# Central Provinces Administration

EDUCATION DEPARTMENT

Nagpur, the 12th December 1914.

READ-

Letter No. 6517, dated the 5th October 1914, from the Director of Public Instruction, Central Provinces, forwarding the Report on the state and progress of Education in the Central Provinces and Berar for the year 1913-14.

READ ALSO-

The Circle and District Reports.

#### RESOLUTION.

The activities of the Education Department: during the year 1913-14 were specially devoted to the development of projects: in all branches of instruction which owe their initiation to the grants made by the Government of India for the improvement of education. In the Administration's Resolution No. 840—II-6-60, dated the 10th August 1914, an account was given of the purposes to which these various grants have been, or are proposed to be, allotted, and the advance achieved in the programme which is being financed from this source was set forth. In the present review it is unnecessary to recur to this subject, but the succinct and interesting report which Mir. Mayhew has written further exhibits the progress that is being made in the preparation and elaboration of important schemes which will mature in the curreent and succeeding years.

- 2. The demand for boys' education in all stages continues to be keen in most parts of the Provinces, and more particularly in Berar, and the consequent press on space in school buildings and the even-incleasing demand for trained teachers, especially in the primary and middle departments, present problems which require constant attention. Large sums from the Government of India grants have been allotted for educational buildings, and the Chief Commissioner desires to take this opportunity to emphasisse the importance of exercising foresight in the selection of sites and the adoption of designs for new schools of the higher grades, so as to allow for further extension both for class rooms and hostels. In the course of his tours, Sir Benjamin Robertson has seen some schools in which, though they were practically new, the accommodation was barely sufficient for immediate requirements, while they were so placed and designed that any extension must involve the erection of separate buildings. In the interests of economy it should be borne in mird that the construction of new premises must almost always involve a comsiderably greater cost than an addition to existing buildings.
- 3. There has been a substantial increase in the number of primary schools and of pupils under instruction. The number of new schools opened during the year is in accordance with the anticipated rate of development, but the remarks of the Director of Public Instruction justify the inference that there has not been a commensurate improvement in the quality of the instruction. The shortage in the supply of competent candidates for the post of teacher is still a serious obstacle to rapid expansion, but the Chief Commissioner trusts that the measures that have recently been taken to meet the deficiency will be attended with good results. At the close of the year the prospects of certificated teachers in District Council schools were substantially improved by the introduction of a pension

scheme and by the raising of the minimum pay to Rs. 11. At the same time arrangements are being made for the better training of teachers; it is intended to open additional Normal Schools, and the scheme of instruction in these institutions is being revised, while the classes started for the retraining of teachers should keep the personnel efficient and interested in their work. The subordinate inspecting agency has also been increased to keep pace with the expansion in the number of schools.

