Selected Socio- Economic Statistics India

DEPARTMENT OF STATISTICS
MINISTRY OF PLANNING AND
PROGRAMME IMPLEMENTATION
GOVERNMENT OF INDIA
NEW DELHI

PREFACE.

On attaining independence, a comprehensive and continuous programme of developmental planning had been undertaken by India in various fields of Socio-Economic concerns through various Five Year Plans. A need, therefore, arose to evolve suitable indicators for the monitoring and impact evaluation of these socio-economic programmes. To meet this felt need Central Statistical Organisation (CSO) brought out a brochure entitled "Selectted Socio-Economic Indicators for India" in December, 1987 covering items on various fields of social concerns. Since this publication was found to be quite useful by different types of users; CSO started bringing it out as a regular publication. However, in 1993 it was renamed as "Selected Socio-Economic Statistics, India". Till now five issues have been published including 1993 issue.

The CSO is thankful for all data supplying agencies who supplied the requisite data in time which enabled us to compile this publication and bring out in the present form. I hope that their cooperation in bringing out this publication would continue in future also.

The publication has been prepared in the Human Development Statistics Unit of the CSO under the overall guidance of Shri P.R. Dongre, Director who was ably assisted by Shri Harissh Chandra, Joint Director. Shri Dina Nath, Assistant Director was actively involved in the preparation of the manuscript. I would also like to place on records the active cooperation of the supporting staff of the unit in collection and compilation of the data and making data entry for the publication. A special mention may be made of Shri Deep Chand Sharrma, Senior Investigator, Shri Ajay Rawat, Computer (Senior Scale) and Shri Rajesh Kumiar Pawar, Computer for undertaking this work.

I hope, this publication would be useful in meeting the requirement of planners, policy makers and research workers in understanding the changes occurring in the different fields of socio-economic areas. However, we would be grateful for the suggestions, for imprroving the coverage and quality of the sublection.

NIEPA DC

(S. S. Srivastava)
Director General
Central Statistical Organisation

- Source : Office of the Registrar General, India The reference date in 1971 census was 1 April 1971. In working out the decadal variations for 1961-71 and and 1971-81 the change in referance date in 1971 census has been taken into account.
  - ** In 1981 Census the reference date was 1 March 1981 in all states except Jammu and Kashmir where it was 6 May 1981. No Census was conducted in Assam in 1981. However the projected population of Assam has been taken into account in calculating the growth rates.
    - **@** The 1991 census in J & K could not be conducted. How ever, the projected population has been taken into account for the state in calculating the growth rate of All India.

* Manufacturing and repairs

- # The estimates of the number of workers in 1961 for these industry groups relate to adjusted figures based on 1971 Census concepts.
- @ Gives total except Agriculture. Detailed break-up presently not available

P Provisional

- \$ Includes cultivators and agriculture labourers.
- Note: 1) Figures for 1981 exclude Assam state where 1981 Census could not be conducted due to disturbed conditions prevailing there at that time.
  - Figures for 1981 are based on five percent sample data.
  - 3) Reference period of all the census is 1st March except for 1971 for which it is 1st April.
  - includes cultivators and agricultural labourers onl
  - b includes livestock, forestry, fishing, hunting, plantations and orchards and allied activities

c Including repair service

- d Includes banking, insurance and business services
- e Includes electricity, gas and water supply, public administration and defence

Source : Planning Commission Estimates

- Planning Commission Retimates
  The above estimates are derived by using the poverty line of
  Rs. 49.09 per capita per month at 1973-74 prices corresponding
  to daily calorie requirement of 2400 per person in rural areas and
  the poverty line of Rs. 56.64 per capita per month corresponding
  to calorie requirement of 2100 per person in urban areas.
  The number of people below poverty line relates to the
  population as on 1st March, 1988
  For up-dating the poverty line for 1987-88, CSO private consum-Note 1.

  - -ption deflator has been used.
  - The difference between the aggregate all India Private Consum--ption expenditure estimated by CSO in their National Accounts Statistics and that derived from the NSSO data has been adjusted prorata among the different states and Union Territories.

