees who have not been declared permanent in the post he is holding or in any other substantial post.

2. Non-Regular staff:

This category of employees census includes state government employees on deputation to Central Govt., Honorary employees, besides regular work - charged employees, part time employees of the Central Govt. employees paid out of contingencies and whole time or part time employees in Indian embassies and missions abroad including locally recruited staff subject to discharge on not less than one month's notice and employees of ad hoc committees set up by the Central Government.

The indices in the table have been worked out for all the years by taking 1971=100 as base both for total (Regular & Non-Regular) and Regular Employees of the Central Government.

Table 85- The day to day registration at employment exchanges and notification of vacancies by the employers generate comprehensive information which facilitates the appraisal of the organised labour market. The statistical returns from employment exchanges relating to various characteristics of job seekers fresh or otherwise, and the demand pattern of employment in industry and service sector provide only a broad indication of the unemployment situation in the organised labour market. However, as registration is voluntary and they are located in urban areas, they cannot be deemed to cover all job seekers. Further, there are known deficiencies arising from the fact that not all the registrants would be really without a job. Moreover, the number of job seekers is not necessarily the number of unemployed persons.

Table 87- Under the Factories Act, statistics of injuries resulting from industrial accidents by reason of which persons affected are prevented from attending to work for a period of 48 hours or more immediately following the injury are required to be reported to the factory inspectors. For statistical purposes the number of injuries is given by the number of persons receiving injuries as a result of accidents and this number can be more than the actual number of accidents because one accident may result in injuries to more than one person. The data on injuries relate only to the factories submitting returns, as no estimates of injuries can be made for the defaulting factories.

The frequency rate of injuries is calculated by dividing the total number of injuries by the corresponding man-days worked. Incidence rate gives the injuries per thousand persons employed.

Table 88- An industrial dispute is taken to be a temporary stoppage of work by all employees or a group of employees of an establishment (strike) to express a grievance or to press a demand. Similarly, temporary withholding of work from a group of employees by an employer or a group of employers (lockout) in a unit in connection with matters relating to employment or unemployment or terms and conditions of employment is also taken as an industrial dispute. Only those work stoppages which involve 10 or more workers whether directly and /or indirectly are included in these

138)

statistics. The figures of man-days lost are obtained by adding up the actual resultant vacancies caused directly and/ or indirectly, during work stoppage in each shift of each potential working day (excluding weekly offs and other scheduled holidays when the establishment would have remained closed even if no work stoppage had taken place).

INCOME AND CONSUMPTION

Table 89-Household consumption expenditure comprises of all expenditure incurred by the household, exclusively on domestic account, including consumption out of home-grown produce or transfer receipt like gifts, loan etc. The expenditure on household enterprises is excluded from consumer expenditure. While consumption out of transfer receipts is included, transfer payments of all kinds such as loans, gifts, charities in money or in kind like grain loan etc. are excluded. Expenditure on purchase and construction of residential houses are considered to be expenses on capital account and hence are excluded from the consumer expenditure; but the expenditure towards maintenance of residential building is included in the consumer expenditure of the household.

Table 91- Per capita income for a particular year is obtained by dividing the net national product at factor cost by the estimated mid-year population in that year. Since the national income is calculated for the financial year, the estimated population corresponds to mid-financial year i.e. 1st October. The estimates of per capita income corresponding to the New series had been calculated after comprehensive review of both the data base and the methodology employed in the erstwhile old series. Efforts have been made to make use of as much as possible of the current data available through various all-India surveys. Revised procedures and methodological improvements had been adopted to derive the intermediate items. The coverage of the New series had also been enlarged so as to include the state of Sikkim.

Table 92- Percentage of population below the poverty line is worked out on the basis of household consumption expenditure data released by the NSSO in its 50th Round report titled " Report on the 5th Quinquennial Survey on Consumer expenditure, NSSO, May, 1996".

PRICES

Table 93- A Consumer Price Index (CPI) measures changes over time in the general level of prices of goods and services that a population under reference, acquire, use or pay for consumption. In practice, a CPI measures the cost of purchasing a representative market basket of goods and services. Four CPIs, namely CPI for Industrial Workers [CPI (IW)], CPI for Urban Non- Manual Employess [CPI (UNME)], CPI for Agricultural labours [CPI (AL)] and CPI for Rural Labourers [CPI (RL)], are compiled and released on monthly basis at national level. The CSO releases CPI (UNME), whereas the other three CPIs are brought out by the Labour Bureau. The current series of CPI (IW) relate to the base 1982=100; and is compiled for 70 centres. The base year of both CPI (AL) and CPI(RL) is 1986-87=100. CPI (UNME), having the current base of 1984-85=100, covers 59 selected on urban centres. A Wholesale Price Index (WPI), on base 1981-82-=100, is also relased on a weekly basis with a time lag of two weeks by the office of the Economic Adviser, Ministry of Industry.

PUBLIC ORDER AND SAFETY

Table 100- Percentage of cases pending investigation means cases pending investigation at the end of the year to total cases for investigation. Percentage of cases pending trial relates to cases pending trial at the end of the year to total cases for trial. Conviction percentage refers to cases resulting in conviction to total cases for which trials were completed.

 Table 101- Earlier Juvenile boys and girls were of the same age group (i.e. below 21 years). Since 1988 Juvenile boys and girls are of different age groups (i.e. boys below 16 years and girls below 18 years)

 Table 102- Incidence of suicides per lakh of population has been worked out on the basis of sex-wise estimated annual population supplied by the office of the Registrar General, India based on 1981 and 1991 Censuses.

INTERNATIONAL COMPARISONS

Table 103 & 106 -

Human Development Index

Human Development Index was released for the first time by the UNDP for 30 countries of the world in 1990. The UNDP has defined human development as the process of enlarging people's choices. Income is one of those choices but it does not cover the totality of human life. Health, education, a good physical environment and freedom of action and expression are just as important. The Human Development Index (HDI), therefore, combines indicators of national income, life expectancy and educational attainment to give a composite measure of human progress. To derive the measure mathematically, first, a measure of deprivation (I_{ij}) of each indicator (X_i) relating to j-th country is defined as follows:-

$$I_{ij} = \frac{(\max X_{ij} - X_{ij})}{(\max X_{ij} - \min X_{ij})}$$

Then, an average deprivation indicator is estimated by simply taking the average of three deprivation indicators defined above, i.e.

$$I_{j} = (\sum_{i=1}^{3} I_{ij})/3$$

and finally, HDI is defined as one minus the average deprivation index,

 $(HDI)j = (1-I_i)$

Gender Empowerment Measure (GEM)

The Gender related Development Index (GDI) measures achievements in the same dimensions and variables as the HDI, but captures inequalities in achievement between women and men. It is simply the HDI adjusted downward for gender inequality. The greater the gender disparity in basic human development, the lower a country's GDI compared with its HDI. The Gender Empowerment Measure (GEM) reveals whether women can take active part in economic and political life. It focuses on participation, measuring gender inequality in key areas of economic and political participation and decision making. It tracks the percentages of women in Parliament, among administrators and managers and among professional and technical workers- and women's earned income as a percentage.

and women's earned income as a peropportunities in selected areas.