- The demand for Secondary education, which has been the subject of remark on previous occasioms, continued to be in excess of the available accommodation. The financial limitations to Government enterprise are, however, beginning to be realised, and it may be hoped that with the growth of enlightened public opinion, funds will be forthcoming from private sources which will facilitate the establishment of institutions which, with the aid of contributions from Government, will be really efficient and will be able to supplement the educational organization of the Province so as to meet the growing needs The scheme for the improvement of the pay and prospects in this direction. of the members of the Subordinate Educational Service, which was brought into force at the beginning of the current year, offers substantial benefits which should attract eligible candidates for masterships in greater numbers than hitherto. The importance of physical training in Secondary Schools is now widely recognised, and the provision of play-grounds is regarded as a necessary part of the equipment of a school. The Chief Commissioner is gratified to observe from the report that progress in this respect has been well maintained and that, thanks to the zeal of the Inspectors which has infected pupils and staff, the important qualities of csprit de corps and self-control are being fostered in these schools by the encouragement of organised games and athletics.
- The need for greater provision for Collegiate education has been felt for some time, and in this connection the announcement that it was proposed to establish an autonomous University for these Provinces has given wide-spread satisfaction and has evoked extensive interest and discussion. A representative committee is now engaged upon the preparation of a scheme for the University, and the results of its deliberations are awaited. The scholastic performances of the Arts Colleges during the year were satisfactory, and it is encouraging to learn that the advantages of a corporate academic life in college hostels are coming to be more fully appreciated. The desirability of including in the educational courses of the Provinces opportunities for technical instruction on practical lines has been met by the establishment of an Engineering School at Nagpur which is now commencing work. The institution of scholarships to enable the sons of cultivators to prosecute their studies at a High School and subsequently in the Agricultural College is another measure of reform which should encourage the study of scientific agriculture. Progress has been made with the equipment of High Schools with well-found laboratories, thereby furnishing an opportunity for the study of Natural Science and providing students with the means of adding a practical training to their purely literary studies.
- 6. Although the number of Girls schools remains the same there has been an increase in the number of pupils. A noteworthy feature in the development of female education in these Provinces is the progress of the Amraoti Girls High School. The establishment of this institution is creditable to the enlightened opinion of Berar and its development will be watched with interest. The progress of female education must depend at present on there being a sufficient supply of trained teachers, capable of winning the confidence of the people among whom they work, and the development of Normal Schools for Women is being examined in relation to this question. The inspecting agency of the Girls schools has been strengthened considerably during the year by the addition of an Inspectress and two Assistant Inspectresses, and the charge of the Girls schools of the Province has been divided into two Inspectresses' charges with an Inspectress and two Assistant Inspectresses in each.
- 7. The departure of Mr Wright on sick leave during the year, at a period when the numerous schemes for educational development were being matured under his able guidance, entailled a serious loss on the Department, and Sir

Benjamin Robertson desires to place on record his appreciation of the competent manner in which Mr. Kilroe, Assistant Director, carried on the arduous duties that temporarily devolved upon him, and he also wishes to congratulate Mr. Mayhew upon the success he has achieved since assuming charge of the Directorship towards the close of the year.

ORDER—Ordered that a copy of this Resolution be submitted to the Government of India, Department of Education; also that a copy be forwarded to the Director of Public Instruction, Central Provinces, for information and guidance, and that it be published in the Central Provinces Gazette.

FROM

THE HON'BLE MR. A. I. MAY'HEW, B. A.,

OFFG. DIRECTOR OF PUBLIC INSTRUCTION.

Central Frovinces,

To

THE SECRETARY TO THE HO!N'BLE THE CHIEF COMMIS-SIONER.

EDUCATION DEPARTMENT,

Central Provinces.

Nagpur, the 5th October 1914.

SIR,

I have the honour to submit the Annual Report on the state and progress of Education in the Central Provinces and Ber ar for the year 1913-14.

Mr. Wright, Director of Public Instruction, vas compelled by the state Administration. of his health to take leave in the middle of November 1913. For three months Mr. Kilroe, Assistant Director of Public Instruction, officiated as head of the Department. I assumed control on February 20, 1914 on which date Mr. Kilroe reverted to his permanent post. The Department suffered a great loss through being deprived so suddenly of Mr. Wright's administrative skill and experience at a time when many important schemes were being considered and initiated.

Mr. Kilroe had no Assistant Director during the three months of his administration. I am in a position to appreciate the mamner in which he performed singlehanded his arduous duties and the special help that he has been able to give me at the outset of my work. But delay in the development of some of the larger schemes has been inevitable. The ordinary work of the Department has proceeded smoothly and without disturbance.

- 3. During the year the Department lost the services of Miss Lima, Assistant Inspectress of Schools, who died after eight years of valuable work.
  - 4. The following additional posts were sanctioned during the year:

Indian Educational Service.

Inspector of European Schools and Science. Two Head Masters of High Schools, A second Inspectress of Schools.

The appointment of the first-named officer, which has been rendered possible by the allotment of a portion of the 1913-14 Government of India grants, will relieve the Assistant Director of Public Instruction, who has hitherto been responsible also for the inspection of European Schools, and will have a marked effect on practical laboratory work in Secondary Schools.

Provincial Educational Service.

Two additional Assistant Inspectresses of Schools.