# Incidence of Suicides

#### EXPLANATORY NOTES

#### 1.POPULATION

The three types of growth rates have been calculated as follows:-

Annual arithmetic growth rate

Annual geometric growth rate

$$(r_0)$$
 = antilog  $\begin{bmatrix} 1 \\ -- \\ 10 \end{bmatrix}$   $(log P_{t+10} - log P_{t}) \begin{bmatrix} -1 \\ -1 \end{bmatrix}$ 

Annual exponential growth rate

$$(r_e) = \begin{bmatrix} \log P_{t+10} - \log P_{t} \end{bmatrix}$$

where Pt = Initial population

Pt+10 = Population after 10 years

- Table 4.- An urban area is defined as follows:
  - (a) All statutory towns i.e. all places within a municipality, corporation, municipal board, cantonment board or notified town area committee etc.
  - (b) All other places which satisfy the following criteria:
  - (i) a minimum population of 5,000
  - (ii) at least 75% of male working population engaged in nonagricultural pursuits; and
  - (iii) a density of population of atleast 400 persons per kilometre square (1000 per sq. mile)

The urban criterion of 1981 varies slightly from that of 1961 and 1971 censuses. In that the males working in activities such as fishing, logging etc.

were treated as engaged in nonagricultural activities whereas in 1981 they were treated as on par with cultivators and agricultural labourers. The definition adopted in 1991 census was similar to that of 1981 census.

- Table 8.- The satatutory lists of Scheduled Castes and Scheduled Tribes are notified in pursuance of Articles 341 and 342 of the constitution. These lists have been modified, ammended or supplemented from time to time. From the 1951 census onwards the census questionnaire contains items of enquiry to ascertain whether the respondent belongs to SC or ST and if yes, the name of the caste/tribe to which he belongs.
- Table 9.- Density of population is defined as the number of persons per square kilometer in the Indian census.
- Table 10.- Sex ratio is defined as the number of females per thousand males in the population.
- A person is considered to be a migrant Table 11.if his/her place of enumeration (Villa -ge/town ) is different from the last (previous) usual residence. The usual residence for the purpose of census is taken to be the person staying continu -ously for a period of six months or more. However, the visit of married women (staying sometimes more than six months) to their parents house for child birth or for any other reason are not considered as migratory movement. Again, movement from one locality to another within the same town or village is not considered as migration.
- Table 13.- The Sample Registration System of the Registrar General is a dual record system with the primary objective of providing reliable estimates of birth

and death rates for rural and urban areas. The field operations consist of continuous enumeration by local parttime enumerators. Once in six months the supervisory staff, who are full timers, conduct a retrospective survey to arrive at an independent set of vital events which are then matched. The unmatched and partially matched events are re-verified in the field.

Crude Birth rate(CBR) is defined as the number of live births per thousand population in any given year.

Crude Death Rate(CDR) is defined as the number of deaths per thousand population in any given year.

Natural Growth Rate = Crude birth rate-Crude death rate

- Table 14.- Age-specific mortality rate is defined as the number of deaths in specific age -group per thousand population in the same age-group in a given year.
- Table 15.- Age-specific fertility rate is defined as the number of live births in a specific age-group of women per thousand female population of that age-group.
- Table 16.- Infant mortality rate refers to the measurement of mortality in the first year of life and is computed by relating the number of deaths under one year of age to the annual number of live births.
- Table 17.- The expectation of life at birth is the average number of years expected to be lived at the time of birth if current mortality trends were to continue. These expectations are based on life table derived by comparing the population p(1)x at age x in one census

with their survivors reported at age p(2) x+10 in the next census. From the 10 year survival ratios, survival ratios for individual years have been estimated. For younger and older ages, special methods have been adopted.

With these survival ratios  $(p_{\boldsymbol{x}})$  and smoothed-age data, mortality rates  $(q_{\boldsymbol{x}})$  are worked out and the life table is prepared, the last column of which gives the expectation of life at age x. The life tables are also prepared with the age-specific death-rates obtained by the Sample Registration System.

### 2. ENVIRONMENT

- Table 18.land available per person has Forest been worked out by dividing the area under forest, as given by the Ministry of Agriculture by the population figures for the correspondening year. The figures given by the Ministry of Agriculture under Permanent pasture and other grazing land, miscellaneous tree crops and groves not included in net sown area, cultivable waste land and fallow land have been added to obtain the total agricultural land This was divided by the rural figure for average availability of agricultural land for each person in rural areas.
- Table 19.- This table presents data regarding percentage distribution of the total reported area by land use. The different categories of land utilisation are as under:-
  - Forest :- Includes area actually under forest or land classified or administered as forests under any legal enactment.

Not available is land which is absoutely barren for cultivation or uncultivable or covered by buildings, walls, roads, railways

mountains, deserts etc.

Permanent pastures and other grazing land: cover all grazing land whether they are permanent pastures and meadows or not and village common grazing land.

Land under misc. tree crops and groves not included in net area sown includes all cultivable land not included under area sown but put to some agricultural use.

Cultivable waste land:

includes all land available for cultivation but not taken up for cultivation or taken up for cultivation once but not during the last five or more years.

