

Report No. 516(61/10/2)

Employment and Unemployment Situation Among Social Groups in India 2004-05

**NSS 61st ROUND
(July 2004 – June 2005)**

**National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India**

October 2006

Preface

Keeping in view the necessity of reliable and up to date data regarding employment situation in the country, the National Sample Survey Organisation (NSSO) has been conducting quinquennial surveys on employment and unemployment in India since 1972-73. The seventh and latest such survey was conducted by the NSSO in the 61st round during the period July 2004-June 2005. The first report (No.515) giving the main results on different aspects of employment and unemployment has already been released in September 2006. This report, being the second in the series of seven reports planned on the basis of employment and unemployment data from the 61st round, presents information on selected aspects of employment and unemployment and some other features pertaining to people belonging to four social groups viz. Schedule Caste (SC), Schedule Tribe (ST), Other Backward Class (OBC) and others.

This report contains three chapters including the introductory Chapter One and three appendices. Chapter Two describes in detail the concepts and definitions of only those terms used in the survey in connection with various items covered in this report. Chapter Three discusses the main findings of the survey with respect to the different social groups. The detailed all India tables based on which this report is brought out are presented in Appendix A. Appendix B and C give respectively the details of the sample design and estimation procedure, and facsimile of schedule of enquiry canvassed in the field.

The Survey Design and Research Division (SDRD) of NSSO undertook the development of the survey methodology as well as drafting of the report. The field work was carried out by the Field Operation Division (FOD) of NSSO while the data processing and tabulation work was handled by Data Processing Division (DPD) of NSSO. The Co-ordination and Publication division (CPD) of NSSO coordinated various activities pertaining to the survey.

I am thankful to the Chairman and the Members of the Working Group for the 61st round and Chairman and Members of the Governing Council of NSSO for providing technical guidance at various stages of survey activities.

I hope, the contents of this report will be extensively used by planners, policy makers, academicians, researchers etc in their respective sphere of activities. Suggestions from readers will be highly appreciated.

(Vishnu Kumar)
Director General & Chief Executive Officer
NSSO

New Delhi
October 2006

HIGHLIGHTS

This report is based on the seventh quinquennial survey on employment and unemployment conducted in the 61st round of NSS during July, 2004 to June, 2005. The survey was spread over 7,999 villages and 4,602 urban blocks covering 1,24,680 households (79,306 in rural areas and 45,374 in urban areas) and enumerating 6,02,833 persons (3,98,025 in rural areas and 2,04,808 in urban areas). The number of sample households for the social groups *scheduled tribe* (ST), *scheduled caste* (SC), *other backward class* (OBC) and *others* at the all-India was 16203, 20284, 46348 and 41759, respectively. In this report, estimates of the employment-unemployment indicators for various social groups have been presented with respect to the *usual status* (ps+ss). Some of the key findings are stated below.

A Household and Population

- A little over 73 per cent of the households belonged to rural India and accounted for nearly 75 per cent of total population.
- About 9 per cent of the households in the country belonged to the category *scheduled tribe* (ST), about 20 per cent belonged to *scheduled caste* (SC) and about 40 per cent belonged to the *other backward class* (OBC). The proportions of households belonging to the categories ST, SC and OBC were about 11 per cent, 22 per cent and 42 per cent, respectively in the rural areas and about 3 per cent, 15 per cent and 36 per cent, respectively in the urban areas.
- About 8 per cent, 20 per cent and 41 per cent of the Indian population belonged to the categories ST, SC and OBC. The proportions of persons belonging to the categories ST, SC and OBC were 10 per cent, 21 per cent and 43 per cent, respectively in the rural areas and about 3 per cent, 15 per cent and 36 per cent, respectively in the urban areas.
- During 2004-2005, the household size in the rural areas was the lowest among the STs (4.6). In the urban areas, it was lowest for both the STs and *others* (4.3 each).
- During 2004-2005, the over all sex ratio in India was 951 females per 1000 males. The sex ratio was 959 among the STs, 954 for both the SCs and OBCs, and 943 among *others*.
- In rural India, proportion of households depending on *self-employment* was higher among the *others* category of households (61 per cent) or among OBC category of households (56 per cent) as compared to that among the ST (46 per cent) or SC (34 per cent) households. In urban India too, proportion of households depending on *self-employment* was higher among the OBC households (40 per cent) and *others* category households (39 per cent) as compared to that among the ST (26 per cent) or SC (29 per cent) households.

- The proportion of households possessing land of size 4.01 hectares or more was the maximum for *others* category of households (6 per cent), followed by the OBC (4 per cent), ST (about 3 per cent) and SC households (1 per cent).
- The proportion of households cultivating larger holdings of size 4.01 hectares and above was the highest among *others* category of households (about 5 per cent), followed by the OBCs (about 3 per cent), followed by the STs (2 per cent) and the SCs (1 per cent).
- In the rural areas, the proportion of households in the highest MPCE class (i.e. those who spent Rs. 1155 or more per month) was higher among *others* category of households (12 per cent) than among the OBCs (5 per cent), SCs (3 per cent) or STs (2 per cent). The proportion of urban households in the highest MPCE class (i.e. those who spent Rs. 2540 or more per month) was higher among *others* (13 per cent) category of households than among the OBCs or STs (3 per cent each) or SCs (1 per cent).
- About 26 per cent of the households in the rural areas and 8 per cent in the urban areas, had no literate member of age 15 years and above. The proportion of households without any literate adult (15 years and above) member or without any literate adult female member was much higher among the households belonging to the STs and SCs compared to the OBCs or *others* category households in both rural and urban India.
- In the rural areas, for every 1000 households, about 17 households reported that at least one male member had got the work in public works, whereas only 8 households reported that at least one female member had got the work in public works for at least 60 days during the last 365 days. Among the social groups, the incidence is found to be highest for the STs, followed by the SCs and OBCs.
- About 34 per cent people of India were illiterate. The literacy rate was the highest among the *others* (78 per cent) category of people, followed by the OBCs with a gap of nearly 13 percentage points, and the lowest among the STs (52 per cent).
- In the rural areas, the current attendance rate in educational institutions was much higher among the children and the youth belonging to the *others* category of households. In urban India, current attendance rate was much higher for STs than that for SCs.

B Labour Force

- According to the *usual status* (ps+ss), about 56 per cent of rural males and 33 per cent of rural females belonged to the labour force. The corresponding proportions in the urban areas were 57 per cent and 18 per cent, respectively.

- The proportion of persons in the labour force was the highest among the STs, followed by the SCs, OBCs and *others*. The labour force participation rate, according to *usual status* (ps+ss), for these groups were 51 per cent, 44 per cent, 43 per cent and 40 per cent, respectively.

C Work Force

- According to the *usual status* (ps+ss), about 42 per cent of the population in the country was usually employed. The proportion was 44 per cent in the rural and 37 per cent in the urban. About 55 per cent of rural males and 33 per cent of rural females were employed. The corresponding proportions in the urban areas were 55 per cent and 17 per cent, respectively.
- The Worker Population Ratio (WPR) according to the usual status (ps+ss), was the highest among the males (56 per cent) and females (44 per cent) belonging to the STs (50 per cent). In urban India, however, the proportion of persons employed was the same among SC and ST workers (38 per cent each) and was about 35 per cent among others.
- Among the rural males WPR was higher for persons belonging to STs (89 per cent) and SCs (86 per cent) than that for OBCs (85 per cent) and others (82 per cent). However, for the educated (i.e., persons with general educational level secondary and above) rural males, WPR for OBCs and *others* was higher (76 per cent each) than that for the STs and SCs (72 per cent each). Among urban educated males, WPR was the highest for OBCs (79 per cent) and the lowest for *others* (74 per cent). For females, WPR was the highest among the STs followed by SCs, OBCs and *others*.

D Unemployment Rate

- In the rural areas, among both males and females, the proportion of chronically unemployed was the highest for the *others* category of persons. Between the two categories of STs and SCs rural households, proportion of chronically unemployed among the males and females was higher among the SCs than among the STs.
- Among the urban males, the proportion of chronically unemployed was the highest among SCs, followed by that among the *others* category. For urban females, the proportion of chronically unemployed was slightly lower for SCs and STs than for those belonging to the OBCs or *others* category.

Table No.	Title	Page
Table (S1)	Per 1000 distribution of households by household monthly per capita expenditure class for each household social group	A-1
Table (S2)	Per 1000 distribution of households by household type for each household social group	A-2 – A-3
Table (S3)	Per 1000 distribution of households by size class of land possessed for each household social group for rural areas	A-4
Table (S4)	Per 1000 distribution of households by size class of land cultivated for each household social group for rural areas	A-5
Table (S5)	Number of households with no literate member/female member of age 15 years and above per 1000 households for each social group	A-6
Table (S6)	Per 1000 distribution of households by the number of members who got work for at least 60 days in ‘public works’ during the last 365 days for each household social	A-7
Table (S7)	Per 1000 distribution of persons by age-group for each social group	A-8 – A-10
Table (S8)	Per 1000 distribution of persons by general education level for each household social group	A-11 – A-16
Table (S9)	Current attendance rates in educational institutions per 1000 persons of the specified age group for each social group	A-17 – A-22
Table (S10)	Per 1000 distribution of persons by usual activity (ps+ss) category for each age-group	A-23 – A-67
Table (S11)	Per 1000 distribution of persons of age 15 years and above by usual activity (ps+ss) category for each general educational level	A-68 – A-112

Chapter One

Introduction

1.1 The Report in Perspective

1.1.1 An all-India survey on the situation of employment and unemployment in India was carried out during the period July, 2004-June, 2005 as a part of the 61st round of the National Sample Survey Organisation (NSSO). In this survey, information on various facets of employment and unemployment in India and some characteristics associated with them at the national and state level was collected through a schedule of enquiry (Schedule 10). Information on social group was also collected as an associated characteristic for studying the employment and unemployment situation among the various social groups in the country. Based on the data collected, estimates pertaining to some key indicators of employment-unemployment of people belonging to different social groups in India, along with certain features associated with them have been presented in this report. In the survey, information in respect of four social groups viz. *scheduled caste* (SC), *scheduled tribe* (ST), *other backward class* (OBC) and *others* was collected. The social group to which the head of the household belonged was defined as the social group of that household and all the members of the household, irrespective of their own social group, were assigned the social group of head of the household. The information recorded in this regard was based entirely on the response of the informant and not based on any state level list of social group.

1.2 Background

1.2.1 One of the important surveys conducted by the NSSO is the quinquennial survey on employment-unemployment. The first such survey was done during September 1972 - October 1973 corresponding to the 27th round of NSSO. The present survey is the seventh in the series.

1.2.2 *Past Quinquennial Surveys*: To assess the volume and structure of employment and unemployment, starting with the 9th round (May - September, 1955), NSSO conducted a number of surveys on employment and unemployment. To give a firm conceptual framework for conducting such surveys, the Planning Commission, in the year 1970, set up an "Expert Committee on Unemployment Estimates" (popularly known as the Dantwala Committee), which reviewed these surveys and the indicators generated from such surveys. Based on concepts and definitions recommended by this committee, the first quinquennial survey on employment and unemployment was conducted in the 27th round of NSS (September 1972 - October 1973). After the 27th round, five comprehensive quinquennial surveys on employment and unemployment situation in India have been carried out by the NSSO prior to the present quinquennial survey. These were carried out during the 32nd round (July 1977 - June 1978), 38th round (January 1983 - December 1983), 43rd round (July 1987 - June 1988), 50th round (July 1993 - June 1994), and 55th round (July 1999 - June 2000), in which concepts, definitions and procedures were based primarily on the recommendations of the Dantwala Committee. The results of these surveys have been brought out in the form of NSS reports.

1.2.3 *Other surveys on employment-unemployment*: Apart from the quinquennial surveys on employment and unemployment, NSSO has been regularly collecting information on certain key items on employment and unemployment from a limited set of households in each round since its 45th round (July 1989 – June 1990), known as annual series, through the schedule on Household Consumer Expenditure (Schedule 1.0). In the annual series, only some key particulars on the usual and current weekly status of the individuals were collected, and the current weekly status of a person was determined through a direct query. In the 60th round (January – June 2004), there was a change in the procedure of collecting information on employment and unemployment. During the formulation of NSS 60th round survey, the Planning Commission pressed their need for collection of data on the current daily status of employment and unemployment annually as well. The collection of data in the current daily status necessitated the separation of two enquiries on Household Consumer Expenditure and Employment-Unemployment, and as a result, a separate schedule on employment and unemployment (Schedule 10) was canvassed in the 60th round, in which concepts, definitions and procedures were similar to the quinquennial rounds. The results of such surveys, have been published in the form of NSS reports.

1.2.4 *The present survey*: The seventh quinquennial survey on employment and unemployment was conducted by NSSO in its 61st round (July 2004 – June 2005). In this survey, apart from the information usually collected in the quinquennial rounds, information on some new items has been collected. This has been done following the suggestions made by the Working Group set up to finalise the survey methodology and schedules of enquiry of the 61st round. Some of the more important among them, which have enlarged the scope of the survey, are stated below:

a) Certain information on informal employment¹ has been collected from all usual status workers with respect to their principal work activity and/or their subsidiary activity, engaged in non-agricultural sector as well as in the agricultural sector excluding only growing of crops, market gardening, horticulture and growing of crops combined with farming of animals. Indeed, according to NIC-98, information on informal employment has been collected from usual status workers engaged in industry groups 012, 014, 015 and divisions 10 to 99.

b) In the employment and unemployment surveys, data on wages have so far been collected for the employees according to the current daily status. In the 61st round survey, attempt has been made to assess the quality of self-employment in terms of the earnings through certain probing questions. From the self-employed persons according to the usual status, information on two items viz. ‘whether earning from self-employment was remunerative’ and ‘what amount per month was considered remunerative’ was collected in terms of codes.

c) Information on vocational training receiving/received by the persons of age 15 to 29 years has been collected. Further, among those who have received or are receiving ‘formal vocational training’, information on the ‘source from where degree/diploma/certificate received/ to be received’, ‘duration of training’ and ‘field of training’ has been collected.