All the Assistant Inspectresses and the two Lady Superintendents of Female Normal Schools for women have been placed ogether in one cadre.

The new posts of Inspectress and Assistant Inspectresses were filled during the year. Miss Chamier, the new Inspectess of Schools, has had experience of administrative work as Assistant Inspectress of Schools under

the Bengal Government. Mr. Cheshire joined the Department in an Indian Educational Service post created in the previous year and was deputed to the Morris College.

6. The services of Mr. Jones were placed at the disposal of the North-West Frontier Province, where he officiated as Director of Public Instruction for  $6\frac{1}{2}$  months at the beginning of the year. At the close of the year he was placed on special duty in my office. During these periods Mr. Tostevin acted as Principal of the Morris College. Mr. Sells was deputed for brief periods to take part in conferences relating to the proposed Chiefs' College at Delhi.

#### General Remarks.

- 7. The year's figures show an increase of 333 schools and 28,314 scholars. The increase was most marked in boys' primary education, where it was rendered possible by the application of Government of India grants. The percentage of total number of male and female scholars to total population of school-going age rose from 14.85 to 16.21. The percentage ranges from 24 in Amraoti to 8 in Betul District. Throughout Berar the demand for boys' education in all stages is most marked, but I have been much impressed by the intense zeal for all branches of education displayed by various classes of the community throughout the Province. The present rate of increase could be increased greatly if sufficient funds and teachers were available. It is often forgotten that even where funds are available the supply of satisfactory teachers is not always immediately possible.
- 8. The practical interest taken both by officials and non-officials is also most marked and fruitful. The services rendered by District Officers deserve special mention. There are many Deputy Commissioners who by example and precept are stimulating not only teachers and pupils but also all their subordinate officers and influential private residents to help forward the cause of education. The relations of officers of this Department to District Officers are friendly and conducive to good results.
- 9. The total expenditure on education rose from Rs. 36,58,881 to Rs. 39,80,802. The total expenditure from Government of India grants was Rs. 4,61,369. During the year additional recurring grants amounting to Rs. 2,69,000 were received from the Government of India and arrangements made for their allotment under various heads. It was not possible to spend during the year the whole of the amount available for the year, but the balance is being devoted to non-recurring expenditure. Full details regarding the expenditure of these and previous grants have been given in a recently published Resolution of the Local Administration, and references to the allotments of the 1913-14 grants will be found under various heads of this report.

University.

In the Government of India in 1913 drew attention to the necessity of limiting the area of jurisdiction of existing Universities by securing a separate University for each of the larger provinces, and announced their intention of establishing Universities in those provinces in which a demand has arisen for such institutions. In response to a widespread and earnest desire for autonomy in University matters in this Province, the Chief Commissioner, after ascertaining the trend of public opinion as to the form which the new University should take, has appointed a representative Committee to frame a scheme for the establishment of a University for the Central Provinces and Berar. It has been decided that the University shall be of a teaching type situated at Nagpur, with affiliated Colleges in other parts of the Province. The Committee, of which I am President, was finally constituted after the close of the year under review and is now engaged in its labours. Towards the close of the year under report, Mr. Jones was placed on special duty in my office for preliminary work in connection with the University, and he is now Secretary of the Committee.

Collegiate Education.

There was a further increase of 178 in the number of students undergoing Collegiate education. On all sides the inadequacy of the existing provision for University teaching in this Province has been admitted. It has been decided to establish a Government College at Amraoti, towards the building and equipment of which a sum of two lakhs is being provided from the King Edward Memorial Fund; but of this sum half a lakh is being specially

contributed by the Marwari community in Berar. A site has been selected and building plans are under consideration, but detailed proposals for the College have necessarily been delayed until the general outlines of the University in which it will eventually be incorporated have been determined. It is improbable that even the addition of this College will meet fully the growing needs of the whole Province. The matter is engaging the attention of the University Committee.