Fallow land:

all land which were taken up for cultivation but are temporarily out of cultivation for a period not less than one year and not more than five years.

Net area sown:

For computing the net area sown area sown more than once has been counted only once.

# 3. HEALTH AND FAMILY WELFARE

Table 20. - Taking into account the attrition due to ageing (going out of the reproductive age-group), mortality and in the case of IUD, additional factors of expulsions and removals, the number of couples currently protected by the different methods of family planning as a percentage of the estimated number of eligible couples in the country gives the percentage of couples currently protected.

Table 28.-The figures used in this table are from National Accounts Statistics. Total expenditure on health, education, social security & welfare services includes both current and capital expenditure. Current expenditure includes consumption expenditure subsidies, current transfer to local authorities and other current transfer payments. Capital expenditure includes gross fixed capital formation, changes in stocks net investment in shares, capital transfer to local authorities, other capital transfer payments loans and advances to local authorites and domestic sector. The total expenditure excludes local authorities and consumption on fixed capital The expenditure under education, health etc. include expenditure on administration, regulation and research also. Per capita expenditure has been worked out by dividing the total expenditure by mid year (as on 1st Oct. ) population.

#### 5. HOUSING AND TRANSPORT

Table 36.- Road length per thousand persons has been worked out by dividing the road length figures published by the Ministry of Surface Transport with the annual estimates of population worked out for various years by the office of the Registrar General of India by taking into account the population of 1981 Census. Similarly the number of registered motor vehicles per thousand has also been worked out in the same manner.

#### 6. EDUCATION

Table 37.- A person who can both read and write with understanding in any language is considered as literate and a person who can merely read but cannot write is taken to be as literate. It is not necessary that a person who is literate should have received any

formal education or should have passed minimum educational standard. For calculating the literacy rate (literate per 1000 population) the denominator is the corresponding section of the total population. For all ages (both sexes) it is the total population.

rable 39.- Gross enrolment ratio measures what percentage of the total population in the relevant age-group is being covered by the various educational programmes being run in the country, i.e.,

Gross enrolment Enrolment at stage i
ratio at stage i = ----- X 100
population in the age
group corresponding
to the ith stage

Two stages are: primary (Classes I-V) and middle (Classes VI-VIII).

The corresponding age-group for these stages are 6-11 years and 11-14 years respectively. Therefore, gross enrolment ratio for primary stage (I-V) is

Total Enrolment in Classes I-V
----- X 100
Total population in the age
group 6-11 years

While interpreting these figures it should be noted that there may be many students outside the age-group 6-11 enrolled in classes I-V. Therefore, enrolment ratios in some age groups can be more than 100.

- ole 40.- This table gives the status of female education at different levels.
- Table 42.- The pupil-teacher ratio is defined as the average number of students per teacher for a particular type of school, e.g.,

Pupil-teacher ratio for secondary school Total number of teachers in secondary school

Table 46.- Dropout rate in different stages of school education

## Dropout rate:

Dropout at primary stage during a given year is defined as the ratio of the difference of enrolment in class I in the fourth year preceding and the enrolment in class V during the year to the enrolment in the class I in the fourth year preceding. In mathematical terms, these rates for primary (I-V), middle (I-VIII) and secondary (I-X) stages are defined as:

Drop out rates at Primary stage during the year 91-92 Enrolment in class I preceding four years (i.e.1987-88) minus Enrolment in class V during the year (1991-92)

Enrolment in class I preceding four years (i.e.1987-88)

Drop out rates at Middle stage (classes I-VIII) duning 1991-92 Enrolment in class I preceding 7 years (i.e.1984-85) minus Enrolment in class VIII during the year (1991-92)

Enrolment in class I preceding 7 years (i.e.1984-85)

Drop out rates at High School stage (classes I-X) during the year 1991-92 Enrolment in class I preceding 9 Year (i.e. 1982-83) minus Enrolment in class X during the year (1991-92)

Enrolment in class I preceding 9 years (i.e.1982-83)

#### 8. LABOUR AND EMPLOYMENT

Table 55.- NSSO surveys have adopted three different approaches to measure employment and unemployment. According to usual status approach, a person is considered as work-

ing or employed if he/she is engaged relatively for a longer time, during the reference period of last 365 days in any one or more of the work activities. He/she was considered as seeking or available for work or unemployed if he/she was not working but was either seeking or available for work for a relatively longer period of the specified reference period. According to current weekly status, a person is considered to be employed if he/she pursues any one or more of the gainful activity for atleast one hour on any day of the previous week. On the other hand, if a person does not persue any gainful activity but has been seeking or available for work, the person is considered as unemployed. According to current daily status, a person is considered as employed for the entire day of the reference period of one week if he/she had worked four hours or more during the day. If he had worked for more than one hour or more but less than four hours, he is considered for working as half day and seeking/available for work for other half of the day. If a person is not engaged in any work, even for one hour on the day, but was seeking/available for work for four hours or more, he is considered as unemployed for the entire day The aggregate of day units, either half or full under different activity categories during the reference week divided by seven provides the estimates of average number of persons days by activity category during an average week over the survey period of one year.