¹ Since the 55th round, data on type of enterprise, number of workers in enterprise, etc. are being collected for measuring employment in the informal sector. These are worker-reported or self-reported details collected from households that may differ from the employer-reported details of the same variables that are mandatory under several acts governing the enterprises especially in the formal sectors.

d) Information on 'voluntary participation without remuneration in production of goods and services' has been collected for those members of the household who were not workers, considering both principal and subsidiary status, as per existing production boundary followed by NSSO.

e) Instead of collecting information on skill, information on 'seeking or available or suitable for the type of occupation' has been collected for the persons of age below 75 years who are not employed in the usual principal status.

f) Information on 'period of seeking/availability for work during the last 365 days' has been collected for all the persons of age 5 years and above. In the earlier quinquennial rounds, this information was collected only for those who were unemployed in the usual principal status.

1.3 Scope

1.3.1 As in the past, in the present survey too, NSSO collected data on some characteristics, based on which, estimates of employment and unemployment, measured in terms of 3 basic approaches viz. usual status, current weekly status and current daily status can be obtained. The reference period for these approaches differ - it being 365 days preceding the date of survey for 'usual status', 7 days preceding the date of survey for 'current weekly status' and each day of the 7 days preceding the date of survey for 'current daily status'.

1.3.2 Data were collected on the activity status of all persons, i.e. for workers, for those seeking or available for work and also for those remaining out of labour force. A worker could be self-employed or enjoy regular salaries/wages or be employed on casual wage basis. Data on this aspect, along with the industry of work of the worker and his/her occupation, were collected during this survey. In order to reveal the multi-dimensional features of the employment-unemployment situation in India, information on several correlates pertaining to it were also gathered. In addition, probing questions were put to the workers in order to understand the extent of underutilization of their labour time and acquire more specific information in this regard. An effort was also made to collect information on the qualitative aspects of employment like changes in activity status, occupation /industry, availability of trade unions/associations, nature of employment (permanent/temporary), etc. Data were also collected from the usual status workers, engaged in industry groups 012, 014, 015 and divisions 10 to 99 of NIC-98, with respect to some particulars of the enterprise in which they were engaged viz. location of work place, type of enterprises, number of workers in the enterprise etc. and some particulars on the condition of employment like type of job contract, eligibility for paid leave, availability of social security benefits etc. Data were also collected to get some idea about earning from self-employment. Information on vocational training receiving/received by the persons of age 15 to 29 years was also collected in the 61st round survey.

1.3.3 As in the past, information on social group was collected in the NSS 61st round for studying the employment and unemployment situation among the various social groups in the country. Information in respect of four social groups viz. *scheduled caste* (SC), *scheduled tribe* (ST), *other backward class* (OBC) and *others* was collected. Among the quinquennial rounds, data on Other Backward Class (OBC) were collected as a separate social group for the first time in the 55th round survey.

1.4 The survey outline

1.4.1 The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond 5 kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remained inaccessible throughout the year. All the sample first stage units of the district Poonch and Rajouri of Jammu & Kashmir, all rural samples of the district Doda of Jammu & Kashmir, and all rural samples of the district Nicobar of Andaman and Nicobar Islands became causality and therefore, the district Poonch and Rajouri of Jammu & Kashmir, rural areas of district Doda of Jammu & Kashmir and rural areas of the district Nicobar of Andaman and Nicobar Islands are outside the survey coverage. The fieldwork of the 61st round of NSSO started from 1st July, 2004 and continued till 30th June, 2005. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months, the 1st sub-round period ranging from July to September 2004, the 2nd sub-round period from October to December 2004 and so on. An equal number of sample villages/blocks (FSUs) were allotted for survey in each of these four sub-rounds. The survey used the interview method of data collection from a sample of randomly selected households.

1.5 Sample design

1.5.1 In the 61st round survey, a stratified multi-stage sampling design was adopted for selection of the sample units for rural as well as urban areas. The first stage units (FSUs) were the census villages (panchayat wards for Kerala) for rural areas and the NSSO Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USUs) were the households for both rural and urban areas. Hamlet-groups/sub-blocks constituted the intermediate stage whenever these were formed in the sample FSUs. For rural areas, the list of 2001 census villages constituted the sampling frame for selection of sample FSUs for most of the states. For the rural areas of Kerala, however, the list of panchayat wards was used as the sampling frame for selection of panchayat wards. For the urban areas, the latest lists of UFS blocks constituted the sampling frame for selection of sample FSUs. Within each district of a State/UT, two separate basic strata were formed for rural areas and urban areas. All rural areas of the district comprised rural stratum and all the urban areas of the district comprised urban stratum.

1.5.2 At the all-India level, a total number of 12788 FSU's (8128 villages and 4660 urban blocks) was allocated for the survey and this was allocated to the different States and UTs in proportion to population as per census 2001 which was then allocated between rural and urban sectors in proportion to population as per *census 2001* with 1.5 weightage to urban sector. Within each of the rural and urban sectors of a State/UT, the respective sample size was allocated to the different strata in proportion to the stratum population as per census 2001.

1.5.3 Within a district, if 'r' number of FSUs were allocated for a rural stratum, a total number of 'r/2' sub-strata were formed within that rural stratum. From each sub-stratum of the rural stratum of a district, two FSUs were selected with probability proportional to size with replacement (PPSWR), size being the population as per Population Census 2001. Within a district, if 'u' number of FSUs were allocated for a urban stratum, a total number of 'u/2' sub-strata were formed within that urban stratum. From each sub-stratum of the urban stratum of a district, two FSUs were selected with simple random sampling without replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both the rural and urban sectors. All households listed in the selected village/block/ hamlet-groups/sub-blocks were stratified into three second

stage strata (SSS). A total of 10 households were selected from each sample village/block for canvassing the employment and un-employment schedule. The sample households from each of the second stage strata were selected by SRSWOR.

1.5.4 Out of the total number of 12788 FSU's (8128 villages and 4660 urban blocks) selected for survey for the central sample, 12601 FSU's (7999 villages and 4602 urban blocks) could be surveyed at the all-India level for canvassing Schedule 10. The number of households surveyed was 1,24,680 (79,306 in rural areas and 45,374 in urban areas) and number of persons surveyed was 6,02,833 (3,98,025 in rural areas and 2,04,808 in urban areas). The sample design and estimation procedure used for the survey is given in Appendix B of the report.

1.6. Contents of the Report

1.6.1 Based on the data collected in NSS 61st round, estimates pertaining to the employment and unemployment situation among the various social groups in the country, along with certain other features associated with them have been presented in this report.

1.6.2 This report contains three chapters including the present introduction and three appendices. Chapter Two discusses the concepts and definitions of only those terms that are relevant in connection with various items covered in this report. Chapter Three presents the main findings of the survey with respect to the different social groups. The detailed all-India tables underlying this report are presented in Appendix A. Appendix B gives a fairly detailed description of the sample design and estimation procedure used for the survey, and Appendix C gives a facsimile of the schedule of enquiry canvassed in the field.

1.6.3 All the estimates presented in this report are based on Central sample data only. Further, the cell-level figures in any of the detailed tables, when added up, may not exactly be equal to the figure shown against the "total" column (or line) due to (i) rounding off and/or (ii) presence of non-response cases. It may be noted that the estimates of aggregates given in the detailed tables help only to combine ratios. To arrive at the absolute number in any category, the survey estimates of ratios are to be applied to the projected populations as on 01.01.2005, the mid-point of the 61st round survey period (July 2004 to June 2005).

1.7 Plan for release of results

1.7.1 It has been planned to bring out a series of seven reports on the basis of the employment and unemployment survey results of NSS 61st round. The present report is the second in the series. The first report, viz. Report No. 515 (Employment and unemployment situation in India, 2004-2005) dealt, in some detail, with the employment-unemployment estimates at all-India and state/union territory level measured in terms of the three basic approaches of usual status, current weekly status and current daily status. It also covered some aspects of underemployment and labour mobility. The other five reports to be released are: (i) Informal Employment in India: 2004 - 05, (ii) Employment and Unemployment situation in cities and towns in India: 2004 - 05, (iii) Participation of Women in the Specified Activities: 2004 - 05, (iv) Status of Education and Vocational Training in India: 2004 - 05, (v) Employment and Unemployment situation among Major Religious groups in India: 2004 - 05.

Chapter Two

Concepts and Definitions

2.0 The concepts and definitions of some important terms used in the survey and relevant to this report are explained in the following paragraphs.

2.1 **Household:** A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb “normally” means that temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer’s/host’s household. “Living together” was given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person’s family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments. The size of a household is the total number of persons in the household.

2.2 **Land possessed by the household as on date of survey:** The area of land possessed included land ‘owned’, ‘leased in’ and ‘land neither owned nor leased in’ (i.e. encroached) by the household but exclude land ‘leased out’. For a piece of land under the possession of the household, if the household did not have the title of ownership and also did not have lease agreement for the use of land transacted, either verbally or in writing, such land was considered as ‘neither owned nor leased in’. In collecting information regarding land possessed, the actual position as obtained on the date of survey was considered. The ‘area of land possessed’ did not include the area of land owned, leased-in, etc. by the servants/paying guests who were considered as normal members of the household. Information on land possessed by the household was collected in hectares up to three places of decimals.

2.3 **Land cultivated (including orchard and plantation) during July 2003-June 2004:** Land cultivated (including orchard and plantation) during the agricultural year 2003-2004, i.e., July 2003 to June 2004 was recorded considering cultivation of land from the land ‘owned’, ‘land leased-in’ or from ‘land neither owned nor leased-in’. Area with field crops and area under orchards and plantations was counted only once in the same year/ season. This information was collected in hectares up to three places of decimals.

2.4 **Household type:** The household types were assigned on the basis of the sources of the household's income during the last 365 days preceding the date of survey. For this purpose, only the household's income from economic activities was considered. The income of

servants and paying guests was not taken as the income of the household. Household types have been arranged as follows:

For the **rural** areas, household types were as follows:

- self-employed in:
 - agriculture (*code – 4*),
 - non-agriculture (*code – 1*),
- rural labour:
 - agricultural labour (*code – 2*),
 - other labour (*code – 3*),
- residual other households (*code – 9*).

For **urban** areas, the household types were as follows:

- self-employed (*code – 1*),
- regular wage/salary earning (*code – 2*),
- casual labour (*code – 3*),
- residual other households (*code – 9*).

2.4.1 Procedure for assigning household type codes in rural sector: For a **rural** household, if a single source (among the five sources of income listed in preceding paragraph) contributes 50% or more of the household's income from economic activities during the last 365 days, the type code (1, 2, 3, 4 or 9) corresponding to that source is assigned.

For a household to be classified as 'agricultural labour' or 'self-employed in agriculture' (code 2 or 4) its income from that source must be 50% or more of its total income. If there is no such source yielding 50% or more of the household's total income, code 1, 3 or 9 was given according to the following procedure.

To be classified as self-employed in non-agriculture (code 1), the household's income from that source must be greater than its income from rural labour (all wage-paid manual labour) as well as that from all other economic activities put together (a three-way division is to be considered here).

A household not getting code 1, 2 or 4 is to be classified as other labour (code 3) if its income from rural labour (all wage-paid manual labour) is greater than that from self-employment as well as that from other economic activities (again a three-way division). All other households will get type code 9.

For **urban** areas the different urban type codes correspond to four sources of household income, unlike the rural sector where five sources are considered. An urban household is to be assigned the type code 1, 2, 3 or 9 corresponding to the major source of its income from economic activities during the last 365 days. A household, which does not have any income from economic activities, is to get type code 9 (residual other households).

2.5 Household monthly per capita consumer expenditure (MPCE): For collection of data on total expenditure of the household from employment and unemployment schedule (Schedule 10), a worksheet was used in the Schedule 10 of the 61st round. The approximate value of consumer expenditure obtained through the worksheet has been used for studying employment and unemployment characteristics by different levels of living of the household members. The worksheet contained 36 different components of household consumer expenditure. Depending upon the type of item, either of the two reference periods viz., 30 days and 365 days, was used to record consumption of different groups of items. The items of consumption were classified into four groups and three different approaches viz. (a) consumption approach, (b) expenditure approach and (c) first-use approach, were followed for defining consumption of items. The different groups were (i) *food (other than 'cooked meals')*, *pan, tobacco & intoxicants and fuel & light*, (ii) *cooked meals, miscellaneous goods and services including education, medical, rent, taxes and cess*, (iii) *clothing and footwear and (iv) durable goods*. The procedure followed for defining consumption of the four groups were (a) *consumption approach*, (b) *expenditure approach*, (c) *first-use approach* and (d) *expenditure approach*, respectively.

2.6 Social group: For each household surveyed, the social group to which the head of the household belonged to was collected. The social group of the head of the household was considered as the social group of all the members of the household irrespective of the actual social group to which the individual members belonged. In the survey, information in respect of four social groups viz. *scheduled tribe (ST)*, *scheduled caste (SC)*, *other backward class (OBC)* and the rest referred to as *others* was collected. The information recorded in this regard was based entirely on the response of the informant and not based on any state level list of social groups.

2.7 Public works: Public works was defined as those activities which were sponsored by Government or Local bodies and which covered local area development works like construction of roads, dams, bunds, digging of ponds etc. as relief measures, or as an outcome of the employment generation schemes under the poverty alleviation programmes.