- 12. Good progress was made during the latter part of the year in the construction of new buildings for the Jubbulpore Arts College in a beautiful and healthy site,  $3\frac{1}{2}$  miles outside the town. Over two lakes, including Rs. 30,000 from Government of India grants, had been spent by the close of the year, and the ultimate cost, inclusive of residential quarters for the staff and hostel accommodation for 200 students, will be approximately seven lakes. The work will be completed before the close of 1915.
- 13. The Morris College is to be taken under the direct control of Government, and the Memorial funds at present devoted to its upkeep will be expended on various educational objects, including the award of scholarships for University education. Necessary steps towards the accomplishment of this project were taken during the year and will, it is hoped, be completed shortly.
- 14. The staffs of various Colleges were strengthened during the year—the Morris College by the addition of an Indian Education Service Professor, the Hislop College by the addition of a Europeam Professor of high academic standing, and the College of Science by the appointment of an additional Professor of Chemistry and Demonstrator. The strength of the College of Science increased from 43 to 72. Further progress was made in Laboratory equipment, but the construction of a building has been postponed pending the settlement of the University question. As in previous years, a special class was held for the training of Science teachers.
- 15. In the University examinations there was marked improvement in the B. Sc. results and no distinct falling off in any Arts or Science results, which were well up to the general level of the Allahabad University. In the B. A. and Intermediate examinations the percentage of passes exceeded the University percentage.
- and many-sided academic life in all the Colleges. Hostel residence becomes increasingly popular, and the existing hostel accommodation is in some cases insufficient. It is hoped that the Muhammadams will take full advantage of the special hostel provided during the year for their community in the Morris College. The Principal of the Jubbulpore College has opened an employment bureau, which is intended to bring ex-students im search of employment into close touch with employers.
- 17. The number of pupils in the High section of Secondary Schools increased by 42, and one new High School was established under Municipal management ton—Boys. at Burhanpur. In the Middle stage of Secondary education there was an increase of 401 pupils and 8 new Middle Schools were established, of which one was a Government School—Anglo-Urdu—and 6 were the result of Municipal
- 18. The demand for Secondary education continues to exceed the supply, and there would have been a much larger increase of pupils if it had not been necessary in some schools to restrict admission. Steps have already been taken during the current year, in view of the present demand, to open the fifth standard of the promised Government High Schools at Damoh, Betul and Khamgaon, and to add additional sections to certain other schools within the limits wisely imposed by the Local Administration in 1911. The provincialization of some of the District Anglo-Vernacular Schools is also being considered during the current year.

enterprise.

19. Hitherto one of the obstacles to rapid expansion of Secondary education has been the shortage in the number of graduate candidates for teacher's posts. Under the scheme elaborated during the year under review and

sanctioned at the beginning of the current year, the minimum salary of graduate teachers has been raised to Rs. 60, regular promotion on a time scale secured, and a generous supply of special posts on higher pay for selected men provided. The minimum pay of undergraduate teachers has been raised to Rs. 40 and corresponding improvement has been made in higher grades. It is anticipated that the result of this step will be a large increase in the number of eligible candidates. This reorganisation has been rendered possible by a substantial allotmeent from the 1913-14 Government of India recurring grant.