Table 57.- The data used in this table are based on the Employment Market Information (EMI) programme of the Directorate General of Employment and Training. The EMI covers on a statutory basis, all establishment in the public sector and all non-agricultural establishments employing 25 persons or

more in the private sector. From March 1966, the coverage was increased and establishments employing 10 persons or more in the private sector were added, though on a voluntary basis. The EMI programme does not cover employment in the unorganised sectors like agriculture, self-employed persons and establishments in the private sector employing less than 10 workers.

Table 58.- Data given in this Table is based on the census of Government Employees which is conducted every year by the Directorate General of Employment and Training (DGET).

The census cover all persons actually holding on the date of census, civiian post in and under the Central Government, whose pay and allowances, honorarium, or any other renumeration etc are paid out of the consolidated fund of India.

# Regular Staff:

- (i) Permanent employees : One who holds a Central or State Governments post substantively on the date of the census.
- (ii) Temporary employees: The employees who has not been declared permanent in the post he is holding or in any other substantial post.

# 2. Non-Regular staff:

This category of employees census includes state government employees on deputation to Central Govt. Honarary employees, besides regular work - charged employees, part time employees of the Central Govt. employees paid out of contigencies and whole time or part time employees in Indian embassies and missions abroad including locally recruited staff

subject to discharge on not less then one month's notice and employees of ad hoc committees set up by the Central Government.

#### Indices:

The indices in the table have been worked out for all the years by taking 1971=100 both for total (Regular & Non-Regular) and Regular Employees of the Central Government.

- Table 59.- The day to day registration at employment exchanges and notification of vacancies by the employers generate comprehensive information which facilitates the appraisal the organised labour market. The statistical returns from employment exchanges relating to various characteristics of job seekers fresh or otherwise, and the demand pattern of employment in industry and service sector provide only a broad indication of the unemployment situation in the organised labour market. However, registration is voluntary and they are as located in urban areas, they cannot be deemed to cover all job seekers: Further, there are known defeciencies arising from the fact that not all the registrants would be really without a job. Moreover, the number of job seekers is not necessarily the number of unemployed persons.
- Table 62.- Under the Factories Act, statistics of injuries resulting from industrial accidents by reason of which persons affected are prevented from attending to work for a period of 48 hours or more immediately following the injury are required to be reported to the factory inspectors. For statistical purposes the number of injuries is given by the number

of persons receiving injuries as a result of accidents and this number can be more than the actual number of accidents because one accident may result in injuries to more than one person. The data on injuries relate only to the factories submitting returns, as no estimates of injuries can be made for the defaulting factories.

The frequency rate of injuries is calculated by dividing the total number of injuries by the corresponding man-days worked. Incidence rate gives the injuries per thousand persons employed

Table 63.- An industrial dispute is taken to be a temporary stoppage of work by all employees or a group of employees of an establishment (strike) to express a grievance or to press a demand. Similarly, temporary withholding of work from a group of employees by an employer or a group of employers (lockout) in a unit in connection with matters relating to employment or unemployment or terms and conditions of employment is also taken as an industrial dispute. Only those work stoppages which involve 10 or more workers whether directly and /or indirectly are included in these statistics. The figures of man-days lost are obtained by adding up the resultant vacancies caused directly and/or indirectly, during work stoppage in each shift of each potential working day (excluding weekly offs and other scheduled holidays when the establishment would have remained closed even if no work stoppage had taken place).

#### 9. INCOME AND CONSUMPTION

Table 64.-Household consumption expenditure comprises of all expenditufre incurred by the household, exclusively on domestic account, including consumption out of home-grown produce or transfer receipt like gifts, loan etc. The expenditure on household enterprises is excluded from consumer expenditure. While consumption out of transfer receipts is included, transfer payments of all kinds such as loans, gifts, charities in money or in kind like grain loan etc. are excluded. Expenditure on purchase and construction of residential houses are considered to be expenses on capital account and hence are excluded from the consumer expenditure; but the expenditure towards maintenance of residential building is included in the consumer expenditure off the household.

Fable 65.- Per capita income for a particular year is obtained by dividing the net national product at factor cost by the estimated mid-year population in that year. Since the national income is calculated for the financial year, the estimated population corresponds to mid-financial year i.e. 1st October.