2.8 General educational level: A person was considered as literate if he/she could both read and write a simple message with understanding in at least one language. For all the individuals who were found to be literate, the information on general level of education was collected in terms of highest level of education successfully completed. Highest level of education successfully completed by each member of the household was decided by considering his/ her all general/ technical/ vocational educational level and was recorded in terms of 12 categories viz. (i) *not literate*, (ii) *literate without formal schooling: (a) Education Guarantee Scheme (EGS)/Non-formal Education Courses (NFEC)/ Adult Literacy Centres (AEC)*, (b) *Total Literacy Campaign (TLC)*, (c) *others*; (iii) *literate but below primary*, (iv) *middle*, (v) *secondary*, (vi) *higher secondary*, (vii) *diploma/certificate course*, (viii) *graduate*, and (ix) *postgraduate and above*. The criterion for deciding primary, middle, secondary, etc. levels were the same that has been followed in the concerned states/union territories. The category 'diploma or certificate course' meant diploma or certificate courses in general education, technical education or vocational education, which is below graduation level. Diploma or certificate courses in general education, technical education or vocational education, which is equivalent to graduation level, was considered under the category

'graduate'. Similarly, diploma or certificate courses in general education, technical education or vocational education, which is equivalent to post-graduation level and above were considered under the category 'post-graduate and above'.

2.9 Status of current attendance in educational institution: Particulars of current attendance in educational institution were recoded for persons of age below 30 years. It was first ascertained whether the person was currently attending any educational institutions (government or private) or not. Persons who were not currently attending any educational institutions, reason for not attending viz. (i) *school too far*, (ii) *to supplement household income*, (iii) *education not considered necessary*, (iv) *to attend domestic chores*, and (v) *others*, was recorded. For those who were currently attending any educational institutions, the course of study pursued by them was recorded in terms of 20 categories viz. (i) *EGS/NFEC/AEC*, (ii) *TLC*, (iii) *pre-primary (nursery/Kinder garten, etc.)*, (iv) *primary (class I to IV/V)*, (v) *middle*, (vi) *secondary and higher secondary*, (vii) *graduate and above in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) other subjects, (viii) diploma or certificate (below graduate level) in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects, (ix) diploma or certificate (graduate and above level) in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subject*. Persons who were registered for any regular correspondence courses or distance education courses for a stipulated period at the end of which, were allowed to appear in the examination for the course, was also considered as 'currently attending'. Persons who were awaiting results were also considered as 'currently attending'.

2.10 Economic activity: The entire spectrum of human activity falls into two categories – economic activities and non-economic activities. Any activity resulting in production of goods and services that adds value to national product was considered as an economic activity for the employment and unemployment survey of NSS 61st round. Such activities included production of all goods and services for market (i.e. for pay or profit) including those of government services, and, the production of primary commodities for own consumption and own account production of fixed assets.

2.10.1 The full spectrum of economic activities as defined in the UN system of National Accounts (1993) was not covered in the definition adopted for the NSS 61st round survey of Employment and Unemployment. Production of any good for own consumption is considered as economic activity by UN System of National Accounts but production of only primary goods for own consumption was considered as economic activity by NSSO. While the former considers activities like own account processing of primary products as economic activities, in the NSS surveys, processing of primary products for own consumption was not considered as economic activity.

2.10.2 The term 'economic activity' as defined by the employment and unemployment survey of NSS 61st round, therefore, included:

- (i) all the market activities performed for pay or profit which result in production of goods and services for exchange.
- (ii) of the non-market activities,

(a) all the activities relating to the primary sector (i.e. industry Divisions 01 to 14 of NIC-98) which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption

and

(b) the activities relating to the own-account production of fixed assets. Own account production of fixed assets includes construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labour or a supervisor.

As per the practice followed in earlier rounds, certain activities like prostitution, begging, etc., which though fetched earnings, were not considered as economic activities. Activity status of a person was judged irrespective of the situation whether such activity was carried out illegally in the form of smuggling or not.

2.11 Activity status: It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period:

- (i) working or being engaged in economic activity (work) as defined above,
- (ii) being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if the 'work' is available and
- (iii) being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and 'unemployment', respectively.

2.11.1 Identification of each individual into a unique activity status could pose a problem when more than one of the three broad activity statuses listed above were concurrently obtained for a person. In such an eventuality, the identification uniquely under any one of the three broad activity statuses was done by adopting *either the major time or priority criterion*. The former was used for classification of persons according to the 'usual activity status' approach and the latter for classification of persons according to the 'current activity status' approach. Each of the three broad activity statuses was further sub-divided into several detailed activity categories. If a person categorised as engaged in economic activity by adopting one of the two criteria mentioned above was found to be pursuing more than one economic activity during the reference period, the appropriate detailed activity status code related to that activity in which relatively more time had been spent. A similar procedure was adopted for assigning detailed activity code for persons categorised as engaged in non-economic activity and pursuing more than one non-economic activity. The detailed activity statuses under each of the three broad activity statuses (viz. employed, unemployed and not in labour force) and the corresponding codes used in the survey are given below:

<u>code</u>	<u>description</u>
working (or employed)	
11	worked (self-employed) in household enterprises as own-account worker
12	worked (self-employed) in household enterprises as an employer
21	worked (self-employed) in household enterprises as helper
31	worked as regular salaried/wage employee
41	worked as casual wage labour in public works
51	worked as casual wage labour in other types of works
61	did not work owing to sickness though there was work in household enterprise
62	did not work owing to other reasons though there was work in household enterprise
71	did not work owing to sickness but had regular salaried/wage employment
72	did not work owing to other reasons but had regular salaried/wage employment
not working but seeking/available for work (or une employed)	
81	sought work or did not seek but was available for work (for usual status approach)
81	sought work (for current weekly status approach)
82	did not seek but was available for work (for current weekly status approach)
neither working nor available for work (or not in labour force)	
91	attended educational institutions
92	attended to domestic duties only
93	attended to domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use
94	rentiers, pensioners, remittance recipients, etc.
95	not able to work owing to disability
97	others (including beggars, prostitutes, etc.)
98	did not work owing to sickness (for casual workers only)
99	children of age 0-4 years

It may be noted that codes 61, 62, 71, 72, 82 and 98 were applicable for current weekly status and current daily status approaches only.

2.12 **Workers (or employed)**: Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers. Relevant activity status codes within 11 to 72 were assigned for workers. Workers were further categorized as *self-employed* (relevant activity status codes: 11, 12, 21, 61, 62), *regular salaried/wage employee* (relevant activity status codes: 31, 71, 72), and *casual wage labour* (relevant activity status codes: 41 and 51).

2.13 **Seeking or available for work (or unemployed):** Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' (or unemployed). Activity status codes 81 or 82 were assigned for unemployed.

2.14 **Labour force:** Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons with activity status codes 11 – 82 constituted the labour force.

2.15 **Not in labour force:** Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'not in labour force'. Persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young persons, prostitutes, etc. and casual labourers not working due to sickness. Activity status codes 91-95, 97 and 98 were assigned for persons belonging to category 'not in labour force'.

2.16 **Self-employed:** Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (i.e., how, where and when to produce) and *economic independence* (i.e., market, scale of operation and money) for carrying out their operation. The remuneration of the self-employed is often described as mixed-income because it consists of a non-separable combination of two parts: a reward for their labour and profit of their enterprise. The combined remuneration is wholly determined by the sales of output produced by self-employed persons.

2.16.1 **Categories of self-employed persons:** Self-employed persons were categorised as follows:

- (i) **own-account workers:** those self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise;
- (ii) **employers:** those self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour; and
- (iii) **helpers in household enterprise:** those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related person living in the same household in running the household enterprise.

2.17 **Regular salaried/wage employee:** These were persons who worked in others' farm or non-farm enterprises (both household and non-household) and, in return, received salary or

wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

2.18 *Casual wage labour*: A person who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labour.

2.19 *Different approaches followed to determine activity status*: The persons surveyed were classified into various activity categories on the basis of the activities pursued by them during certain specified reference periods. There were three reference periods for this survey. These are: (i) one year (ii) one week and (iii) each day of the reference week. Based on these three periods, three different measures of activity status are arrived at. These are termed respectively as *usual status*, *current weekly status* and *current daily status*. The procedure adopted to arrive at these three measures is given below.

2.19.1 *Usual principal activity status*: The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively longer time (i.e. major time criterion) during the 365 days preceding the date of survey is considered as the *usual principal activity status* of the person. To decide the usual principal activity of a person, first a two stage dichotomous classification was followed for determining the broad usual principal activity status of the person viz. (i) employed, (ii) unemployed, and (iii) not in labour force. Persons were first categorised as those in the *labour force* and those *not in the labour force* depending on the major time spent during the 365 days preceding the date of survey. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work' (*not in the labour force*). For persons belonging to the labour force, the broad activity status of either 'working' (*employed*) or 'not working but seeking and/or available for work' (*unemployed*) was ascertained based on the same criterion viz. relatively longer time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively longer time spent on such activities. In terms of activity status codes (stated earlier in para 2.11.1), codes 11-51 were applicable for persons classified as workers and codes 91-97 for those who were not in the labour force. In the usual status approach, a single code 81 was assigned for persons seeking or available for work (unemployed persons) while two separate codes 81(sought work) and 82 (did not seek but was available for work) were assigned for unemployed persons according to current weekly status and current daily status approach.

2.19.2 *Usual subsidiary economic activity status*: A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Activity status codes 11-51 only were applicable for the subsidiary

economic activity performed by a person. It may be noted that engagement in work in subsidiary capacity may arise out of the two following situations:

- (i) a person may be engaged in a relatively longer period during the 365 days in economic (non-economic activity) and for a relatively minor period, which is not less than 30 days (not necessarily for a continuous period), in another economic activity (any economic activity). The economic activity, which was pursued for a relatively minor period, was considered as his/her subsidiary economic activity.
- (ii) a person may be pursuing an economic activity (non-economic activity) almost throughout the year in the principal status and also simultaneously pursuing another economic activity (any economic activity) for a relatively shorter time in a subsidiary capacity. The economic activity, which was pursued for a relatively shorter time, was considered as his/her subsidiary economic activity.

2.19.3 Usual activity status considering principal and subsidiary status taken together: The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey. In this report, the estimates of the employment and unemployment indicators have been presented for the usual status (ps+ss) only.

2.19.4 Current weekly activity status: The current weekly activity status of a person is the activity status obtaining for a person during a reference period of 7 days preceding the date of survey. It is decided *on the basis of a certain priority cum major time criterion*.

2.19.4.1 According to the *priority criterion*, the status of 'working' gets priority over the status of 'not working but seeking or available for work' that, in turn, gets priority over the status of 'neither working nor available for work'. A person was considered working (or employed) if he/she, while pursuing any economic activity, had worked for at least one hour on at least one day during the 7 days preceding the date of survey. A person was considered 'seeking or available for work (or unemployed)' if, during the reference week, no economic activity was pursued by the person but he/she made efforts to get work or had been available for work any time during the reference week though not actively seeking work in the belief that no work was available. A person who had neither worked nor was available for work any time during the reference week was considered as engaged in non-economic activities (or not in labour force).

2.19.4.2 After deciding the *broad current weekly activity status* of a person on the *basis of 'priority' criterion*, the *detailed current activity status* was then decided *on the basis of 'major time' criterion if that person pursued multiple economic activities*. The current weekly activity status of a person could be any one of the detailed activity status (ref. para 2.14.1) and

could have any of the valid codes within 11 to 98. Of these codes, 11 to 72 pertained to workers, 81 to 82 for unemployed and 91 to 98 for persons not in the labour force.

2.19.5 Current daily activity status The activity pattern of the population, particularly in the informal sector, is such that during a week, and sometimes, even during a day, a person could pursue more than one activity. Moreover, many people could even undertake both economic and non-economic activities on the same day of a reference week. The current daily activity status for a person was determined on the basis of his/her activity status on each day of the reference week *using a priority-cum-major time criterion* (day to day labour time disposition). Time disposition was recorded for every member of the sample households. This involved recording of different activities pursued by the members along with the time intensity in quantitative terms for each day of the reference week. The different activities were identified and recorded in terms of 'activity status' and 'industry' codes for persons in urban areas and 'activity status', 'industry' and 'operation' codes for persons in rural areas. The description (and codes used) of current daily activity statuses is the same as those of current weekly activity status. The following points were considered for assigning the time intensity and determining the current daily status of a person:

- i) Each day of the reference week was looked upon as comprising either two 'half days' or a 'full day' for assigning the activity status. For recording time disposition for activities pursued by a person in a day, an intensity of 1.0 was given against an activity that was done for 'full day' and an intensity of 0.5 against the activity which was done for 'half day'.
- ii) A person was considered 'working' (employed) for the full day if he/she had worked for 4 hours or more during the day.
- iii) If a person was engaged in more than one of the economic activities for 4 hours or more on a day, he/she was assigned two out of the various economic activities in which he/she devoted relatively longer time on the reference day. In such cases, an intensity of 0.5 was given for each of these two economic activities.
- iv) If the person had worked for 1 hour or more but less than 4 hours, he/she was considered 'working' (employed) for half-day and 'seeking or available for work' (unemployed) or 'neither seeking nor available for work' (not in labour force) for the other half of the day depending on whether he was seeking/available for work or not.
- v) If a person was not engaged in any 'work' even for 1 hour on a day but was seeking/available for work for 4 hours or more, he was considered 'unemployed' for the entire day. But if he was 'seeking/available for work' for more than 1 hour and less than 4 hours only, he was considered 'unemployed' for half day and 'not in labour force' for the other half of the day.
- vi) A person who neither had any 'work' to do nor was available for 'work' even for half a day was considered 'not in labour force' for the entire day and was assigned one or two

of the detailed non-economic activity statuses depending upon the activities pursued during the reference day.