- 20. During the next few yearrs there will be a considerable expansion of aided Secondary education. People are gradually coming to understand the financial limitations of Governmentt enterprise. At the same time the necessity for supplementing grants and fees I by private funds and for securing a contented and efficient staff on adequate salaaries is being emphasised. In Berar the desire for English education has in many places led the residents to support English classes attached to the District Board Primary Schools. These classes have now been separated from Primaary Schools and will become Aided Anglo-Vernacular Schools if necessary founds are forthcoming. In regard to Secondary education, Municipalities now enjoyy all the benefits of the Grant-in-Aid Code. Their zeal for Secondary education is conspicuous, but care has to be taken to see that their new Secondary Schools are efficient and not detrimental to the Aided Secondary Schools, adequately financed interests of Vernacular education. and carefully inspected, will be a most valuable asset to the Province, but under other conditions they will become aa source of evil. The need for increasing the Inspectorate, with particular refereence to the development of aided schools, is receiving due consideration.
- 21. As stated in the last report a portion of the Government grant for Aided Anglo-Vernacular Schools has been set apart for the institution of a Provident Fund for teachers in these schools. During the year a scheme was drafted which met with the general approprial of School Managers. It is hoped that the fund, the inception of which demands most careful and detailed consideration, will be started before the closse of this year.
- 22. During the year, 5 buildings, 2 laboratories and 1 hostel for Government Secondary Schools were completed; 13 buildings and 1 laboratory were begun, and further progress made: with 17 buildings, 1 laboratory and 3 hostels. From the 1913-14 Government of India grant a sum of Rs. 42,000 was allotted for the equipment of Govvernment High Schools. From the special Government of India grant for Aideed Anglo-Vernacular Schools over Rs. 13,000 was devoted to increasing the number of trained teachers, and grants were also made for equipment of these sschools.
- 23. There was a large increase in the number of pupils who appeared for the Matriculation Examination of the Allahabad University 1914, and the percentage of passes rose from 39 to 42, which was also the University percentage.
- 24. Important changes were: made during the year in the regulations for the award of Middle and High Schools Scholarships. Hitherto Middle School Scholarships have been awarded on the results of the old Primary examination, which was conducted as an annual examination in each Primary School by Deputy Inspectors. A public competitive examination called the Middle School Scholarship examination has now been instituted on the same lines as the High School Scholarship examination. Both examinations are now held solely for the award of scholarships. No cerrtificates are issued and promotion from class to class is not determined by the results. But the winners of scholarships have prior claims to admission to Government Schools. No fees are charged for either examination. The age limnit for the High School Scholarship has been reduced from 17 to 16.

Vernacular Middle Schools-Boys.

25. There was a slight increase of 386 pupils in the Vernacular Middle stage. The policy of improving specially selected schools with the help of Government grants was continued. The future of these schools has not yet been determined and is now beingg considered in connection with the reorganisation of Normal Schools, for which they must supply students and from which

they must receive competent teachers. In order to make these schools more attractive, experimental hostels have been opened in some cases to which boys from Primary Schools and other villages have been drafted. Though some success has been attained, there are many obstacles to a wide extension of such hostels. At present there is but little demand in the villages for the prolongation of Vernacular education beyond the primary stage, except as a prelude to the teaching profession. But some Municipalities are maintaining strong Vernacular Schools side by side with Anglo-Vernacular Schools. This is encouraging, and it is probable that an extension of this policy would relieve the pressure of Anglo-Vernacular Schools and afford scope to ambitious pupils who lack either funds or ability for Secondary education.

- 26. There was an increase of 26,495 pupils under instruction. During the Primary year a sum of over Rs. 58,000 was allotted from the 1913-14 Government of India grant for the opening of new Primary Schools and 259 schools were actually opened from this allotment. In regardle to improvement of attendance, the influence of Deputy Commissioners and their subordinate officers is of paramount importance. In some districts where the Deputy Commissioner has shown a special interest, there has been a noticeable ircrease in attendance, but in all districts the Revenue Officers have been hielpful.
- 27. Advance in Primary education should be estimated particularly with reference to the increase of pupils in higher classes of Primary Schools. It is satisfactory to note an increase of 3,422 purpils in the Upper Primary stage of instruction. But the increase in the number of students passing the Upper Primary examination is lamentably small, which indicates an absence of improvement in the quality of instruction. Frequent references are made in the annual reports of Deputy Commissioners and District Councils to the inferiority of Primary School instruction. The opinion is often expressed that further expansion should be delayed unttil better training and higher salaries have produced a more efficient staff of teachers. With training I deal below. In regard to pay and prospects of teachers, the pension scheme referred to in paragraph 15 of last year's report has been brought into force from the beginning of current year, the expenditure being met from the Government of India grants. It provides not only pension for all teachers on Rs. 11 and upwards in District Council Schools in the Centural Previnces, but also for the raising of the pay of certificated teachers to the pensionable level. The elimination of all posts with salaries of less than Rs. 8 will probably be the next step. It is realised that these are only preliminary measures in a vitally important programme.
- 28. The expansion of Primary education necessitates additions to the Subordinate Inspecting Agency. During the year five additional Deputy Inspectors were appointed, the cost being met by an allotment from the 1913-14 Government of India grant. The urgent demands made for extra help for Muhammadan Schools in Berar and for three districts off the Central Provinces are under consideration. Deputy Inspectors have been grouped with graduate teachers of Secondary Schools in the scheme alluded to in paragraph 19. The work of Deputy Inspectors has received in almost every case the warm approval of Deputy Commissioners and District Councils.
- 29. No money was allotted during the year from the Government of India grants for the construction of school buildings. But preliminary steps were taken for the allotment of a sum of 5 lakhs for this purpose at the beginning of the current year. Buildings were constructed for 107 schools, but there are still heavy arrears in the building programme. In this matter the needs of Municipalities seem to be even more urgent than those of Dstrict Councils. In large towns the construction of suitable buildings in lhealthy localities is often difficult and expensive, while on the other hand the hygienic evils of overcrowding are more marked. In the campaign against tubercrulosis the provision of ample and well-ventilated buildings plays an important part.
- 30. The Training College at Jubbulpore continues to do excellent work. Training of teach-The examination results of the College and Mode High Schools are most ers. satisfactory, and teachers who have passed through the institution show unmistak-

