PREFACE

Regional imbalances in the field of educational development prevailing in the country have to be reduced in order to create an infrastructure for a egalitarian society. For this purpose it is essential to make collection of statistics from different regions.

To highlight the regional disparities in educational developments in different regions of the country it was decided to collect the educational statistics on district-wise basis and publish quinquennially viz. once in five years. Accordingly such statistics was collected and published by NCERT for the year 1960-61. Afterwards the study was repeated for the years 1965-66 and 1970-71 by the Ministry. The current publication relates to the data for the year 1976-77.

I take this opportunity to express my thanks for the supply of the required data and other help received from the office of the Director of Education, Government of Maharashtra for bringing out this publication.

INTRODUCTION

The Ministry of Education & Culture collects and publishes the educational statistics at State level on annual basis. However, keeping in view the wide disparities within a State, educational data at district level is collected and published on quinquennial basis separately for each State. This Volume is the Twenty-Second in series of the educational statistics - district-wise for the years 1970-71 - 1976-77.

2. For making inter-district comparisons, important educational indicators such as enrolment ratio, co-efficient of equality for scheduled castes & scheduled tribes, teacher-pupil ratio, cost per student and population served by an institution etc. have been worked out at district level. These indices show wide range of variation among the districts and are of great use for formulating educational development plans at district level as recommended by the Education Commission.

II - AREA AND POPULATION

3. Maharashtra State consists of 26 districts. The number of districts in the State remained the same during the period 1971 to 1977. The total area of the State being 3.08 lakh sq. kms. also remained the same during the period under review. Among the districts the area varies from as high as 25,641 sq. kms. in case of Chanda to as low as 603 sq. kms. of Greater Bombay.

4. The total population of the State was 504.12 lakhs (261.16 males and 242.96 females) in 1971 as per Census. Among the districts the highest population was 34.78 lakhs in Greater Bombay and the lowest was 6.14 lakhs in Kolaba. The population of the State is estimated to have increased to 568.24 lakhs (293.60 lakhs males and 274.64 lakhs females) in 1977. The annual growth of the population works out to be 2.12% during the period under consideration.

5. The density of population for the State as a whole was 164 per sq. km. in 1971 which is estimated to have increased to 185 by the year 1977. In 1977 the highest density of population was 1116 in Greater Bombay and the lowest in Chanda 72. Statement (1) depicts the district-wise information on area, population and density of population figures for the years 1971 and 1977. Table (1) below gives district-wise percentage share of area and percentage share of population for the year 1977.

6. Total population of the districts and the State for the year 1971 has been taken the same as in Census.

Population of different age-groups of the State for the years 1971 and 1977 as on 31st March of the respective year are based on the population estimates available from the office of the Registrar General of India whereas the district-wise population estimates for the age-groups 6-11, 11-14 and 14-17 for the year 1976-77 (as on 1.3.1977) have been worked out by using the following formula:-

We assum that -

$$\frac{P_{6-11}}{P} = \frac{P_{6-11}^i}{P_i} = K, i = 1, 2, 3, 4$$

$$\therefore P_{6-11} = K P$$

Where K is estimated from the formula, $K = \frac{P_{6-11}}{P}$

P_{6-11} = 6-11 age-group population of the State

P = Total population of the State

P_{6-11}^i = 6-11 age-group population of the ith district

P_i = Total population of the ith district

7. For getting sex-wise break-up of the population in various age-groups first the girls population is estimated by the above formula by replacing total population by the girls population. Boys population can be obtained by subtracting estimated girls population from the total estimated population.

8. Of the total population for the age-group 6-11 was 75.73 lakhs (38.53 lakhs boys and 37.24 lakhs girls) forming 13.3% in 1976-77. Population in age-group 11-14 was increased from 35.50 lakhs in 1971 to 42.37 lakhs (21.48 lakhs boys and 20.89 lakhs girls) in 1977. Population for age-group 14-17 was 31.04 lakhs (16.21 lakhs boys and 14.84 lakhs girls) in 1971 which increased to 38.89 lakhs (19.92 lakhs boys and 18.97 lakhs girls) in 1977.

9. Thus of the total population of 568.24 lakhs in 1977 school going population in age-group 6-17 was 157.06 lakhs (79.90 lakhs boys and 77.12 lakhs girls) forming 27.6%. School going population of boys is 30.6% and for girls 31.7% in 1977. District-wise estimated population figures for different age-groups are given in Statement (2).

The total expenditure incurred on these schools increased in all the districts and doubled in 8 districts during the period under consideration. Among the districts expenditure incurred on middle schools varies from the highest of Rs.13.34 crores in Greater Bombay to Rs.47.78 lakhs in Wardha followed by Rs.94.17 lakhs in Nagpur in 1976-77.

This implies that when cost per student increased pupil teacher ratio decreases and when cost per student decreased pupil teacher ratio increased. Statement (18) indicates the district-wise details of expenditure on middle schools, expenditure per head of population, cost per student and pupil teacher ratio. Table (5) below indicates percentage of educational expenditure to the total expenditure, expenditure per head of population and cost per student for the districts separately.