2.19.6 In the quinquennial surveys, the current weekly status of a person is derived from the intensities assigned for the daily activities performed by a person during the 7 days of the reference week.

2.20 **Industry and occupation of the work activity:** For the employed persons, to record the industry of work, 5-digit classification of NIC-1998 was used and to record the type of occupation, 3-digit classification of NCO-1968 was used. In case two or more industry-occupation combinations corresponding to the status code were reported by a person, the industry-occupation was taken as the one in which *relatively more time* was spent during the reference period by the person. To identify certain category of workers under Division 95 (Private households with employed persons) of NIC 1998, six additional codes were used in the survey viz., housemaid /servant (95001), cook (95002), gardener (95003), gatekeeper/chowkidar/watchman (95004), governess/baby-sitter (95005) and 'others' (95009). This apart, separate industry codes were used for recording the activities of letting of building for residential purposes (70104) and letting of building for non-residential purposes (70105).

2.21 **Manual work:** A job essentially involving physical labour was considered as manual work. However, jobs essentially involving physical labour but also requiring a certain level of general, professional, scientific or technical education were not termed as 'manual work'. On the other hand, jobs not involving much of physical labour and at the same time not requiring much educational (general, scientific, technical or otherwise) background were treated as 'manual work'. Thus, engineers, doctors, dentists, midwives, etc., were not considered manual workers even though their jobs involved some amount of physical labour. But, peons, chowkidars, watchman, etc. were considered manual workers even though their work might not involve much physical labour. Manual work was defined as work pursued in one or more of the following occupational groups of the National Classification of Occupations (NCO 1968):

Division 5 (Service workers):

Group 52: cooks, waiters, bartenders and related workers (domestic and institutional).

Group 53: maid and other housekeeping service workers (not elsewhere classified).

Group 54: building caretakers, sweepers, cleaners and related workers.

Group 55: Launderers, dry cleaners and pressers.

Group 56: hair dressers, barbers, beauticians and related workers.

Family 570: fire fighters

Family 574: watchmen, gate-keepers

Family 579: protective service workers not elsewhere classified.

Division 6 (Farmers, Fishermen, Hunters, Loggers and related workers):

Group 63: agricultural labourers

Group 64: plantation labourers and related workers

Group 65: other farm workers

Group 66: forestry workers

Group 67: hunters and related workers

Group 68: fishermen and related workers.

Division 7-8-9 (Production and related workers, transport equipment operators and labourers):

All groups excluding group 85 (electrical fitters and related workers) and group 86 (broadcasting station and sound equipment operators and cinema projectionists).

2.22 Rural labour: Manual labour working in agricultural and /or non-agricultural occupations *in return for wages* paid either in cash or in kind (excluding exchange labour), either of casual or regular basis, and *living in rural areas*, was taken as rural labour.

2.23 Wage paid-manual labour: A person who did manual work in return for wages in cash or kind or partly in cash and partly in kind (excluding exchange labour) was considered as a wage paid manual labour. Salaries were also counted as wages. A person who was self-employed in manual work was *not treated* as a wage paid manual labour.

2.24 Agricultural labour: A person was considered as engaged as agricultural labour, if he/she followed one or more of the following agricultural occupations in the capacity of a wage paid manual labour, whether paid in cash or kind or both:

- (i) farming,
- (ii) dairy farming,
- (iii) production of any horticultural commodity,
- (iv) raising of livestock, bees or poultry,
- (v) any practice performed on a farm as incidental to or in conjunction with farm operations (including forestry and timbering) and the preparation for market and delivery to storage or to market or to carriage for transportation to market of farm produce.

Working in fisheries was *excluded* from agricultural labour. Further, 'carriage for transportation' referred *only to the first stage of the transport* from farm to the first place of disposal.

2.25 Procedure followed for collecting employment and unemployment particulars in different NSS rounds: In the annual rounds, only activity status and industry of work according to usual principal status, subsidiary status and current weekly status approach are collected through a few columns of the demographic block of the Consumer Expenditure Schedule (Schedule 1.0). Particulars of employment and unemployment according to the usual principal status and usual subsidiary status were collected in the annual rounds by following a similar approach as in the quinquennial rounds. In the quinquennial rounds, particulars of current daily status of the household members are collected and current weekly status is derived from them, whereas in the annual rounds, current weekly status has been obtained through a direct query. In the 60th round, a separate schedule on employment and unemployment was canvassed for the first time in an annual round and particulars on employment and unemployment was collected in the same manner as that of the quinquennial rounds.

Chapter Three

Summary of Findings

3.1 Introduction

3.1.1 *General*: As stated earlier, this report primarily deals with the employment and unemployment situation during 2004-05 among persons belonging to the four social groups, viz. *scheduled tribe* (ST), *scheduled caste* (SC), *other backward class* (OBC) and the rest referred to as *others*. However, before studying their employment - unemployment situation, some broad indicators pertaining to household and population characteristics of the different social groups are discussed first. As such, the variation by social group in the level or pattern of a few household or population characteristics like (i) distribution of households by *household type* (i.e. nature or type of work from which the household derived maximum income during the 365 days preceding the date of survey), (ii) distribution of households by land possessed or land cultivated, (iii) distribution of persons by monthly per capita consumer expenditure (MPCE), etc. are taken up for discussion in the next section. The main findings with respect to the indicators of employment and unemployment are then presented in Sections 3, 4 and 5 of this chapter.

3.1.2 *Use of estimated aggregates*: Compared to the census population or the projections thereof, population estimates from the NSSO surveys are, in general, on the lower side. This difference arises mainly due to the differences in coverage and methods adopted in NSS in comparison with the census operation. However, the ratios obtained from the survey are expected to be robust. This is why the estimates on employment- unemployment are presented as ratios. To estimate an absolute number in any category, it is advisable to apply the survey estimates of ratios to the census population or projections thereof, for that category. The estimates of aggregates given in the detailed tables in the Appendix A may help to combine the ratios but may not be used for deriving estimates of absolute numbers for a characteristic. It may also be noted that as the tables are generally presented as per thousand distributions, the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the accuracy of these derived aggregates will be limited to the number of significant digits available in the ratio or percentage estimates presented in the report. The estimated aggregates, wherever possible, can be used to get ratios with more significant digits.

3.1.3 *Reference period of the estimates*: The estimates presented in the report, in general, refer to the mid point of the survey period (July 2004 – June 2005) of NSS 61st round i.e. 01.01.05. The estimates for 'land cultivated' have the reference period of the agricultural year 2003-04 i.e. July 2003 – June 2004. It may be noted that the estimates of aggregates given in the detailed tables help only to combine ratios. To arrive at the absolute number in any category, the survey estimates of ratios are to be applied to the projected populations as on 01.01.2005, the mid-point of the 61st round survey period (July 2004 - June 2005).

3.1.4 It may be mentioned that discussions are mainly centered on the all-India estimates. A comparison with the results of 55th round (July 1999 – June 2000) is also made in some cases at the all-India level. While all-India summary results are presented along with the write-up, the

corresponding results at the state/union territory level are given at the end of this chapter. The detailed tables showing the survey results at the all-India level are given in Appendix A.

3.1.5 It may be noted that the scope of the survey being all households without special focus on social groups, sample design was not tailored to netting in special social groups like Scheduled Caste (SC) and Scheduled Tribe (ST) households, etc. Since ST households are concentrated in a few states and SC households are geographically dispersed, the reliability of state level results is critically dependent on the sample size of the households of the different social groups which happened to be netted in a general-purpose representative sample of households. It may be noted that the number of sample households for a particular social group of a state/union territory may not be adequate enough in providing sufficiently reliable estimates of the various indicators and therefore, the estimates for the different social groups for the states/union territories are to be used after taking due account of the sample number of households for different social groups of the states/union territories. This caution is sounded upfront for the interpretation of state level results for social groups.

3.2 Households and Population

3.2.1 Number of Households Surveyed by Social Group

3.2.1.1 In order to form a judgment about the reliability of estimates pertaining to various social groups at the state/union territory level, one may like to have an idea of the respective sample sizes based on which the survey results/estimates have been obtained. Statement 3.1 (placed at the end of this chapter) gives the number of households surveyed in the 61st round by social group for different states/union territories and at the all-India level with rural-urban break-up. The statement shows that there are good numbers of states/union territories where the number of surveyed households for some social groups are rather low. The estimates for the concerned social groups in those states/union territories are to be used with due caution.

3.2.1.2 The total number of households surveyed at the all-India level was 1,24,680 (79,306 in rural areas and 45,374 in urban areas). The number of sample households for the social groups *scheduled tribe* (ST), *scheduled caste* (SC), *other backward class* (OBC) and *others* were 12694, 13929, 30116, 22502 respectively, in the rural areas and 3509, 6355, 16232, 19257 respectively, in the urban areas.

3.2.2 Distribution of Households

3.2.2.1 *Distribution of households by social group*: As per the 61st round (July 2004 - June 2005) survey estimates, about 73 per cent of the 207 million households of India belonged to rural areas. Statement 3.2 gives per 1000 distribution of households of India by social group separately for the rural and urban areas. Similar distribution for different states/union territories is given in Statement 3.2.1. Statement 3.2 shows that during 2004-05, nearly 9 per cent of the households in the country

belonged to *scheduled tribes* (ST) and about 20 per cent belonged to *scheduled castes* (SC)¹. About 40 per cent of the households belonged to the *other backward class* (OBC) category. Between the rural and urban areas, a significant difference is observed in the distributions of

Statement 3.2: Per 1000 distribution of households among different social groups in NSS 55th (1999 -2000) and 61st (2004 - 2005) rounds all-India

social group	rural		urban		rural + urban	
	55 th	61 st	55 th	61 st	55 th	61 st
(1)	(2)	(3)	(4)	(5)	(6)	(7)
ST	110	107	41	31	91	86
SC	221	217	142	146	200	197
OBC	369	420	311	355	353	402
others	299	256	507	468	356	314
all (incl. n.r.)	1000	1000	1000	1000	1000	1000

households over social groups. The corresponding proportions of households, in the rural areas, were 11 per cent, 22 per cent and 42 per cent, respectively, and in the urban areas, only about 3 per cent, 15 per cent and 36 per cent, respectively. The Statement 3.2.1 show that within a state/union territory, proportions of ST or SC or OBC population were generally higher in the rural areas as compared to those in

the urban areas. The statement also reveals that among different states /union territories, the relative proportions of the different social groups in their population were highly variable.

3.2.2.2 Changes over time: The distribution of households by social group, obtained from the 55th round (1999-2000) survey, is also presented in Statement 3.2. While the proportion of households for the SCs and STs, in India, has remained at the same level as that of during the period 1999-2000 to 2004-05, the proportion of OBC households had increased by 5 percentage points during this period. This growth is observed in the case of both the rural and urban areas.

3.2.3 Distribution of Population and Household Size

3.2.3.1 Distribution of persons by social group: As per the 61st round survey (July 2004 - June 2005) estimates, about 75 per cent of the 972 million population of India stayed in the rural areas. Distribution of persons by social group at the all-India level is presented in Statement 3.3, separately for males and females in the rural and urban areas. The distributions of persons by social group for different states/union territories are given in Statement 3.3.1. A similar pattern as for the households is revealed in the distribution of person over the social groups in the rural and urban areas of all-India and states. The proportions of persons belonging to the categories ST, SC and OBC were about 8 per cent, 20 per cent and 41 per cent at the all-India

¹ NSS estimates of proportion of ST or SC households/population are not strictly comparable with the corresponding figures available from Population Census due to the differences in definitions adopted. The NSSO classifies a household (and accordingly all persons within a household) as ST or SC if the informant reports the head of the household to be so. On the other hand, in the Population Census, a person enumerated are classified as belonging to ST or SC if he or she is covered in the list of STs/SCs furnished to the enumerator with respect to his/her state/union territory. The divergence of the NSS estimates of ST/SC households or population from the Census figures may also partially be due to the limitation of the sample size to which the NSS estimates are subjected to.

level. The corresponding proportions were 10 per cent, 21 per cent and 43 per cent, respectively in

Statement 3.3: Per 1000 distribution of persons among different social groups in NSS 55th (1999 -2000) and 61st (2004 - 2005) rounds

Statement 3.4: Household size and sex ratio among different social groups

social group	all-India					
	household size			sex ratio		
	rural	urban	rural+urban	rural	urban	rural+urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
ST	4.6	4.3	4.6	956	995	959
SC	4.7	4.5	4.7	965	909	954
OBC	4.9	4.4	4.8	965	917	954
others	4.8	4.3	4.6	957	921	943
all (incl. n.r.)	4.8	4.3	4.7	962	920	951

OBCs in the urban areas. This provides the reason why the shares of ST and SC in the total population, in the rural areas, were a little lower than their corresponding shares in total number of households. On the other hand, household size for the OBCs being highest in the rural areas, their share in total population was a little higher than their corresponding shares in total number of households. The over all sex ratio among the STs is found to be higher than that among other social groups, and much higher in the urban areas. While the over all sex ratio was 951 females per 1000 males, it was 959 among STs, 954 for both the STs and OBCs, and lowest among *others*. In the urban areas, the corresponding ratio was 995, 909, 917 and 921.

3.2.4 Distribution of Households by Household Type

NSS Report No. 516: Employment and unemployment situation among social groups in India, 2004-05

the rural areas and about 3 per cent, 15 per cent and 36 per cent, respectively in the urban areas. The differences in the two sets of distributions given in Statements 3.2 and 3.3 may be attributed to the differences in the household size across the social groups.