ably the beneficial results of their training. Mr. Spence's enthusiasm is evidently contagious. The much-needed expansion of the College work will be considered in connection with the University scheme.

- The vexed question of the future of the Normal Schools could not be settled during the year under reeview. A scheme on the lines suggested by Mr. Wright is now being elaborated, and preliminary steps have already been taken in the building programme that the scheme will necessitate. The Re-Training Class at Jubbulpore referred to in the last report has been opened in July this year and, in addition to preparations for this class, further progress was made last year by the provision of similar accommodation for similar classes at Amraoti and Nagpur. The Practtising Schools at Nagpur and Khandwa have been raised to the Vernacular Miiddle grade, and certain improvements in the Normal Schools staff have been effected by al'otments from the Government of India grant. The enrolment of more students in the condemned Training Classes has been stopped with effect from the beginning of this year.
- 32. It is interesting to note that various missions engaged in educational work are seriously considering the establishment of central training institutions for their Primary School teacherss.

Technical

- The buildings of the Engineering School referred to in the last report Special Education. have been completed and include workshops, hostel, and Superintendent's quarters. The theoretical portion off the course is taken in the College of Science lecture rooms. The School could not be opened till July 1st in the current year. Preparations are on foot for attaching to it a class for motor chauffeurs and mechanics. A thoroughly competent Superintendent of Workshops has been secured. His experience in an important British motor-car factory will be most valuable for the motor class.
  - 34. From the 1913-14 Government of India grant a sum of Rs. 4,000 was transferred to the Agricultural Diepartment for the award of scholarships to sons of cultivators for study in High Schools and subsequently in the Agricultural College. The scheme is likely tto be most fruitful in results.
  - Satisfactory progresss continues in the Reformatory School at 35. Jubbulpore.
  - 36. The few Aided Industrial Schools require more efficient inspection and advice than can be given by this: Department.

Female Education.

- There was no increase in the total number of institutions for Indian girls. But the number of pupils in these institutions increased from 17,653 to 18,524. In the strength of Anglo-Vernaccular Schools there was no appreciable advance. Two candidates appeared for the Matriculation Examination and one passed. For the Girls' High School, Amiraoti, the establishment of which was recorded in last year's report, the temporary services of an Assistant Inspectress, Miss Green, were obtained from the Government of the United Provinces. established excellent relations with the School Committee, and by the end of the year the strength had risen to 26. Most of the pupils, however, were in the elementary stage of instruction. The hostel opened during the year will soon be full. There are many signs of growing interest in higher female education in Berar, and it will mot be difficult to obtain pupils for the higher classes when we have secured for them competent teachers. The School Committee, which includes influential Indian ladies, is working hard on behalf of the institution, and with their help many difficult problems connected with the School will gradually be solved. A sum of Rs. 3,000 was allotted from the 1913-14 Government of India grant for tthe improvement of the School.
- 38. In the Vernacular Miiddle stage there was a slight increase in strength but no marked development. The Inspectresses believe that improvement in the staff of Vernacular Middle Schools will increase their popularity. In the Primary stage the strength has increased by 856. Four experimental aided schools were provincialised.