The estimates of per capita income corresponding to the New series had been calculated after comprehensive review of both the data base and the methodology employed in the erstwhile old series. Bfforts have been made to make use of as much as possible of the current data available through various all-India surveys. Revised procedures and methodological improvements had been adopted to derive the intermediate items. The coverage of the New series had also been enlarged so as to include the state of Sikkim.

- Table 66.- Percentage of population below the poverty line is worked out on the basis of house hold consumption expenditure data released by the NSSO in its 43rd Round report No.372 titled "Report on the 4th Quinquennial Survey on Consumer expenditure, NSSO, June, 1990"
- Table 67.- The data given in this table has been taken from a paper entitled "Human Development Index for India" published in IASSI, Quarterely Volume 10 Number 2, 1991, by Dr. J.B.G. Tilak of National Institute of Educational Planning and Administration, New Delhi. Human Development Index was released for the first time by the UNDP for 130 countries of the world in 1990. The UNDP has defined human development as the process of enabling people who have wider choices. Income is one of those choices but it is not the total of human life. Health, education, a good physical environment and and freedom of action and expression are just as important. The Human Development Index (HDI), therefore, combines indicators of national income life expectancy and educational attainment to give a composite measures of human progress.

Mathematically index can be derived as follows:-

First, a measure of deprivation ( $I_i$ ) of each indicator ( $X_i$ ) relating

to j-th country is defined as follows:-

$$\text{Iij} = \frac{(\max X_{ij} - X_{ij})}{(\max X_{ij} - \min X_{ij})}$$

Them, an average deprivation indicator is estimated by simply taking the average of three deprivation indicators defined above, i.e.,

$$I_{j} = \begin{pmatrix} 3 & I_{ij} \end{pmatrix} / 3$$
 $i = 1$ 
 $i = 1$ 

and finally, HDI is defined as one minus the average deprivation index,

$$(HD)I)_{j} = (1-I_{j})$$

Same methodology has been used by Dr. Tilak to compile the value of HDI for 17 states India for which relevant data is avadilable. Based on the 1981 population cemsus, estimates on expectancy of life at birth are made for 15 states, relating to the period 1986-91 (in fact upto 2001), and based on earlier set of data, such data are available for two more states, viz., Jammu and Kashmir and Himachal Pradesh for 1981-86. Literacy figures are now available for 1991, based on the 1991 census population aged 7 and above. As adult litteracy rates are not separately available, the same are used here. For Jammu and Kasshmir, literacy rates as per the 1981 cemsus, are used, as the 1991 census did not cover this state. The third indicator is the state income. Estimates on: net state domestic product per capita (SIDP) in current prices in 1988-89, the lattest year for which such data are available, are used here, and for Jammu and Kashmir the 1986-87 data are taken into account (Ministry of Finance, 1991). Since the present attempt is for one country, and for one point of time, it: is felt that there is no need to make anny adjustment for prices, or for real purchasing power, as attempted by the UNDP.

Table 68.- The change in prices over a period of ttime can be gauged by the statistical devicee of Index Number of prices. There are fcour types of price indices series viz. consumer price index number (CPI) for (a) Industrial workers (b) Urban nonmanual employees (UNME) (c) Agriculturaal labourers and the fourth is the index number of wholesale prices. The latest series for CPI of industrial workers relates to the base 1982 = 100 for 70 centers while the agricultural labour series with base 1960-61 = 100 covers 15 states or group of states. The CPI for UNME having the latest base 1984-855 = 100 covers 59 selected urban centers The wholesale price index has the latest base 1981-82 = 100 covering 447 distinct commodities. CPI for industrial workers and agricultural labour are released on a monthly basis by the Labour Bureau. Ministry of f Industry and Central Statistical Organisation are responsible for releasee of wholesale price index and CPI for UNME respectively.

# 11. PUBLIC ORDER AND SAFETY

- Table 75.- Percentage of cases pending investigatation means cases pending investigation at there end of the year to total cases for investigation Percentage of cases pending trial relatees to cases pending trial at the end of the yevear t total cases for trial. Conviction percementage refers to cases resulting in conviction t total cases for which trials were completed
- Earlier Juvenile boys and girls were:e of Table 76.tne same age group (i.e. below 21 yezears) Since 1988 Juvenile boys and girls arre of different age groups (i.e. boys below 1 16 years and girls below 18 years)
- Table 77.- Incidence of suicides per lakh of populatation has been worked out on the basis of sex-t-wise estimated annual population supplied by the office of the Registrar General, India bayased on 1981 and 1991 Censuses.