3.2.3.2 Average household size and sex ratio over social groups:

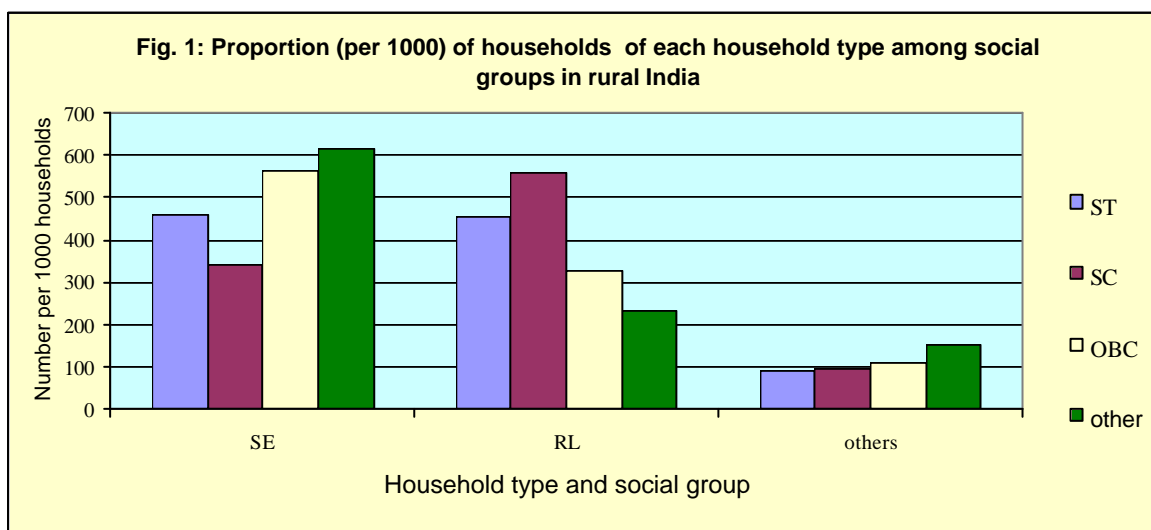

The average household size and sex ratio is given in Statement 3.4 separately for each social group at the all-India level. It may be noted that the household size is found to be the lowest among the STs (4.6) in the rural areas, and among both the STs and *others* (4.3 each) in the urban areas. In respect of household size, the STs were closely succeeded by the SCs in the rural areas and by

3.2.4.1 Each surveyed household was categorised into an appropriate 'household type' according to major source of household income during the previous year. Household types distinguished were 5 in the rural and 4 in the urban areas (see Para 2.4 of Chapter Two). The distribution of households of each social group by household type has been presented in statements 3.5 and 3.6 for rural and urban areas separately. The corresponding results for various states/union territories are given in Statements 3.5.1 and 3.6.1.

Statement 3.5: Per thousand distribution of households of different social groups by household type

social group	rural								
	household type							residual other hhs. (others)	all (incl. n.r.)
	self employed (SE) in:			rural labour (RL)					
agriculture	non-agriculture	sub-total	agricultural labour	other labour	sub-total				
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	
ST	393	64	457	340	113	453	89	1000	
SC	202	141	342	405	154	560	98	1000	
OBC	387	176	562	224	104	327	110	1000	
others	433	181	614	156	77	233	153	1000	
all (incl. n.r.)	359	158	517	258	109	367	116	1000	

3.2.4.2 *In rural areas:* Statement 3.5 shows that in rural India, proportion of households depending on self-employment (SE) was highest among others category of households (61 per cent) followed by OBC households (56 per cent), ST (46 per cent) and SC (34 per cent) households. On the other hand, proportion of rural labour (RL) households was much higher among ST (45 per cent) and SC (about 56 per cent) households than that among the OBC households (33 per cent) and others households (23 per cent). In Figure 1, the proportion of households for each household type, for rural areas, among the different social groups in India is presented.

3.2.4.3 *In urban areas:* In urban India too, proportion of households depending on *self-employment* (SE) was higher among OBC households (40 per cent) and *others* category households (39 per cent) as compared to that among the ST (26 per cent) or SC (29 per cent)

Statement 3.6: Per thousand distribution of households of different social groups by household type

social group	household type				all (incl. n.r.)
	self employed (SE)	regular wages/ salaried (RWS)	casual labour (CL)	residual other hhs. (others)	
(1)	(2)	(3)	(4)	(5)	(6)
ST	263	418	173	145	1000
SC	294	411	218	77	1000
OBC	403	367	145	84	1000
others	386	448	62	103	1000
all (incl. n.r.)	375	413	118	94	1000

households. Proportion of households depending on *regular wage / salaried* (RWS) employment was almost the same for the ST (42 per cent) and SC (41 per cent) households. This proportion among OBC households was much lower (37 per cent) as compared to that among *others* households (45 per cent). Proportion of urban

households depending on *casual labour* (CL) was higher among the SC and ST (22 per cent and 17 per cent, respectively) households than among OBC households (15 per cent) or *others* households (6 per cent). In Figure 2, the proportion of households for each household type, for urban areas, among the different social groups in India is presented.

3.2.5 Distribution of Households by Size Class of Land Possessed

3.2.5.1 Land possessed by a household serves as a good indicator of the economic status of the household, at least in the rural areas. To examine the variation in this respect among different social groups in rural India, the distribution of households by the size class of land

possessed, as obtained from the survey, are presented for different social groups in Statement 3.7. The distribution of households by size class of land possessed for various social groups is shown in Statement 3.7.1 for the rural areas of each state/union territory.

3.2.5.2 Land possessed by different social groups: Statement 3.7 shows that in rural India, among

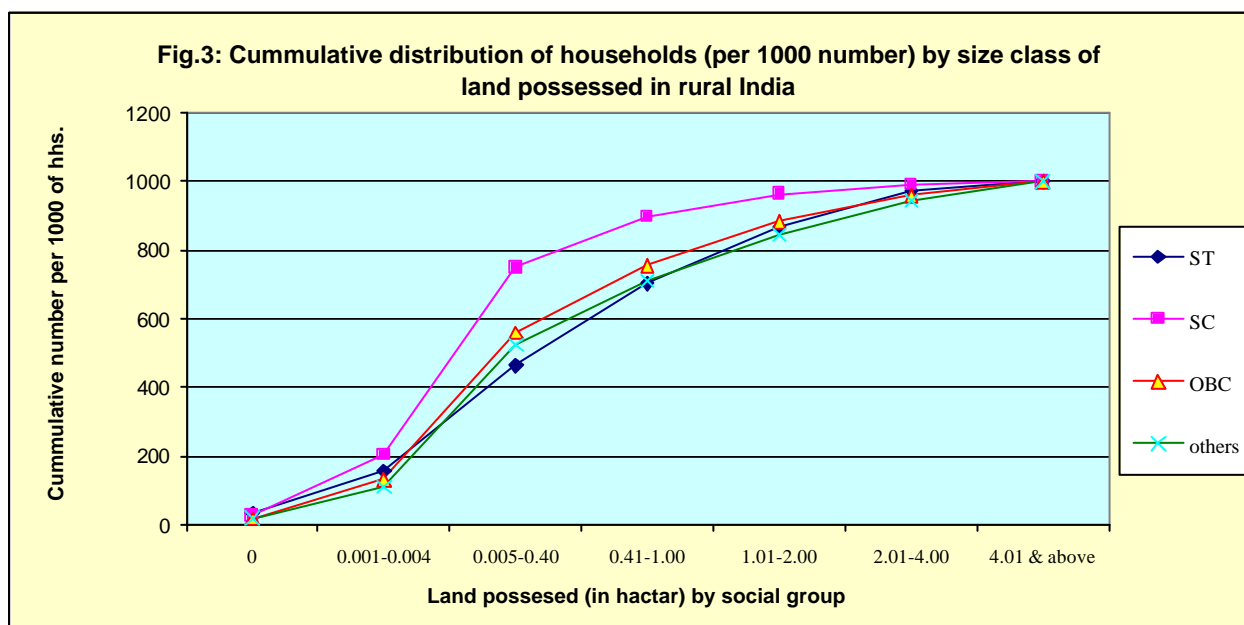

Statement 3.7: Per 1000 distribution of households of different social groups by size class of land possessed

all-India size class of land possessed (hectares)	ST	SC	OBC	Other s	rural all (incl. n.r.)
(1)	(2)	(3)	(4)	(5)	(6)
0.000	36	27	16	20	22
0.001-0.004	120	176	115	90	123
0.005-0.40	308	546	429	415	438
0.41-1.00	239	147	195	185	187
1.01-2.00	163	67	128	134	120
2.01-4.00	106	27	76	99	75
4.01 & above	29	10	40	57	36
all	1000	1000	1000	1000	1000

Note: The households with size class of land possessed '0.000' hectares comprise households which possessed land less than 0.001 hectares as well as households which reported no information on land possessed.

the social groups, the proportion of households possessing land less than 0.001 hectares, during 2004-05, was the highest for ST households (nearly 4 per cent). The corresponding proportion for SC households was about 3 per cent and for OBC and others category of households around 2 per cent each. The survey results also show that the proportion of households possessing land of size 4.01 hectares or more was maximum for other category of households (6 per cent), followed by the OBC (4 per cent), ST (about 3 per cent) and SC households (1 per cent). In Figure 3,

the cumulative distribution of households (per 1000 number) by size class of land possessed in rural India is presented.

3.2.6 Distribution of Households by Size Class of Land Cultivated

3.2.6.1 *Land cultivated by different social groups:* Information on land cultivated by the households during the agricultural year (AY) 2003-04, i.e., July 2003 to June 2004 was also collected through Schedule 10 of NSS 61st round. The distribution of rural households in India by size class of land cultivated is given in Statement 3.8. The corresponding distribution for different states/union territories is given in Statement 3.8.1. The statement shows that during the agricultural year 2003-04, about 43 per cent of the rural households cultivated land less than 0.001 hectare. The corresponding proportions for SC, OBC, *others* and ST category of households were 57 per cent, 41 per cent, 38 per cent and 34 per cent, respectively. The proportion of households cultivating larger holdings of size 4.01 hectares and above was the highest among *other* category of households (about 5 per cent), followed by OBCs (about 3 per cent). Between the ST and SC categories of households, the proportion of households operating such large holdings was a little higher among the households belonging to the STs (2 per cent) than among those belonging to the SCs (1 per cent).

all-India size class of land cultivated (hectares)	rural				all (incl. n.r.)
	ST	SC	OBC	Others	
(1)	(2)	(3)	(4)	(5)	(6)
0.000	336	574	407	377	428
0.001-0.004	3	4	3	2	3
0.005-0.40	172	204	188	190	190
0.41-1.00	225	130	180	168	171
1.01-2.00	154	58	120	130	113

4.01 & above	21	7	32	49	30
all	1000	1000	1000	1000	1000

Note: The households with size class of land cultivated '0.000' hectares comprise households which cultivated land less than 0.001 hectares as well as households which reported no information on land cultivated.

3.2.7 Distribution of Persons by Household Monthly Per Capita Consumer Expenditure (MPCE) Class

3.2.7.1 Household monthly consumer expenditure could serve as a proxy for household monthly income and is taken to reflect the standard of living of the members of a household. In the present survey on employment and unemployment, data on consumption expenditure was collected through a separate work sheet. The work-sheet is an abridged version of the detailed schedule used for consumption items in the parallel full-fledged consumer expenditure survey. The abridged work-sheet that was used to reduce the respondent fatigue is known to understate the level of consumer expenditure in comparison with the detailed schedule. Based on the abridged work-sheet, monthly per capita consumer expenditure was worked out for each sample household, which is expected to serve as a close proxy for income. It may be noted that the class limits for the MPCE class-intervals given in the statements and appendix tables of this report are based on the data collected in detailed Schedule 1.0 (Household Consumer Expenditure) in this round. The class limits of MPCE classes were determined, separately for the rural and urban sectors of all-India, in such a manner that each of the first two and last two classes contained around 5% of the population and each of the remaining

classes contained around 10%. Having the MPCE class-intervals so determined, the distribution of persons by household MPCE class-intervals has been obtained for each of the four social groups based on the data on household consumer expenditure collected through the abridged work sheet. The distribution has been presented in Statement 3.9 for all-India and in Statement 3.9.1 for different states/union territories. The variations in the pattern of household MPCE among the social groups are examined separately for the rural and urban areas.

3.2.7.2 *In rural areas:* It may be seen from Statement 3.9 that in rural India, proportion of households in each of the five lower MPCE classes (i.e., less than Rs. 410) was higher among the STs (49 per cent), SCs (40 per cent) and OBCs (30 per cent) than among the *others* (20 per cent) social group. Between STs and SCs, proportions of households in the lowest two MPCE classes were higher among STs (15 per cent) than among the SCs (8 per cent), and these households spent only Rs. 270 or less per month. The proportion of households in the highest MPCE class (i.e. those who spent Rs. 1155 or more per month) was higher among *others* category of households (12 per cent) than among the OBCs (5 per cent), SCs (3 per cent) or STs (2 per cent).

Statement 3.9: Per 1000 distribution of households by household monthly per-capita consumer expenditure class for each social group

all-India											
rural						Urban

all classes	1000	1000	1000	1000	1000	all classes	1000	1000	1000	1000	1000

3.2.7.3 *In urban areas:* Statement 3.9 shows that in urban India too, proportion of households in each of the five lower MPCE classes (i.e. less than Rs. 675) was higher among SCs, STs and OBCs than among the *others* category of households. About 51 per cent of the SCs of urban India spent less than Rs.675 per month during 2004-05; the corresponding percentages being 43, 40 and 21 for the STs, OBCs and the *others*, respectively. The proportion of households in the lowest MPCE

class (i.e. those spending less than Rs. 335 per month) was higher among the STs (8 per cent) than that among SCs (7 per cent). The proportion of urban households spending Rs.2540 or more per month was higher among *others* (13 per cent) category of households than among the OBCs or STs (3 per cent each) or SCs (1 per cent).