- 39. The increase in the female Inspecting Agency referred to in paragraph 4 will improve the quality of work in all schools. Of the two Inspectresses, one is now in charge of the Nagpur and Berear Divisions and of Chhindwara and Seoni Districts, while the other has the remaining districts of the Jubbulpore and Nerbudda Divisions and the whole of the Chhattisgarh Division. Each Inspectress has two Assistant Inspectresses at her disposal. But neither in quantity nor in quality can there be much improvement until the supply of competent teachers, winning full local conffidence, has been more adequately secured. The utilisation for this purpose of theunallotted portion of 1913-14 India grant set apart for female education is tunder consideration, but the question is not merely one of funds. The development of Normal Schools for women is being considered in relation to the supply of teachers. The Schools at Jubbulpore and Amraoti are doing as well as can be expected in the existing circumstances. The shortage of suitable candidates for training is felt more keenly in the Marathi Districts than in the Hindi area.
- 40. The number of girls reading in lboys' schools rose from 13,684 to 15,690 under the fostering influence of rewards to teachers in boys' schools who show enterprise in the enrolment of girls. This system is excellent in so far as it prepares the way for the establishment first of an aided school and later on of a Government Girls' School. Stricter regulations regarding the age of girls admitted to boys' schools will probably be rrequired. The difficulty of getting aided schools started even where there are many girls reading in the local boys' schools is partly financial and partly due to at lack of confidence in the teachers of girls' schools.
- 41. The good work that is being donce in many Mission Girls' Schools deserves record. In many cases careful supervision and careful education of teachers have produced creditable results,
- 42. One Primary School was closed during the year owing to poor attend-European Education. ance. There was an increase of about 100 in the average strength of Primary Schools and a slight falling-off in High and Middle Schools.
- 43. The decrease in expenditure from IProvincal Funds is due to the fact that a smaller amount was paid during the year as special grants for buildings and equipment. The increase in fee receiptss is mainly under boarding charges. From the 1913-14 recurring grant from the Government of India a sum of Rs. 18,000 was set aside for European Schools, the total recurring grants from this source now amounting to Rs. 31,000. Propesals are under consideration for the use of an unallotted balance of about Rs. 10,000 from this amount. Part of the cost of the newly created posst of Inspector of European Schools and Science has been debited to the 1913-14 grant. Further grants for buildings have been sanctioned from the  $1\frac{1}{2}$  lakhs non-recurring grant referred to in the last report, and proposals for the expenditure of at balance of about Rs. 74,000 are under consideration.
- 44. A Provident Fund for teachers has been opened in the Christ Church School, Jubbulpore.
- 45. Of the many important problems reclating to European Education which will engage the attention of the new Inspector of European Schools and Science perhaps the most urgent is that relating to the provision of education for children who are at present deprived of its benefits cowing to poverty or residence in a schoolless area or owing to both these reasons. I hope to arrange for a census of such children and to be able to find funds inecessary for solution of the problem. During 1913-14 provincial grants and scholarships on behalf of orphans and poor children amounted to Rs. 18,587, from which 182 children, 11 per cent of the total number enrolled, were helped. This year 223 applications have already been received, some of which have been rejected for want of funds. The financial position of some schools is unsatisfactory, and the question of raising the rates of fees in such schools requires thorough investigation.
- 46. There has been an increase of nearly 2000 in the total number of Muhammadan Muhammadan pupils in all classes of schools. Under Collegiate education there has been a slight increase, but the absence of any marked advance in Secondary

education is disappointing. In female education numerical progress has been made. From the 1913-14 Government of India recurring grants a sum of Rs. 10,000 was set apart for Muhammadan Schools, most of which was devoted to the construction of the Muhammadan High School Hostel at Amraoti.