3.2.8 Proportion of Households with no Literate Adult Member / no Literate Adult Female Member

3.2.8.1 The activity pattern of the members of a household is likely to be related with their level of literacy. Statement 3.10 gives the proportions of households having no literate adult (age 15 yrs. and above) member and no literate adult female member (age 15 yrs. and above) for different social groups of households at the all-India level, separately for rural and urban areas. In the survey, a person was considered as literate if he could read and write a simple sentence in any language with understanding. The statement reveals that the proportion of households without any literate adult member or without any literate adult female member was much higher among households belonging to the STs and SCs as compared to the OBC or *others* category households in both rural and urban

Statement 3.10: Proportion (per 1000) of households with no literate adult (15 years and above) member/ adult female member

social group	all-India					
	rural		urban		rural + urban

all (incl. n.r.)	261	500	84	195	212	417

India. Between the two scheduled categories, the proportion of such households was higher among the STs in rural India and among the SCs in urban India. Between OBC and *others* category of households, the proportion of such households was higher among the OBCs in both rural and urban India. Statement 3.10.1 gives the proportions of households having no literate adult (age 15 yrs. and above) member and no literate adult female member (age 15 yrs. and above) for different social groups of households at the state/union territory level.

3.2.9 Households with at least One Male Member/ Female Member Got Work in Public Works

3.2.9.1 Public works, for the purpose of survey, was defined as those activities which were sponsored by Government or Local bodies and which covered local area development works like

construction of roads, dams, bunds, digging of ponds etc. as relief measures, or as an outcome of the

Statement 3.11: Proportion (per 1000) of households where at least one male member/ female member got work in public works for at least 60 days during last 365 days

all (incl. n.r.)	17	8	5	1	

employment generation schemes under the poverty alleviation programmes. In the survey, information on the number of male and female members of the household who got work in public works for at least 60 days during the last 365 days preceding the date of survey was collected. The information so obtained has been presented in Statement 3.11 in terms of

proportion (per 1000) of households reporting at least one male member/ female member got work in public works for at least 60 days during last 365 days. The incidence of getting public works for at least for 60 days, either by a male member of the household or by a female member of the household, is near nil in the urban areas. In the rural areas, for every 1000 households, about 17 households reported that at least one male member had got the work in public works, whereas only 8 households reported that at least one female member had got the work in public works for at least 60 days. Among the social groups, the incidence is found to be highest for the STs, followed by the SCs and OBCs. The proportion of households (per 1000) with no literate adult (15+) member/ female member in the household by social group is presented in Figure 4.

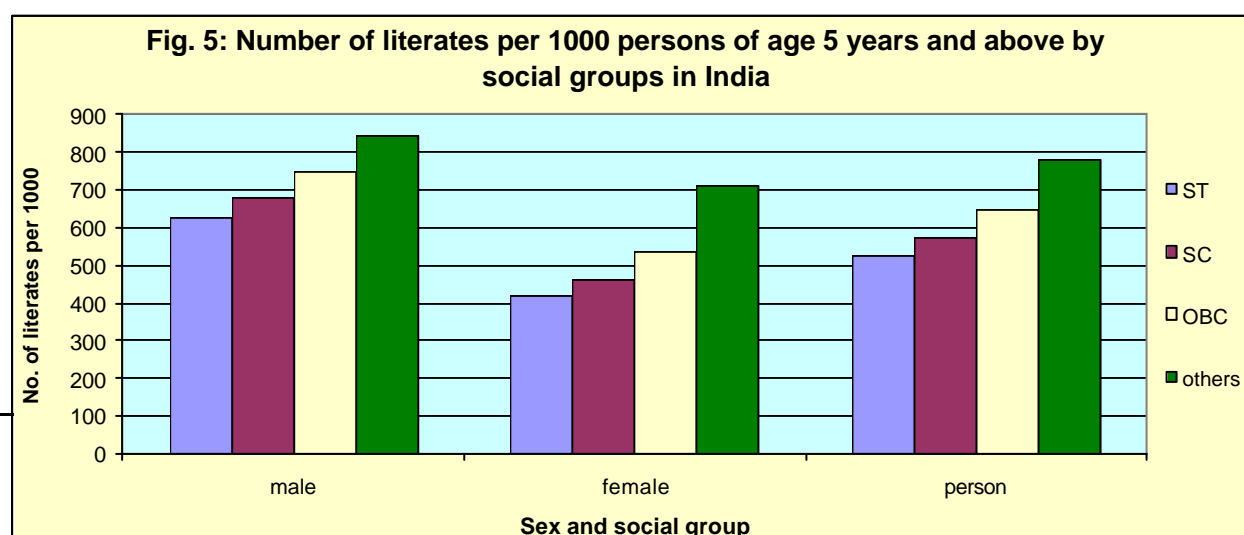

3.2.10 Literacy Rate among Persons of Age 5 Years and Above

3.2.10.1 The educational level attained by a person is expected to be associated with his or her employment prospects. At the all-India level, Statement 3.12 presents the literacy rate at the all-India level among persons of age 5 years and above belonging to the different social groups. Similar results for each state/union territory are given in Statement 3.12.1. Number of literates per 1000 persons of age 5 years and above by social groups in India is presented in Figure 5. It is seen that during 2004-05, about 66 per cent of the people (5 years and above) in the country were literate, that is, they could read and write a simple sentence in any language with understanding. In other words, in 2004-05, about 34 out of every 100 people in the country were unable to read or write a simple message with understanding. The literacy rate is found to be the highest among the *others* (78 per cent) category of people, followed by the OBCs with a gap of nearly 14 percentage points, and the lowest among the STs (52 per cent). As observed generally in the over all population, the similar rural-urban and male-female differences in the literacy rate also feature among all the social groups. The literacy rates among the females and that too in the rural areas are found to be the lowest among all the categories.

Statement 3.12: Literacy rate among persons of age 5 years and above for different social groups

3.2.11 Distribution of Persons of Age 15 Years and Above by Educational Level

3.2.11.1 The distribution of persons of age 15 years and above by level of general education is given in Statement 3.13 separately for each of the four social groups. Similar results are also given in Statement 3.13.1 for the state/union territory.

3.2.11.2 Statement 3.13 reveals that the proportion of illiterates among the persons of age 15 years and above is, in general, higher than among the persons of age 5 years and above. This indicates that over the generations, more and more people are becoming literate. The relative positions of various social groups in respect of literacy rates are found to be the same as for the people of age 5 years and above. The proportion of persons reporting their educational level as *graduate and above* was higher among the *others* category than among any other categories of persons for both males and females or in rural and urban India. Among the scheduled categories, in urban India, proportion of persons reporting their educational level *graduate and above* was higher among the STs (9 per cent) than that among the SCs or OBCs. On the other hand, in the rural areas, the said proportion was almost the same among the females of SCs, STs and OBCs (about 1 per cent) whereas among the males, the proportion was a little higher for the OBCs (3 per cent) than that for the STs or SCs (2 per cent each).

3.2.12 Current Attendance Rates in Educational Institutions

3.2.12.1 Current attendance rate in educational institutions among the children and the youth is supposed to be one of the important social indicators for assessing the status of progress of any particular group of people under study. Current attendance rate in educational institutions for different social group and age group has been defined as the number of persons currently attending in educational institutions per 1000 persons of the respective social group and age group. Statement 3.14 presents the current attendance rates in educational institutions among the children in the age-group 5-14 years and for the youth in the age groups 15-19 and 20-24 years for different social groups at the all-India level. The same results obtained from the 55th round (1999-2000) survey are also presented in this statement. The statement shows that compared to the households belonging to the scheduled categories, the current attendance rate in educational institutions was much higher among the children and the youth belonging to the *others* category of households, except among the urban male youth of age 20-24 years for which the rate was highest among the STs (32 per cent), followed by the *others* (28 per cent). In rural India, the current attendance rate among the OBCs was higher than that among the STs and SCs. Between the ST and SC population of rural India, current attendance rates for both males and females, excepting the age group 20 - 24, were higher among the households belonging to SCs than that among the STs. Contrary to this, in urban India,

current attendance rates were much higher for STs than that for SCs for both males and females. In urban India, though the current attendance rates among the STs were higher than OBCs for the age group 15 years and above, the rates were lower for the age group 5-14 years. It may further be observed that the school attendance rates, in general, had steadily increased during the period 1999-2000 to 2004-05. The increase had been faster in the rural areas than in the urban areas. Statement 3.14.1 presents the current attendance rates in educational institutions for different social groups at the state/union territory.

3.3 Employed (Work - Force)

3.3.1 *General:* From the data collected through the quinquennial surveys on employment-unemployment, four different estimates of the employment-unemployment indicators can be generated based on the three approaches adopted for classification of persons by activity statuses. These are:

- (i) number of persons employed/ unemployed or in the labour force according to the *usual status* (ps) i.e. by considering usual principal activity only,
- (ii) number of persons employed/ unemployed or in the labour force according to the *usual status* (ps+ss) i.e. by considering usual principal and subsidiary activity together,
- (iii) number of persons employed/ unemployed or in the labour force according to the *current weekly status* approach, and
- (iv) number of person-days employed/ unemployed or in the labour force according to the *current daily status* approach

For the purpose of this report, estimates of the employment-unemployment indicators for various social groups have been generated with respect to the *usual status* (ps+ss) where the activity status of a person for a long reference period of 365 days preceding the date of survey has been determined on the basis of the usual principal activity and usual subsidiary economic activity of the person taken together.

3.3.2 Worker Population Ratios (WPRs) of Various Social Groups

3.3.2.1 The work force according to the *usual status* (ps+ss) includes persons who (a) either worked for a relatively longer part of the 365 days preceding the date of survey and (b) also those persons from among the remaining population who had worked at least for 30 days during the reference period of 365 days preceding the date of survey. The number of persons employed per thousand persons is referred to as work-force participation rate (WFPR) or worker population ratio (WPR). The WPRs for different social groups at the all-India level are presented in Statement 3.15. The WPR for different social groups is given in Figure 6.

3.3.2.2 Statement 3.15 shows that in rural India, proportion of persons employed according to *usual status* (ps+ss) approach was the highest among the males and females belonging to the STs. For rural males, these proportions were 56 per cent for both STs and *others*, 55 per cent for SCs and 54 per cent for OBCs. For rural females, the corresponding proportions were 46 per cent for STs, 33 per cent for both SCs and OBCs and 26 per cent for *others*. In urban India, the proportion of persons employed was the same among all the scheduled categories (38 per cent each) and was about 35 per cent among *others*. For urban males, the WPRs were 55 per cent for both OBCs and *others*, 54 per cent for SCs and 52 per cent for STs. For urban females, the WPR was the highest among the STs (25 per cent). The corresponding proportions among the SCs, OBCs and *others* were 20, 19 and 13 per cent, respectively. The estimates of the WPRs at the state/union territory are presented in Statement 3.15.1.

Statement 3.15: Worker population ratio (WPR) according to usual status (ps+ss) for different social groups

3.3.3 Worker Population Ratios (WPRs) of Various Social Groups over the NSS Rounds

3.3.3.1 It would be of interest to examine whether there had been any change in the employment level for different social groups over the period 1983 to 2004-05. To this end, the proportions of usually employed (*ps+ss*) as estimated from the present survey and those obtained from the earlier NSS 38th (1983), 43rd (1987-88), 50th (1993-94) and 55th (1999-2000) rounds are presented in Statement 3.16. It may be noted that the estimates for *others* category included OBCs in the 38th, 43rd and 50th rounds. It is seen from the statement that for any social group, for males or females, WPR in the rural areas was higher than that in the urban areas in any round. The statement also shows that the proportion of workers declined in 1999-2000 over the previous periods, but increased during the period 2004-05 for all the categories in both the rural and urban areas.

Statement 3.16: Number of persons employed per 1000 persons (WPR) according to the usual status (*ps+ss*) for different social groups during 1983 to 2004-2005

Note: For 38th, 43rd and 50th rounds, no separate category of social group 'OBC' was there and the category 'others' included 'OBC' category also.

3.3.4 Worker Population Ratios (WPRs) Among Persons of Age 15 years and above for Different Level of General Education

3.3.4.1 The WPRs for different levels of general educations among persons of age 15 years and above belonging to different social groups are presented in Statement 3.17 at the all-India. It is seen from statement 3.17 that WPR for rural males are higher for persons belonging to STs (89 per cent) and SCs (86 per cent) than that for OBCs (85 per cent) and *others* (82 per cent). The same feature is observed for the not literate rural males. However, among the educated (i.e., persons with general educational level secondary and above) rural males, WPR for OBCs and *others* was higher (76 per cent each) than that for the STs and SCs (72 per cent each). Among urban males, WPR was the highest for OBCs (79 per cent) and the lowest for *others* (74 per cent). Among the not literate urban males, WPR was the highest among the STs (92 per cent) followed by SCs (85 per cent), OBCs (82 per cent) and *others* (81 per cent). However, among the educated urban males WPR was the highest for *others* (72 per cent) followed by OBCs (71 per cent), STs (67 per cent) and SCs (64 per cent). In both the rural and urban areas, for females, WPR was the highest among the STs followed by SCs, OBCs and *others*. The corresponding estimates for the state/union territory are presented in Statement 3.17.1.

3.4 Unemployed

3.4.1 *General:* As stated in para 3.3.1, for the purpose of this report, the estimates of the unemployed for various social groups have been generated with respect to the *usual status* (ps+ss). The estimate of unemployed according to the *usual status* (ps) gives the number of persons sought or was available for work for a relatively longer period during a reference period of 365 days and approximates to an indicator of the chronically unemployed. However, some of these unemployed might be working in a subsidiary capacity. The estimate of unemployed according to the usual status (ps+ss) gives the number of persons who remained unemployed for a relatively longer period during a reference period of 365 days excluding those employed in a subsidiary capacity during the reference period. The estimates of proportion of unemployed (PU), i.e. number of persons unemployed per thousand persons and unemployment rates (UR) i.e. number of persons unemployed per thousand persons in the labour force, according to the *usual status* (ps+ss) are presented in the Statement 3.18 for different social groups at the all-India level. The estimates of proportion of unemployed (PU) for the states and union territories are presented in Statement 3.15.1 at the end of this chapter.

3.4.2 Proportion of Unemployed (PU) and Unemployment Rates (UR) of Various Social Groups

3.4.2.1 It may be seen from Statement 3.18 that proportion of unemployed (PU) during 2004-05 was higher in the urban areas than in the rural areas of the country for both males and females belonging to the different social groups.

3.4.2.2 *In rural areas:* In rural India, among both males and females, the proportion of chronically unemployed was the highest for the *others* category of persons. Between the two scheduled categories (STs and SCs) of rural households, proportion of chronically unemployed among the males and females was higher among the SCs than among the STs.

3.4.2.3 *In urban areas*: In contrast to the situation observed in the rural areas, among the urban males, the proportion of chronically unemployed was the highest among SCs, followed by that among the *others* category. For urban females, the proportion of chronically unemployed was slightly lower for SCs and STs than for those belonging to the OBCs or *others* category.

3.4.3 Proportion of Unemployed (PU) and Unemployment Rates (UR) of Various Social Groups over the NSS Rounds

3.4.3.1 The estimates of proportion unemployed (PU) in total population, that is, number of unemployed per 1000 persons including those in as well as out of labour force, and unemployment rates (number of unemployed per 1000 persons in the labour force) according to the usual status (ps+ss) for the 38th (1983), 43rd (1987-88), 50th (1993-94), 55th (1999-2000) and 61st (2004 - 05) rounds are presented in the Statement 3.18 for different social groups at the all-India level. During the period 1983 to 2004-05, the proportion of usually unemployed does not show any systematic change for any category of household. For rural males and urban females belonging to the STs and SCs, the proportions seem to have increased over the period 1983 to 2004-05. Between 1999-2000 and 2004-05, the unemployment rate for females in both the rural and urban areas had increased by about 1 percentage point for all categories of households, except for the STs in the rural areas. On the other hand, the unemployment rate for males, between 1999-2000 and 2004-05, appears to have declined, except for the urban SCs for whom the rate increased from 5 per cent in 1999-2000 to about 6 per cent in 2004-05. Figure 7 gives unemployment rate (per 1000) in labour force by sex and social group in India.

Statement 3.18: Number of persons unemployed per 1000 persons (PU) and unemployment rate (UR) (number of persons unemployed per 1000 persons in the labour force) according to usual status (ps+ss) for different social groups during 1983 to 2004-2005

38 th (1983)	4 (15)	6 (29)	-	8 (55)	8 (49)

Note: 1. For 38th, 43rd and 50th rounds, no separate category of social group 'OBC' was there and the category 'others' included 'OBC' category also.

2. Figures in parentheses are the corresponding unemployment rates (UR).

3.4.4 Unemployment Rate (URs) Among Persons of Age 15 years and above for Different Level of General Education

3.4.4.1 The URs for different levels of general educations among persons of age 15 years and above belonging to different social groups are presented in Statement 3.19 at the all-India. It is seen from statement 3.19 that URs are higher among the educated persons (i.e., persons with general educational level secondary and above) than among the not literates for all categories of person. Among the different social groups, the WPR was the highest for *others* for all categories of persons excepting urban males. In both the rural and urban areas, among the educated, the unemployment rate was much higher for females than for males. Among the educated, the UR was the highest among the urban females belonging to OBCs (21 per cent).

3.5 Labour Force

3.5.1 Labour force, or, in other words, the 'economically active' persons refers to the population which supplies or seeks to supply labour for production and therefore, includes both the 'employed' and the 'unemployed'. The labour force participation rate (LFPR), i.e. the number of persons in the labour force per 1000 persons, presented in Statement 3.20 for all-India, has been measured according to the usual status considering both the principal and the subsidiary statuses. The estimates of LFPR for each state/union territory by social group are also presented in Statement 3.15.1.

3.5.2 Statement 3.20 shows that in India, the proportion of economically active persons was the highest among the STs, followed by the SCs, OBCs and *others*. The LFPRs for these groups were 51 per cent, 44 per cent, 43 per cent and 40 per cent, respectively. The relative position of the four social groups, in terms of the descending order of LFPRs, were STs (52 per cent), SCs (45 per cent), OBCs (44 per cent) and *others* (42 per cent) in the rural areas, and SCs, STs (40 per cent each), OBCs (39 per cent) and *others* (37 per cent) in the urban areas. The male-female differences in LFPR are seen to be quite prominent in all the categories of households – the males outnumbered females. The rate is found to be the highest for the males belonging to the rural ST, rural *others* and urban SC categories of households (57 per cent each). Among females, the LFPR was the lowest

for the *others* category of households in the urban areas (15 per cent), succeeded by OBC households in the urban areas (20 per cent). Among rural females, the LFPR was also the lowest for *others* category of households (27 per cent).

Statement 3.19: Unemployment rate (UR) (number of persons unemployed per 1000 persons in the labour force) for persons of age 15 years and above according to usual status (ps+ss) for different general educational level for each social groups

Appendix B

Sample Design and Estimation Procedure

Appendix - B

Sample Design and Estimation Procedure

1 Introduction

1.1 The 61st round (July 2004-June 2005) of NSS was earmarked for survey on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond 5 kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remained inaccessible throughout the year. All the sample first stage units of the district Poonch and Rajouri of Jammu & Kashmir, all rural samples of the district Doda of Jammu & Kashmir, and all rural samples of the district Nicobar of Andaman and Nicobar Islands became casualty and therefore, the district Poonch and Rajouri of Jammu & Kashmir, rural areas of district Doda of Jammu & Kashmir and rural areas of the district Nicobar of Andaman and Nicobar Islands are outside the survey coverage. The survey period was divided into four sub-rounds of three months duration each and an equal number of sample villages/blocks (FSUs), as far as possible, were allotted for survey in each of these four sub-rounds.

2 Sample Design

2.1 A stratified multi-stage sampling design for rural as well as urban areas was adopted for selection of the sample units for the 61st round survey. The first stage units (FSUs) were the census 2001 villages (panchayat wards for Kerala) for rural areas and the NSSO Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USUs) were the households for both rural and urban areas. Hamlet-groups/sub-blocks constituted the intermediate stage whenever these were formed in the sample FSUs.

2.2 *Selection of the first-stage units:* The various steps involved before making the selection of the FSUs are discussed at length in the following few paragraphs before taking up the issue of selection of USUs within a FSU.

2.2.1 *Sampling frame for the first stage units (FSU's):* For rural areas, the list of 2001 census villages constituted the sampling frame for selection of sample FSUs for most of the states. For the rural areas of Kerala, however, the list of panchayat wards was used as the sampling frame for selection of panchayat wards. For the urban areas, the latest lists of UFS blocks constituted the sampling frame for selection of sample FSUs.

2.2.2 *Stratification of the first stage units:* Within each district of a State/UT, two separate basic strata were formed as follows:

1. rural stratum comprising of all rural areas of the district
2. urban stratum comprising of all the urban areas of the district.

However, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of them formed a separate basic stratum and the remaining urban areas of the district was considered as another basic stratum. As per census 2001, there were 27 towns with population 10 lakhs or more at all-India level.

2.2.3 Sub-stratification of the first stage units in rural areas: Within a district, if 'r' number of FSUs were allocated for a rural stratum, a total number of 'r/2' sub-strata were formed within that rural stratum. The villages within the stratum were first arranged in ascending order of population as per the frame and then 'r/2' number of sub-strata was formed in such a way that each sub-stratum comprised a group of villages of the arranged frame having more or less equal population.

2.2.4 Sub-stratification of the first stage units in urban areas: Within a district, if 'u' number of FSUs were allocated for a urban stratum, a total number of 'u/2' sub-strata were formed within that urban stratum. The towns within the stratum, except those with population 10 lakhs or more, were first arranged in ascending order of population as per the frame and then UFS blocks of each town were arranged by IV unit no. × block no. in ascending order of the number. From this arranged frame of UFS blocks of all the towns within the stratum, 'u/2' number of sub-strata was formed in such a way that each sub-stratum had more or less equal number of UFS blocks. For towns with population 10 lakhs or more, the urban blocks were first arranged by IV unit no. × block no. in ascending order of the number and then 'u/2' number of sub-strata was formed in such a way that each sub-stratum had more or less equal number of UFS blocks.

2.2.5 Allocation of FSU's among Strata: At the all-India level, a total number of 12784 FSU's (8124 villages and 4660 urban blocks) was allocated for survey and this was allocated to the different States and UTs in proportion to population as per census 2001 subject to the availability of investigators, ensuring more or less uniform work-load. The State/UT level sample size was then allocated between rural and urban sectors in proportion to population as per *census 2001* with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu etc. should not exceed the rural sample size. A minimum of 8 FSUs has been allocated to each state/UT separately for rural and urban areas. Within each of the rural and urban sectors of a State/UT, the respective sample size was allocated to the different strata in proportion to the stratum population as per census 2001. Allocations at stratum level, both for rural and urban stratum, were adjusted to a multiple of 4 with a minimum sample size of 4.

2.2.6 Selection of first-stage units: From each sub-stratum of the rural stratum of a district, two FSUs were selected with probability proportional to size with replacement (PPSWR), size being the population as per Population Census 2001. From each sub-stratum of the urban stratum of a district, two FSUs were selected with simple random sampling without replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both the rural and urban sectors.

2.3 Selection of Ultimate Stage Units within a FSU: The remaining paragraphs of this sub-section outlines the various steps leading to the actual selection of USUs within a FSU.

2.3.1 *Selection of hamlet-groups/sub-blocks:* Large villages/blocks having approximate present population of 1200 or more were divided into a suitable number of hamlet-groups in the rural areas and sub-blocks in the urban areas as given below:

approximate present population of the sample village/block	number of hamlet-groups / sub-blocks formed
less than 1200	1 @
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

@ number of hamlet-groups / sub-blocks formed = '1' indicates that the whole FSU was considered for listing.

For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur, Doda districts of Jammu and Kashmir and Idukki district of Kerala, the large villages were divided into a suitable number of hamlet-groups as follows:

approximate present population of the sample village	number of hamlet-groups formed
less than 600	1 @
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

@ number of hamlet-groups formed = '1' indicates that the whole FSU was considered for listing.

Hamlet-groups/sub-blocks were formed by more or less equalising populations. Two hamlet-groups/sub-blocks are selected from a large village/UFS block by SRSWOR. Listing and selection of the households were done independently in the two selected hamlet-groups/sub-blocks.

2.3.2 *Sampling frame of households:* All households listed in a village/UFS block where no hamlet-group/sub-block formation was done, or the households listed in the two selected hamlet-groups/sub-blocks of the village/UFS block where hamlet-group/sub-block formation was done, constituted the sampling frame of households.

2.3.3 *Stratification of rural households:* For the employment and un-employment survey of the 61st round, all households listed in the selected village/block/ hamlet-groups/sub-blocks were stratified into three second stage strata (SSS). The three second-stage-strata (SSS) formed in the rural areas were:

- SSS 1: relatively affluent households
- SSS 2: from the remaining households, households having principal earning from non- agricultural activity
- SSS 3: other households

A household was classified as ‘affluent’ if the household (i) owned any of the items like motor car/ jeep/tractor/truck/bus/van/colour TV/DVD/VCP/telephone/fridge/ washing machine, etc. or (ii) one of the household member was a professional such as doctor, advocate etc. or (iii) the household owned 7 hectares or more cultivable land/3.5 hectares or more irrigated land or (iv) owned at least 10 heads cattle or buffaloes.

2.3.4 *Stratification of urban households:* The three second-stage-strata (SSS) formed in the urban areas were:

- SSS 1: households with $MPCE > A$
- SSS 2: households with $MPCE$ such that $B = MPCE = A$
- SSS 3: households with $MPCE < B$

The two cut-off points ‘A’ and ‘B’ were determined at NSS Region level in such a way that top 10% of households had MPCE more than ‘A’ and bottom 30% had MPCE less than ‘B’.

2.3.5 *Selection of households:* For the employment and un-employment survey, a total of 10 households were selected from each sample village/block. In both rural and urban areas, in case no hamlet-group/sub-block formation was done in the village/block, a number of 2, 4 and 4 households were selected from the second stage strata SSS1, SSS2 and SSS3, respectively. In case hamlet-groups/sub-blocks were formed in the village/block, a number of 1, 2 and 2 households were selected respectively from the second stage strata SSS1, SSS2 and SSS3 of each of the hamlet-groups/sub-blocks. The sample households from each of the second stage strata were selected by SRSWOR.

2.4 Number of village/blocks allotted for survey in the NSS 61st round along with the number of village/blocks actually surveyed and number of persons enumerated in respect of employment and unemployment survey are given for different states and union territories in Table 1 at the end of Appendix-B.

3 Estimation Procedure

Procedures for obtaining estimates of aggregates, ratios and their RSEs is briefly indicated below:

3.1 Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU [village (panchayat ward) / block]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb (j = 1, 2 or 3)

k = subscript for k-th sample household under a particular second stage stratum within an FSU/
hg/sb

D = total number of hg's/sb's formed in the sample village (panchayat ward) / block

$D^* = 1$ if $D = 1$

$= D / 2$ for FSUs with $D > 1$

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural sub-stratum (= sum of sizes for all the FSUs of a rural sub-stratum)

z = size of sample village used for selection.

n = number of sample village / block surveyed including zero cases but excluding casualty for a particular sub-sample and sub-stratum.