Aborigines and backward classes.

- 47. The statistics show an increase during the year of 9,000 pupils. The difficulty of classification destroys confidence in these statistics, but there can be no doubt that the demand for education among these classes is growing, particularly among the Gonds in Mandla District.
- 48. Proposals were made during the year by the Commissioner of Chhattisgarh Division for improving the educational position of the important Chamar communities in his Division, and experimental measures will accordingly be taken this year. In Berar there has been some advance in low-caste education.

Feudatory States.

49. There has been satisfactory increase in the number of schools and scholars, and Mr. Mitchell's report indicates laudable activity and enthusiasm on the part of the Feudatory Chiefs under the present system, which "throws the responsibility for education on the individual ruler and tends to identify them with and stimulate their zeal and interest in the educational progress of their States." The year's work of the Rajkumar College was satisfactory, and I was much impressed on my visit by the enthusiasm of Mr. Stow, his staff and pupils. A sum of Rs. 50,000 from a Government of India grant was allotted to the additional College buildings which are now under construction.

Physical and moral training.

- 50 A scheme for more thorough medical inspection of schools is under consideration.
- 51. Progress in games continues to be most satisfactory, and particular attention is being paid to physical education by all Inspectors, whose enthusiasm has now infected the pupils and to some extent the staffs of Secondary Schools. Thanks to a generous allotment by the Government of India of 1½ lakhs for hygiene development, it will be possible to make ample provision for playing grounds for all Secondary Schools. Preparations for the expenditure of this sum were made during 1913-14 and a first instalment of grants sanctioned early in the current year.
- 52. Some Inspectors, ably backed by District Officers, have been encouraging with marked results the playing of foot-ball by Vernacular School boys, thus beginning a movement which may have a far-reaching effect on village life.
- 53. Here and there useful experiments are being tried under careful supervision in the direction of definite moral instruction and the formation of societies intended to direct the activities and enthusiasm of school boys into profitable channels. It is clearly understood that moral training is not merely or mainly a question of instruction and that virtue only grows out of virtuous acts.

Text-Book Com-

54. 225 books were sanctioned for use during the year. 117 books were referred to a preliminary reader and 18 to the Text Book Committee, while 337 were disposed of by the Director of Public Instruction.

Students' Advisory Committee.

55. The Committee continued to do useful work. 95 cases were dealt with in addition to general work. Mr. F. M. Cheshire, who before joining this Department was Assistant to the Educational Adviser of Indian Students in London, was appropriately appointed to the Committee. With the permission of the Local Administration he has been asked to advise Secretaries of other Provincial Committees in India.

I have the honour to be,

Sir.

·Your most obedient Servant,

A. I. MAYHEW.

Director of Public Instruction, Central Provinces.

#### EDUCATION—GENERAL TABLE I.

## Abstract Return of Colleges, Schools and Scholars in the Central Provinces and Berar at the end of the official year 1913-14. (FOR DETAILS SEE GENERAL TABLE III.)

Note—For the purposes of columns 1, 2 and 3 the statistics of the Census of 1911 should be utilized, subject to the modifications enumerated below.

\* A town contains 5,000 inhabitants or upwards. A village contains less than 5,000 inhabitants. A Municipality or a Cantonment, whatever its population, should be entered as a town.

† The population of school going age is taken at 15 per cent. of the whole population.

† The population of Native or Feudatory States and Political Agencies should not be shown except in the case of those Provinces where the schools of the States in question come under the supervision and control of the Education Department; and the foot-note should specify what addition or deduction is made in this respect.

<sup>The percentages required for 2 (a), 2 (b), 2 (c) are to be calculated from the figures given in columns 34, 35, 36, respectively, of General Table IV.
The annual cost is calculated on the direct expenditure only. The average cost of educating each pupil is obtained by dividing the direct expenditure by the average monthly number on the rolls during the year.
The average cost of each pupil in District Fund and Municipal Schools is to be obtained from the figures given in General Table VII.
Fraction of a rupee should be omitted, except in the columns showing the average annual cost of educating each pupil.</sup>