H = total number of households listed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum;

For ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

3.2 Estimation of aggregates for a particular sub-sample (m) and stratum (s):

3.2.1 Estimate for a sub-stratum in rural areas:

Estimate for j-th second stage stratum,

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

Estimate for sub-stratum (t),

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.2.2 Estimate for a sub-stratum in urban areas:

Estimate for j-th second stage stratum,

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

Estimate for sub-stratum (t),

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.2.3 Estimate for a stratum of a sub-sample (m):

Estimate for stratum s,

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

3.3 Overall Estimate for Aggregates: Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

3.4 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level was obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

3.5 Estimates of Ratios: Let \hat{Y} and \hat{X} be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}.$$

3.6 Estimates of Error: The estimated variances of the above estimates is as follows:

3.6.1 For aggregate \hat{Y} :

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$$

where $V\hat{a}r(\hat{Y}_s)$ are as given below.

3.6.1.1. For strata with PPSWR selection at first stage:

$$V\hat{a}r_{ppswr}(\hat{Y}_s) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{Z_{sti}\hat{Y}_{sti}}{Z_{sti}} - \hat{Y}_{st} \right)^2 \right],$$

where $\hat{Y}_{sti} = \sum_j Y_{stij}$,

$$\hat{Y}_{stij} = D_{sti}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

3.6.1.2 For strata with SRSWOR selection at first stage:

$$V\hat{a}r_{srswor}(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2,$$

where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

3.6.2 For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[\sum_s M\hat{S}_s(\hat{R}) + \sum_{s'} M\hat{S}_{s'}(\hat{R}) \right]$$

where (i) s, s' indicate respectively the strata with PPSWR and SRSWOR selection at first stage,

$$(ii) M\hat{S}_s(\hat{R}) = \sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left[\frac{Z_{st}}{z_{sti}} (\hat{Y}_{sti} - \hat{R}\hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R}\hat{X}_{st}) \right]^2$$

where

$$\hat{Y}_{sti} = \sum_j \hat{Y}_{stij} \quad , \quad \hat{X}_{sti} = \sum_j \hat{X}_{stij} \quad ,$$

$$\hat{Y}_{stij} = D_{sti}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right] ,$$

$$\hat{X}_{stij} = D_{sti}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} x_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} x_{i2jk} \right]$$

$$(iii) M\hat{S}_{s'}(\hat{R}) = \sum_t \frac{1}{4} \left[(\hat{Y}_{s't1} - \hat{Y}_{s't2})^2 + \hat{R}^2 (\hat{X}_{s't1} - \hat{X}_{s't2})^2 - 2\hat{R}(\hat{Y}_{s't1} - \hat{Y}_{s't2})(\hat{X}_{s't1} - \hat{X}_{s't2}) \right]$$

where $\hat{Y}_{s't1}$ and $\hat{Y}_{s't2}$ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

3.7 Estimates of RSE:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

Table 1: Number of villages/ blocks allotted, number of villages/ blocks surveyed and number of persons enumerated in different states and union territories

[3] household characteristics										
1.	household size							6.	social group (code)	
2.	principal industry (NIC-1998)	description:				7.	land owned as on the date of survey (0.000 hectares)			
		code (5-digit)					8.	land possessed as on the date of survey (0.000 hectares)		
3.	principal occupation (NCO-1968)	description:				9.	land cultivated (including orchard and plantation) during July 2003 – June 2004 (0.000 hectares)			
		code (3-digit)				10.	number of members who got work for at least 60 days in 'public works' during last 365 days	male		
4.	household type (code)					11.		female		
5.	religion (code)					12.	monthly household consumer expenditure (Rs) (to be copied from item 40 of block 9)			

Note: 1 acre = 0.4047 hectare, 1 hectare=10,000 sq. metre

Codes for Block 3

item 4: household type:

for rural areas: self-employed in non-agriculture -1, agricultural labour -2, other labour -3, self-employed in agriculture -4, others -9.

for urban areas: self-employed -1, regular wage/salary earning -2, casual labour -3, others -9.

item 5: religion: Hinduism -1, Islam -2, Christianity -3, Sikhism -4, Jainism -5, Buddhism -6, Zoroastrianism -7, others -9.

item 6: social group: scheduled tribe -1, scheduled caste -2, other backward class -3, others -9.

[3.1] indebtedness of rural labour household as on the date of survey (i.e., for households with code 1 in item 5, block 1 along with code 2 or 3 in item 4, block 3)				
srl. no. of loan	nature of loan (code)	source (code)	purpose (code)	amount outstanding including interest as on the date of survey (Rs)
(1)	(2)	(3)	(4)	(5)
total				

Codes for Block 3.1

col. (2): nature of loan: hereditary loan -1, loan contracted in cash -2, loan contracted in kind -3, loan contracted partly in cash and partly in kind -4.

col. (3): source: government -1, co-operative society -2, bank -3, employer/ landlord -4, agricultural/ professional money lender -5, shopkeeper/ trader -6, relatives/ friends -7, others -9.

col. (4): purpose: household consumption: medical expenses -1, educational expenses -2, legal expenses -3, other expenses -4; marriage and other ceremonial expenses -5, purchase of land/ construction of building -6, productive purpose -7, repayment of debt -8, others -9.

Codes for Block 4**col. (3): relation to head:**

self -1, spouse of head -2, married child -3, spouse of married child -4, unmarried child -5, grandchild -6, father/ mother/ father-in-law/ mother-in-law -7, brother/ sister/ brother-in-law/ sister-in-law/ other relatives -8, servants/employees/ other non-relatives -9.

col. (6): marital status:

never married -1, currently married -2, widowed -3, divorced/separated -4.

col. (7): educational level - general:

not literate -01, literate without formal schooling: EGS/ NFEC/ AEC -02, TLC -03, others -04; literate: below primary -05, primary -06, middle -07, secondary -08, higher secondary -10, diploma/certificate course -11, graduate -12, postgraduate and above -13.

col. (8): educational level - technical:

no technical education -01, technical degree in agriculture/ engineering/ technology/ medicine, etc. -02, diploma or certificate (below graduate level) in: agriculture -03, engineering/ technology -04, medicine -05, crafts -06, other subjects -07; diploma or certificate (graduate and above level) in: agriculture -08, engineering/ technology -09, medicine -10, crafts -11, other subjects -12.

col. (9): status of current attendance:

currently not attending:

never attended: school too far -01, to support household income -02, education not considered necessary -03, to attend domestic chores -04, others -05;

ever attended but currently not attending: school too far -11, to support household income -12, education not considered necessary -13, to attend domestic chores -14, others -15;

currently attending in: EGS/ NFEC/ AEC -21, TLC -22, pre-primary (nursery/ Kinder garten, etc.) -23, primary (class I to IV/ V) -24, middle -25, secondary and higher secondary -26, graduate & above in: agriculture -27, engineering/ technology -28, medicine -29, other subjects -30; diploma or certificate (below graduate level) in: agriculture -31, engineering/ technology -32, medicine -33, crafts -34, other subjects -35; diploma or certificate (graduate and above level) in: agriculture -36, engineering/ technology -37, medicine -38, crafts -39, other subjects -40.

col. (10): type of institution: government -1, local body -2, private aided -3, private unaided -4, not known -5.

col. (12): whether receiving/received any vocational training :

yes: receiving formal vocational training -1; received vocational training: formal -2, non-formal: hereditary -3, others -4; did not receive any vocational training -5.

col. (13): field of training :

mechanical engineering trades -01, electrical and electronic engineering trades -02, computer trades -03, civil engineering and building construction related works -04, chemical engineering trades -05, leather related work -06, textile related work -07, catering, nutrition, hotels and restaurant related work -08, artisan/ craftsman/ handicraft and cottage based production work -09, creative arts/ artists -10, agriculture and crop production related skills and food preservation related work -11, non-crop based agricultural and other related activities -12, health and paramedical services related work -13, office and business related work -14, driving and motor mechanic work -15, beautician, hairdressing & related work -16, work related to tour operators/ travel managers -17, photography and related work -18, work related to childcare, nutrition, pre-schools and crèche -19, journalism, mass communication and media related work -20, printing technology related work -21, other -99.

col. (15): source from where degree/diploma/certificate received/to be received:

Industrial Training Institutes (ITIs)/Industrial Training centers (ITCs) -01, School offering vocational courses (Secondary, Higher Secondary level) -02, UGC (first degree level) -03, Polytechnics -04, Community Polytechniques/ Jansiksha Sanstha -05, National Open School -06, Hotel Management Institutes -07, Food craft & Catering Institutes -08, Small Industries Service Institutes/District Industries Centres/Tool Room Centres -09, Fashion Technology Institutes -10, Tailoring, Embroidery and Stitch Craft Institutes -11, Nursing Institutes -12, Rehabilitation/ Physiotherapy /Ophthalmic and Dental Institutes -13, Institutes giving Diploma in Pharmacy -14, Hospital and Medical Training Institutes -15, Nursery Teachers' Training Institutes -16, Institutes offering training for Agricultural Extension -17, Training provided by Carpet Weaving Centers -18, Handloom/ Handicraft Design Training Centers/ KVIC -19, Recognised Motor Driving Schools -20, Institute for Secretariat Practices -21, Recognised Beautician Schools -22, Institutes run by Companies/ Corporations -23, Institutes for Journalism and Mass Communication -24, other institutes -99.

col. (16): whether a beneficiary of the scheme during last 365 days:

yes: annapurna -1, ICDS -2, midday meal -3, food for work -4; no -5.

Codes for Block 5.1

col. (3): **status:**

worked in h.h. enterprise (self-employed): own account worker -11, employer-12, worked as helper in h.h. enterprise (unpaid family worker) -21; worked as regular salaried/ wage employee -31, worked as casual wage labour: in public works -41, in other types of work -51; did not work but was seeking and/or available for work -81, attended educational institution -91, attended domestic duties only -92, attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use -93, rentiers, pensioners, remittance recipients, etc. -94, not able to work due to disability -95, others (including begging, prostitution, etc.) -97.

col. (5): **industry:** 5-digit code as per NIC -98.

col. (6): **occupation:** 3-digit code as per NCO -68.

col. (8): **location of workplace:**

no fixed workplace -10, workplace in rural areas and located in: own dwelling -11, own enterprise/unit/office/shop but outside own dwelling -12, employer's dwelling -13, employer's enterprise/ unit/office/shop but outside employer's dwelling -14, street with fixed location -15, street without fixed location -16, construction site -17, others -19; workplace in urban areas and located in: own dwelling -21, own enterprise/unit/office/shop but outside own dwelling -22, employer's dwelling -23, employer's enterprise/unit/office/shop but outside employer's dwelling -24, street with fixed location -25, street without fixed location -26, construction site -27, others -29.

col. (9): **enterprise type:**

proprietary: male -1, female -2; partnership: with members from same hh. -3, with members from different hh. -4; Government/public sector -5, Public/Private limited company -6, Co-operative societies/trust/other non profit institutions -7, employer's households(i.e., private households employing maid servant, watchman, cook, etc.) -8, others -9.

col. (11): **number of workers in the enterprise:** less than 6 -1, 6 to 9 -2, 10 & above but less than 20 -3, 20 & above -4, not known -9.

col. (12): **type of job contract:** no written job contract -1; written job contract: for 1 year or less -2, more than 1 year to 3 years -3, more than 3 years -4.

col. (14): **availability of social security benefits:**

eligible for: only PF/pension (i.e., GPF, CPF, PPF, pension, etc.) -1, only gratuity -2, only health care & maternity benefits -3, only PF/pension and gratuity -4, only PF/pension and health care & maternity benefits -5, only gratuity and health care & maternity benefits -6, PF/pension, gratuity, health care & maternity benefits -7; not eligible for any of above social security benefits -8.

col. (15): **method of payment:** regular monthly salary -1, regular weekly payment -2, daily payment -3, piece rate payment -4, others -5.

col. (16): **period of seeking/available for work during last 365 days:** sought/available for: less than 1 month -1, 1 to 2 months -2, 3 to 6 months -3, 7 to 9 months -4, 10 to 12 months -5; did not seek/ not available -6.

col. (17): **seeking or available or suitable for the type of occupation:**

3 -digit code as per NCO-68.

col. (18): **whether participated voluntarily without remuneration in production of goods and services:** yes: production of goods in: philanthropic organization/ institution -1, others -2; production of services in: philanthropic organization/ institution -3, others -4; no -5.

col. (19): **industry group:** 3 -digit industry group code as per NIC- 98.

Codes for Block 5.2

col. (3): **status:** codes as in col. 3, block 5.1. (only codes 11 to 51 are applicable here).

col. (5): **industry:** 5-digit code as per NIC-98.

col. (6): **occupation:** 3-digit code as per NCO-68.

col. (7): **location of workplace:** codes as in col. 8, block 5.1.

col. (8): **enterprise type:** codes as in col. 9, block 5.1.

col. (10): **number of workers in the enterprise:** codes as in col. 11, block 5.1.

col. (11): **type of job contract:** codes as in col. 12, block 5.1.

col. (13): **availability of social security benefits:** codes as in col. 14, block 5.1.

col. (14): **method of payment:** codes as in col. 15, block 5.1.

[5.1] usual principal activity particulars of household members																			
srl. no. as in col.1, bl.4	usual principal activity					whether engaged in any work in subsidiary capacity (yes -1, no -2)	for persons with industry groups 012, 014, 015 and divisions 02- 99 in col. 5								for persons of age 5 years and above, period of seeking / available for work during last 365 days (code)	for persons of age below 75 years with codes 81-97 in col. 3, seeking or available for the type of occupation (3-digit NCO-68 code)	for persons with codes 81- 97 in col. 3 along with code 2 in col. 7
